INTRODUCTION.

IN 1599 a certain George Silver published a work entitled "Paradoxes of Defence, wherein is proved the trve grounds of Fight to be in the short auncient weapons, and that the short Sword hath aduantage of the long Sword or long Rapier. And the weakenesse and imperfection of the Rapier-fights displayed. Together with an Admonition to the noble, ancient, victorious, valiant, and most braue nation of Englishmen, to beware of false teachers of Defence, and how they forsake their owne naturall fights: with a briefe commendation of the noble science or exercising of Armes. *By George Siluer Gentleman.* London, Printed for Edvvard Blount. 1599.", dedicated "To the Right Honorable, my Singvlar Good Lord, Robert Earle of Essex and Ewe, Earle Marshall of England, Viscount Hereford, Lord Ferrers of Chartley, Bourchier and Louaine, Maister of the Queenes Maiesties horse, & of the Ordenance, Chancellor of the Vniuersitie of Cambridge, Knight of the most noble order of the Garter, and one of her Highnesse most

43X485

honorable Priuy Counsell." This book is a small 4to volume of viii and 72 pages, containing three woodcuts—a work but little known to any save antiquaries and collectors; yet for all that it is a work which must have possessed considerable value at the time it was written, when duelling and brawling were matters of everyday occurrence.

It was in all probability very shortly afterwards that George Silver wrote "Bref Instructions vpõ my pradoxes of Defence for the true handlyng of all Mann^{r} of weapons together w^{t} the fower grownds & the fower gou^{r}nors w^{ch} gouernours are left out in my pradoxes w^{t}out the knowledge of w^{ch} no Man can fight saf." This, as its title indicates, bears very materially upon the earlier work; so much so, in fact, that the "Paradoxes" without the "Bref Instructions" cannot be considered a complete work in the sense that was evidently intended by the author when he wrote the later part. The "Bref Instructions," however, so far as can be ascertained, were never published; and there is only the MS. to show that this second and completing portion of the work was ever contemplated, much less undertaken by the author. The reason why this was not published will probably never be known, but it must have been a matter of considerable moment to have hindered the completion of a work to which he evidently attached the very greatest importance.

Be that as it may, the MS. of the "Bref Instructions"

in question existed, but remained unknown except to very few people up to about the year 1890, at which time it was discovered in the MS. Department of the British Museum by the late Mr. W. London. He was warned at the Museum to beware of assuming the work to be autograph, but he afterwards stated in a letter to Captain Hutton that he found "the educated but careless and corrupt spelling to be characteristic of Silver," and also that he "considered it to be the oldest English treatise on arms, with the exception of that on the two-hand sword in the Harleian MS. (3542), which dates from the fifteenth century." The "Bref Instructions" consist of thirty-four closely-written pages in very good preservation there being but few places, and those of comparative insignificance, where the handwriting is too faded to be legible; in such cases the context, however, clearly conveys the meaning. It is interesting to note that the MS.* of the "Paradoxes" is also in the Library of the British Museum, having been purchased in 1892 at the sale of the MSS. of Edwin H. Laurence, Lot 603, at a cost of £11.

From the time that the MS. of "Bref Instructions" first became known to Mr. London he appears to have studied it with considerable care, and, although not himself a fencer, he became at once so convinced of the prac-

* MS. 47 pages. No. 34,192. "With 'Epistle Dedecatorie' (ff. 4-6) to Robert [Devereux, 2nd] Earl of Essex. Probably the actual presentation copy, &c." Vide Thimm's "Bibliography of Fencing and Duelling."

tical value to swordsmen of its contents that he made a complete transcript of it—by no means a light undertaking when the caligraphy and spelling are taken into account.

Knowing Captain Alfred Hutton by reputation as one of the most universallyrecognized authorities on all matters respecting the sword and its employment, it occurred to Mr. London after completing the transcript that Captain Hutton was of all others the one best qualified by his practical knowledge and experience to pronounce definitely upon the merits of the MS. He accordingly obtained an introduction, and, after some correspondence, left the transcript for perusal. This occurred in 1894. In due course it was returned, and then only Captain Hutton learned of the rather sudden death of the lender, who it appeared had some short time previously expressed a wish that the transcript might be allowed to remain in Captain Hutton's magnificent collection of fencing and duelling literature.

Thus it was, in 1895, that the "Bref Instructions," by far the more valuable part of George Silver's work, first came under my notice.

Realizing the value of this unpublished work Captain Hutton eventually extracted from Mr. London's transcript of it the material upon which he based a most interesting article in "The Indian Fencing Review" of January, 1897, on "Sword Fighting and Sword Play," constituting in itself a highly practical little work, and likely to prove of much assistance to the infantry officer

desirous of rendering himself as "handy" as possible with his sword at close quarters. More recently still, namely, on September 25, 1897, Captain Hutton gave practical illustration of the "grips" mentioned by him in that article at an exhibition of swordsmanship at the Whitton Park Club, and this display following upon the publication of his paper immediately recalled to my mind the original MS. at the British Museum. I took an early opportunity of consulting this in order to make a closer acquaintance with Silver's later and more important work, which is probably the earliest (in English, at any rate) to teach what is now considered to be the most telling and classic style of fence, viz., "Parry and Riposte."

Much impressed by what I saw and afterwards read, it struck me that a work so peculiarly English, containing so much matter of value to all swordsmen, and to infantry officers in particular, ought not to remain buried, but should rather be published for the use of those who care to read and learn. I therefore determined to complete the work so nearly finished by George Silver, by publishing his MS. of "Bref Instructions." Captain Hutton and Captain Thimm, whom I consulted on this idea, gave me every encouragement, the former most kindly placing at my disposal the transcript made by Mr. London for comparison when my own transcript was completed.

After reading the "Bref Instructions" carefully through in conjunction with the "Paradoxes," I determined to

make the work really complete, as George Silver had evidently intended it to be, by reprinting the "Paradoxes" as nearly as possible in their original form, with the "Bref Instructions" following *literatim et verbatim* in accordance with the MS., and in the same style as the "Paradoxes."

These latter alone contain much to interest the swordsman and the antiquary, but it is not so much to this portion of the work as to the "Bref Instructions" that I desire to direct attention, owing to the remarkably clear and concise manner in which much excellent and serviceable advice upon the handling of the sword is given. Taking into consideration the fact that the weapon recommended by Silver as the most serviceable nearly 300 years ago, though slightly longer and double-edged, was for all practical purposes similar, as regards the blade, to the regulation weapon of to-day, much, if not all, that he has written upon the handling of it in his time may well prove of immense service to those whose lives are at times dependent upon the more or less ready use of their swords.

The fact that so little distinction is now made between the swordsmanship of the duellist and that of the soldier must be incomprehensible to the majority of fencers who have given any consideration to the matter as thus defined. Fencing as now taught throughout Europe is made, and always has been, entirely subservient to the requirements of the duel, with all its attendant etiquette. This distinction is demonstrated by almost any work (whether of

ancient or of modern date) upon the art of sword-fencing, and it is moreover a rule to which there are few exceptions. That this distinction should exist among continental nations cannot be altogether a matter of surprise to us, seeing that the possibility, and even, in certain countries, the probability of a duel is common to both civil and military society alike, but that this method should be adopted in this country, where duelling is altogether a thing of the past, it is not quite so easy to understand.

As a means simply of promoting health, and as a recreation, fencing of the classic schools, whether French or Italian, cannot be too highly commended, and with simply such objects as these in view all the stringent etiquette of the duel and the extreme niceties of the art of fence should be strongly insisted upon in the fencing-room. It is generally admitted that the true basis of all scientific swordsmanship is foil-play—meaning thereby that a man who is fairly expert with the foil will very soon render himself equally so with the sabre; although I do not suggest that a man cannot become a good sabre fencer without the groundwork of foil-fencing—I merely say that he is invariably the better for it.

Now in all probability the only Englishmen to whom swordsmanship can ever be a matter of real necessity are officers in Her Majesty's Navy and Army, of whom it is perhaps the infantry officer rather than any other that should be considered on this account, and who in particular should be clearly instructed in the vast distinction

that exists between the sabre duel and the sabre fight, shorn of all formality and rules, as he would find it on service, whether against a savage or a civilized enemy. The method of instruction as at present authorized for his use is so closely allied to the duelling system as to be practically indistinguishable from it, and to such an extent is this true that the authority responsible for its invention and adoption has seen fit not only to neglect all instruction respecting either the attack or defence of the lower limbs, but has actually gone so far as absolutely to prohibit the attack or defence of any part of the body below the hip. From this, and from many other instances of a more or less similar nature, it is evident beyond dispute that the system and etiquette of the duel have been rigidly adhered to throughout, and this too in a text-book presumably compiled to teach *free sabre fighting*, such as would be encountered on active service. Clearly, in the place of this, a simple system should have been drawn up to teach an officer how to defend himself thoroughly, and how to attack an adversary, without puzzling him with a number of complicated parries and movements, which, even if practicable with a feather-weight duelling sabre, and in the fencing-room, become utterly impossible with the regulation sword, and in a fight of the "rough and tumble" order. Given the present infantry regulation sword of sufficient weight and strength to render it a really serviceable weapon, it would be impossible for any man to put into practice the principles which he is now

supposed to be taught. Why not, therefore, having decided upon the pattern of the regulation sword, have drawn up, or have caused to be drawn up, by one or more of our well-known swordsmen, competent from experience to judge what is really requisite for the purpose, a simple common-sense method of *sword-fighting* suitable for service requirements. This could easily be taught, and devoid of a great deal of that preliminary fencing-room drudgery that so frequently proves to be the real bar to further interest and improvement except in the case of the enthusiast—a system, in fact, of such a description that the advanced "science" of the sword is as far as possible eliminated from it, in order to make way for the simple development of individual coolness and quickness by such means as can without difficulty be practised by officers among themselves at any time.

That such a system can be drawn up, and that there are those who are thoroughly qualified to do it well, there is no doubt—the main point to be borne in mind being from the outset to dismiss all that to any unnecessary extent savours of the duelling school, and then to teach the smallest number and the simplest of parries that will protect a man *from head to foot*, and the *correct and quickest way* of delivering a cut or thrust, coupled with careful instruction in the judicious use of the left hand in defence, which is now and has long been totally ignored. So soon as an officer instructed upon such simple lines as these finds that he can always stop deliberate attacks delivered

without feints (as they might usually be expected), and can make his ripostes with tolerable hope of success, he will at once begin to acquire confidence in himself and in his sword at close quarters, and before long it is not unreasonable to believe that our officers generally would learn properly to understand, and to form a more correct estimate of the value of the weapons they wear as a fighting arm, than with certain almost rare exceptions is at present the case.

The whole matter practically then amounts to this: In order to make a man a fencer it requires an expenditure of much time, patience, and labour on the part of instructor and pupil alike. Why therefore endeavour to achieve so much which at the best can only be done in comparatively few cases, whereas far more practical results can be attained, and that in a much larger number of cases, with infinitely less trouble to all concerned? Surely, if an officer after practical experience found that he could hold his own and render a good account of himself in a hand-to-hand encounter on such lines as already suggested, is it not also reasonable to suppose that this of itself would prove sufficient incentive to him to look into the real "science" of the art of his own accord, and thus eventually to assist, though in a way unintentionally, in the re-establishment of the art of fence in this country upon an even better, and certainly upon a more justifiable basis than that upon which it exists in other countries?

To the infantry officer, then, whether he be a fencer or

not, and perhaps more especially in the latter case, I earnestly recommend a perusal and careful study of the "Bref Instructions;" for I am convinced that a great deal of what he reads therein can be put into practice in sword encounters with highly successful results, especially when they take place against men of savage or barbarian races that Her Majesty's troops are now so frequently sent to face in various quarters of the globe. To him I particularly commend the "Gryps" (cap. 6), and the ripostes that can be made from them—powerful parries, with strong, rapid, and, in the majority of cases, most unlooked-for ripostes, calculated to thoroughly surprise an adversary under almost any circumstances.

As an example: A rushing opponent delivers a sweeping downward blow at the left side of the head or neck. This is met with a high prime parry, and nothing being less likely than a feint under such circumstances, the blow can be met deliberately, or even with a forward movement of the foot, and the assailant's sword-wrist gripped firmly with the left hand under the right as his cut is checked, and almost simultaneously with the formation of the parry. The sword-point is then inclined to the rear over the left shoulder, and the pommel dashed into his face with terrific force, the way being further cleared for it by pressure downwards with the left hand upon the adversary's sword-arm. There are, of course, variations of this, and a man fairly practised in this class of close fighting would be able easily to combine all these movements

almost into a single action; and there is, moreover, a great point in favour of this, inasmuch as it is hardly possible for any defence to be brought against a riposte of this kind in time to prove successful. The more furious and determined the onslaught the simpler and more effective the parry and riposte really become. Silver gives the "gryps" or seizures for use to meet various attacks with ripostes of this description (in many cases with the alternative of using the point), which can most effectively be made from them, and these it is which appear of such practical value as to warrant the publication of them after so many years of oblivion.

It is true that they had gone out of vogue before his time, as is shown by his statement in the "Paradoxes," that "there are now in these dayes no gripes, closes, wrestlings, striking with the hilts, daggers, or bucklers, vsed in Fence-schools," but which at the same time proves them to have been previously recognized, taught, and used, and to have simply been lost sight of as times and weapons changed.

It is sufficiently remarkable that from the very commencement Silver lays great stress upon defence; every argument he makes use of points to the absolute necessity of this in the first instance, and it is only when in safety that he advises counter-attack or riposte.

The soundness of his views in this is amply justified by the fact that the most classic fence of the present day is admitted by schools of fence of all nations to consist of

the correctly-formed parry followed by an instantaneous riposte. He draws particular attention to the fact that for years previous to his time all had been sacrificed to attack, and that defence had been almost if not entirely neglected for the sake of attack by those who made it their business to teach the use of the sword—a fact which he justly condemns. This remains the point of primary importance throughout Silver's work, and forms the very essence of his teaching.

Much that we can read in the "Paradoxes" appears to have been, and doubtless was, written in a feeling of intense irritation against and jealousy of Saviolo (the writer on the rapier)* and his school, but the manner in which he treats his own method of defence and attack in his "Bref Instructions," as opposed to that of the Italian school of his day, clearly proves that he had thoroughly thought out the system which he advocated, and that he had reduced it to a science practically of his own creation, which is remarkable at any rate for much common sense, and in some respects, perhaps, for teaching of a unique kind. His "Bref Instructions" can be still used with great effect, almost without modification, to suit our modern sword, and it is on this account that I have brought them forward, suppressing or adding no-

* "Vincentio Saviolo. His Practise, in two bookes: the first treating of the Use of the Rapier and Dagger, the second of Honour and Honourable Quarrels. 4to, 1595. London: Printed by John Wolfe."

thing, in order to show how wide a scope they still possess for providing a powerful method of defence against all weapons, and some simple though telling ripostes for use in hand-to-hand fighting. Silver, too, fully realized the fact that the hilt or pommel of the sword (or the butt of any arm) constituted an effectively offensive portion of the weapon if properly handled. A few modern authors, who have written upon bayonet fighting, have taught the use of the rifle-butt, but Silver was, so far as I have been able to ascertain, the first writer to attach any importance to the offensive possibilities of the sword-hilt. That in it he indicates a weapon of great power, when used as an auxiliary to the point and edge at close quarters, there can be no doubt, for whereas many a man can do much damage to his opponent after being run through the body, especially if able for the moment to retain the blade in himself (and thus render his enemy momentarily powerless), few if any would be able to stand up against a back-handed blow in the face with the pommel of a regulation sword.

I suggest that sword *fighting* is not taught, and that it ought to be. Fencing should be encouraged to the utmost, but fighting should be regarded, as it was by Silver, as a distinct subject, and of much greater importance in the majority of cases.

My advice to every infantry officer is to study these grips closely, and to thoroughly master the simplicities of sword fighting, and on no account to try to persuade him-

self that an intricate and possibly faulty duelling school will keep his skin whole in hand-to-hand fighting, unless he be already an expert fencer.

CYRIL G. R. MATTHEY.

TO THE RIGHT HONORABLE, MY SINGVLAR GOOD LORD, ROBERT EARLE OF Eſſex and Ewe, Earle Marſhall of England, Viſcount Hereford, Lord Ferrers of Chartley, Bourchier *and Louaine, Maiſter of the Queenes Maieſties horſe*, & of the Ordenance, Chancellor of the Vniuerſitie of Cambridge, *Knight of the moſt noble order of the Garter, and one of her Highneſſe moſt honorable Priuy Counſell.*

FENCING (Right honorable) in this new fangled age, is like our faſhions, euerie daye a change, reſembling the Camelion, who altereth himſelfe into all colours ſaue white: ſo Fencing changeth into all wards ſaue the right. That it is ſo, experience teacheth vs: why it is ſo, I doubt not but your wiſedome doth conceiue. There is nothing permanent that is not true, what can be true that is vncertaine? how can that be certaine, that ſtands vpon vncertain

HYPL

grounds? The mind of man a greedie hunter after truth, finding the ſeeming truth but chaunging, not alwayes one, but alwayes diuerſe, forſakes the ſuppoſed, to find out the aſſured certaintie: and ſearching euery where ſaue where it ſhould, meetes with all ſaue what it would. VVho ſeekes & finds not, ſeekes in vaine; who ſeekes in vaine, muſt if he wil find ſeeke againe: and ſeeke he may againe and againe, yet all in vaine. VVho ſeekes not what he would, as he ſhould, and where he ſhould, as in all other things (Right honourable) ſo in Fencing: the mind deſirous of truth, hunts after it, and hating falſhood, flies from it, and therfore hauing miſſed it once, it aſſayes the ſecond time: if then he thriues not, he tries another way: whẽ that hath failed he aduentures on the third: & if all theſe faile him, yet he neuer faileth to chaunge his weapon, his fight, his ward, if by any meanes he may compaſſe what he moſt affects: for becauſe men deſire to find out a true defence for themſelues in their fight, therefore they ſeeke it diligently, nature hauing taught vs to defend our ſelues, and Art teaching how: and becauſe we miſſe it in one way we chaunge to another. But though

though we often chop and change, turne and returne, from ward to ward, from fight to fight, in this vnconſtant ſearch, yet wee neuer reſt in anie, and that becauſe we neuer find the truth: and therefore we neuer find it, becauſe we neuer ſeeke it in that weapon where it may be found. For, to ſeeke for a true defence in an vntrue weapon, is to angle on the earth for fiſh, and to hunt in the ſea for Hares: truth is ancient though it ſeeme an vpſtart: our forefathers were wiſe, though our age account them fooliſh, valiant though we repute them cowardes: they found out the true defence for their bodies in ſhort weapons by their wiſdome, they defended them ſelues and ſubdued their enemies, with thoſe weapons with their valour. And (Right honorable) if we will haue this true Defence, we muſt ſeeke it where it is, in ſhort Swords, ſhort Staues the halfe Pike, Partiſans, Gleues, or ſuch like weapons of perfect lẽgths, not in long Swords, long Rapiers, nor frog pricking Poiniards: for if there be no certain grounds for Defence, why do they teach it? if there be, why haue they not found it? Not becauſe it is not: to ſay ſo, were to gainesay the truth: but becauſe it is not cer-

Engliſh maiſters of defence, are profitable members in the common wealth, if they teach with ancient Engliſh weapons of true Defence, weight and conuenient length, within the compaſſe of the ſtatures and ſtrength of men to command, becauſe it maketh them ſafe, bold, valiant, hardie, ſtrong and healthfull, and victorious in the warres, ſeruice of their Prince, defence of their friendes and countrey.

But the Rapier in reaſon not to be taught, nor ſuffred to be taught, becauſe it maketh men fearefull and vnſafe in ſingle combat, and weak, & vnſeruiceable in the warres.

taine in thoſe weapons which they teach. To proue this, I haue ſet forth theſe my Paradoxes, different I confeſſe from the maine current of our outlandiſh teachers, but agreeing I am well aſſured to the truth, and tending as I hope to the honor of our Engliſh nation. The reaſon which moued me to aduenture ſo great a taske, is the deſire I haue to bring the truth to light, which hath long time lyen hidden in the caue of contempt, while we like degenerate ſonnes, haue forſaken our foreſathers vertues with their weapons, and haue luſted like men ſicke of a ſtrange ague, after the ſtrange vices and deuiſes of Italian, French and Spaniſh Fencers, litle remembring, that theſe Apiſh toyes could not free Rome from Brennius ſacke, nor Fraunce from King Henrie the fift his conqueſt. To this deſire to find out truth the daughter of time, begotten of Bellona, I was alſo moued, that by it I might remoue the great loſſe of our Engliſh gallants, which we daily ſuffer by theſe imperfect fights, wherein none vndertake the combat, be his cauſe neuer ſo good, his cũning neuer ſo much, his ſtrength and agilitie neuer ſo great, but his vertue was tied to fortune: happie man, happie doale,

doale, kill or be killed is the dreadfull iſſue of this diuelliſh imperfect fight. If that man were now aliue, which beat the Maiſter for the ſcholers fault, becauſe he had no better inſtructed him, theſe Italian Fencers could not eſcape his cenſure, who teach vs Offence, not Defence, and to fight, as Diogenes ſcholers were taught to daunce, to bring their liues to an end by Art. VVas Aiax a coward becauſe he fought with a ſeuen foulded Buckler, or are we mad to go naked into the field to trie our fortunes, not our vertues? VVas Achilles a run-away, who ware that well tempered armour, or are we deſperat, who care for nothing but to fight, and learn like the Pigmeys, to fight with bodkins, or weapons of like defence? Is it valour for a man to go naked againſt his enemie? why then did the Lacedemonians puniſh him as deſperate, whom they rewarded for his vallour with a Lawrell crowne? But that which is moſt ſhamefull, they teach mẽ to butcher one another here at home in peace, wherewith they cannot hurt their enemies abrode in warre. For, your Honour well knowes, that when the battels are ioyned, and come to the charge, there is no roome for them

To this it will be obiected, that in the warres we vſe few Rapiers or none at all, but ſhort Swords. To that I anſwere: Thoſe are inſufficient alſo, for that they haue no

bilts, whereby they are inſufficient in their defence, and eſpecially for the hād, which being ſtroken although with a verie ſmal blow, moſt commonly is the loſſe of a mā, becauſe the force of his hand being taken from him, he is neither able to defend his life, nor greatly to offend his enemy: and againe, ſince the Rapier-fight hath bene taught, for lacke of praĉtiſe they haue loſt the vſe of the blow.

to drawe their Bird-ſpits, and when they haue them, what can they doe with them? can they pierce his Corſlet with the point? can they vnlace his Helmet, vnbuckle his Armour, hew aſunder their Pikes with a *Stocata*, a *reuerſa*, a *Dritta*, a *Stramaſon*, or other ſuch like tẽpeſtuous termes? no, theſe toyes are fit for children, not for men, for ſtragling boyes of the Campe, to murder poultrie, not for men of Honour to trie the battell with their foes. Thus I haue (right Honorable) for the trial of the truth, betweene the ſhort Sword and the long Rapier, for the ſauing of the liues of our Engliſh gallants, who are ſent to certaine death by their vncertaine fights, & for abandoning of that miſchieuous and imperfect weapon, which ſerues to kill our friẽds in peace, but cannot much hurt our foes in warre, haue I at this time giuen forth theſe Paradoxes to the view of the world. And becauſe I knowe ſuch ſtraunge opinions had need of ſtout defence, I humbly craue your Honorable protection, as one in whom the true nobility of our victorious Aunceſtors hath taken vp his reſidence. It will ſute to the reſt of your Honours moſt noble cõplements, to maintaine the defence of their weapons

weapons whoſe vertues you poſſeſſe. It agrees with your Honourable diſpoſition, to receiue with fauour what is preſented with loue. It ſorts with your Lordſhips high authority, to weigh with reaſon, what is fit for marſhall men. It is an vſuall point of your Honor, which winnes your Lordſhip loue in your countrey, to defend the truth in whomſoeuer: and it addeth a ſupply to that vvhich your Lordſhip haue of late begun to your vnſpeakeable honor and our ineſtimable benefite, to reduce the vvearing of ſwordes vvith hilts ouer the hands, to the Romane diſcipline, no longer then they might draw them vnder their armes, or ouer their ſhoulders. In all or any of theſe reſpects, I reſt aſſured that your Lordſhip vvill vouchſafe to receiue vvith fauor and maintaine vvith honour theſe Paradoxes of mine, vvhich if they be ſhrouded vnder ſo ſafe a ſhield, I vvill not doubt but to maintaine vvith reaſon amongſt the vviſe, and proue it by practiſe vpon the ignorant, that there is no certaine defence in the Rapier, and that there is great aduantage in the ſhort Sword againſt the long Rapier, or all maner of Rapiers in generall, of vvhat length ſoeuer. And that the ſhort Staffe

Why ſhould we leaue the hand naked, ſince therby our limmes & liues are defended, our enemies diſcomforted, wounded, and executed? I ſee no reaſon but that the hand ſhould be as well armed and prouided for, as anie other part of the bodie.

hath the vauntage againſt the long Staffe of twelue, foureteene, ſixteene or eighteene foote long, or of what length ſoeuer. And againſt two men vvith their Swordes and Daggers, or two Rapiers, Poiniards & Gantlets, or each of them a caſe of Rapiers : vvhich vvhether I can performe or not, I ſubmit for triall to your Honors martiall cenſure , being at all times readie to make it good, in vvhat maner, and againſt vvhat man ſoeuer it ſhall ſtand vvith your Lordſhips good liking to appoint. And ſo I humbly commend this booke to your Lordſhips vviſedome to peruſe, and your Honour to the Higheſt to protect in all health and happineſſe novve and euer.

Your Honors in all dutie,

George Siluer.

Facſimile of page 8 of the "Paradoxes of Defence."

(Reduced.)

AN ADMONITION
TO THE NOBLE, ANCIENT, VICTORIOVS, VALIANT, AND MOST BRAVE NATION OF ENGLISHMEN.

GEorge *Siluer* hauing the perfect knowledge of all maner of weapõs, and being experiẽced in all maner of fights, thereby perceiuing the great abuſes by the *Italian* Teachers of Offence done vnto them, the great errors, inconueniences, & falſe reſolutions they haue brought them into, haue inforced me, euen of pitie of their moſt lamentable wounds and ſlaughters, & as I verily thinke it my bounden dutie, with all loue and humilitie to admoniſh them to take heed, how they ſubmit themſelues into the hands of *Italian* teachers of Defence, or ſtraungers whatſoeuer; and to beware how they forſake or ſuſpect their owne naturall fight, that they may by caſting off of theſe Italianated, weake, fantaſticall, and moſt diuelliſh and imperfect fights, and by exerciſing of their owne ancient weapons, be reſtored, or atchieue vnto their natural, and moſt manly and victorious fight againe, the dint and force whereof manie

braue nations haue both felt and feared. Our ploughmen haue mightily preuailed againſt them, as alſo againſt Maiſters of Defence both in Schooles and countries, that haue taken vpon thē to ſtand vpon Schoole-trickes and iugling gambolds: whereby it grew to a common ſpeech among the countrie-men, Bring me to a Fencer, I will bring him out of his fence trickes with good downe right blowes, I will make him forget his fence trickes I will warrant him. I ſpeake not againſt Maiſters of Defence indeed, they are to be honoured, nor againſt the Science, it is noble, and in mine opiniō to be preferred next to Diuinitie; for as Diuinitie preſerueth the ſoule from hell and the diuell, ſo doth this noble Science defend the bodie from wounds & ſlaughter. And moreouer, the exerciſing of weapons putteth away aches, griefes, and diſeaſes, it increaſeth ſtrength, and ſharpneth the wits, it giueth a perfect iudgement, it expelleth melancholy, cholericke and euill conceits, it keepeth a man in breath, perfect health, and long life. It is vnto him that hath the perfection thereof, a moſt friendly and comfortable companion when he is alone, hauing but only his weapon about him, it putteth him out of all feare, & in the warres and places of moſt danger it maketh him bold, hardie, and valiant.

And for as much as this noble and moſt mightie nation of Engliſhmen, of their good natures, are alwayes moſt louing, verie credulous, & ready to cheriſh & protect ſtrāgers: yet that through their good natures they neuer more by ſtrangers or falſe teachers may be deceiued, once againe I am moſt humbly to admoniſh thē, or ſuch as ſhal find in themſelues a diſpoſition or deſire to learne their weapons of them, that from henceforth as ſtran-

ſtrangers ſhall take vpon them to come hither to teach this noble & moſt valiant, & victorious nation to fight, that firſt, before they learne of them, they cauſe a ſufficient triall of them to be made, whether the excellencie of their skill be ſuch as they profeſſe or no, the triall to be very requiſite & reaſonable, euen ſuch as I my ſelfe would be contented withall, if I ſhould take vpon me to go in their countrie to teach their nation to fight. And this is the triall: they ſhall play with ſuch weapõs as they profeſſe to teach withall, three bouts apeece with three of the beſt Engliſh Maiſters of Defence, & three bouts apeece with three vnskilful valiant men, and three bouts apeece with three reſolute men half drunke. Then if they can defend thẽſelues againſt theſe maiſters of Defence, and hurt, and go free from the reſt, then are they to be honored, cheriſhed, and allowed for perfect good teachers, what countrey men ſoeuer they be: but if of anie of theſe they take foile, then are they imperfect in their profeſſion, their fight is falſe, & they are falſe teachers, deceiuers and murtherers, and to be puniſhed accordingly, yet no worſe puniſhment vnto them I wiſh, then ſuch as in their triall they ſhall find.

A great fauor to giue them choice of their weapons, becauſe profeſſors of armes ought to be skilfull with all maner of weapõs.

There are foure eſpeciall markes to know the Italian fight is imperfect. & that the Italian teachers and ſetters forth of books of Defence, neuer had the perfection of the true fight.

The firſt marke is, they ſeldome fight in their owne country vnarmed, commonly in this ſort, a paire of Gantlettes vpon their hands, and a good ſhirt of maile vpon their bodies. 2

Yet they perſwade vs that the croſſe of the Rapier without hilt or gantlet is ſufficient.

The ſecõd marke is, that neither the Italians, nor any

of their beſt ſcholers do neuer fight, but they are moſt cõmonly ſore hurt, or one or both of them ſlaine.

The third marke is, they neuer teach their ſcholers, nor ſet downe in their bookes anie perfect lengthes of their weapons, without the which no man can by nature or Art againſt the perfect lẽgth fight ſafe, for being too ſhort, their times are too long, and ſpaces too wide for their defence, and being too long, they wilbe vpon euerie croſſe that ſhall happen to be made, whether it be done by skil or chance, in great danger of death; becauſe the Rapier being too long, the croſſe cannot be vndone in due time, but may be done by going backe with the feete; but that time is alwaies too long to anſwere the time of the hand, therfore euery man ought to haue a weapon according to his owne ſtature: the tall man muſt haue his weapon longer then the man of meane ſtature, or elſe he hath wrong in his defence, & the man of meane ſtature muſt haue his weapon longer then the man of ſmal ſtature, or else he hath wrong in his defence; & the man of ſmal ſtature muſt beware that he feed not himſelf with this vaine cõceipt, that he wil haue his weapon long, to reach as farre as the tall man, for therin he ſhal haue great diſaduantage, both in making of a ſtrong croſſe, and alſo in vncroſſing againe, and in keeping his point from croſſing, and when a croſſe is made vpon him, to defend himſelf, or indanger his enemie, or to redeeme his loſt times. Againe Rapiers longer, then is conuenient to accord with the true ſtatures of men, are alwaies too long or too heauie to keepe their bodies in due time from the croſſe of the light ſhort ſword of perfect length, the which being made by the skilfull out of any of the foure true times, vpon any of the foure chiefe

Acti-

Actions, by reaſon of the vncertaintie & great ſwiftneſſe in any of theſe times, they are in great danger of a blow, or of a thruſt in the hand, arme, head, body, or face, & in euerie true croſſe in the vncroſſing, in great danger of a blow vpon the head, or a full thruſt in the bodie or face: and being taken in that time & place, the firſt mouer in vncroſſing ſpeedeth the Rapier man of imperfect lēgth, whether it be too long, too ſhort or too heauie, and goeth free himſelfe by the direction of his gouernours.

The fourth marke is, the croſſes of their Rapiers for true defence of their hands are imperfect, for the true cariage of the guardant fight, without the which all fights are imperfect.

Of ſixe chiefe cauſes, that many valiant men thinking themſelues by their practiſes to be skilfull in their weapons, are yet manie times in their fight ſore hurt, and manie times ſlaine by men of ſmall skill, or none at all.

THe firſt and chiefeſt cauſe is, the lacke of the foure Gouernours, without the which it is impoſſible to fight ſafe, although a man ſhould practiſe moſt painfully and moſt diligently all the daies of his life. 3

The ſecond cauſe is, the lacke of knowledge in the due obſeruance of the foure Actions, the which we cal bent, ſpent, lying ſpent, and drawing backe: theſe Actions euerie man fighteth vpon, whether they be skilfull or vnskilfull, he that obſerueth them is ſafe, he that obſerueth thē not, is in cōtinuall danger of euerie thruſt that ſhalbe ſtrongly made againſt him.

The third cauſe is, they are vnpractiſed in the foure true times, neither do they know the true times frō the falſe: therefore the true choiſe of their times are moſt commonly taken by chance, and ſeldome otherwiſe.

The fourth cauſe is, they are vnacquainted out of what fight, or in what maner they are to anſwer the variable fight: and therefore becauſe the variable fight is the moſt eaſieſt fight of all other, moſt cōmonly do anſwer the variable fight with the variable fight, which ought neuer to be but in the firſt diſtance, or with the ſhort Sword againſt the long, becauſe if both or one of them ſhall happen to preſe, and that in due time of neither ſide fight be changed, the diſtance, by reason of narrowneſſe of ſpace, is broken, the place is won and loſt of both ſides, then he that thruſteth firſt, ſpeedeth: if both happen to thruſt together, they are both in dāger. Theſe things ſometimes by true times, by change of fights, by chance are auoided.

The fift cauſe is, their weapons are moſt commonly too long to vncroſſe without going backe with the feet.

The ſixt cauſe is, their weapons are moſt commonly too heauie both to defend and offend in due time, & by theſe two laſt cauſes many valiāt mē haue loſt their liues.

What is the cauſe that wiſe men in learning or practiſing their weapons, are deceiued with Italian Fencers.

No fight perfect that is not done in force & true time.

THere are foure cauſes: the firſt, their schoolmaiſters are imperfect: the ſecond is, that whatſoeuer they teach, is both true & falſe; true in their demōſtrations, according with their force & time in gētle play, & in their actions

actions according with true force & time in rough play or fight, falſe: for exãple, there is as much difference betwixt theſe two kind of fights, as there is betwixt the true picture of Sir *Beuis* of *Southampton*, & Sir *Beuis* himſelf, if he were liuing. The third, none cã iudge of the Craft but the Crafts-man; the vnskilfull, be he neuer ſo wiſe, can not truly iudge of his teacher, or skill, the which he learneth, being vnskilful himſelfe. Laſtly, & to confirme for truth all that ſhal be amiſſe, not only in this excellẽt Science of Defence, but in all other excellent ſecrets, moſt commonly the lye beareth as good a ſhew of truth, as truth it ſelfe.

Of the falſe reſolutions and vaine opinions of Rapier-men, and of the danger of death thereby enſuing.

IT is a great queſtion, & eſpecially amõgſt the Rapier-men, who hath the vantage of the thruſter, or of the warder. Some hold ſtrongly, that the warder hath the vantage: others ſay, it is moſt certain that the thruſter hath the vantage. Now when two do happẽ to fight, being both of one mind, that the thruſter hath the vantage, they make all ſhift they can, who ſhall giue the firſt thruſt: as for example, two Captaines at *Southampton* euen as they were going to take ſhipping vpon the key, fel at ſtrife, drew their Rapiers, and preſently, being deſperate, hardie or reſolute, as they call it, with all force and ouer great ſpeed, ran with their rapiers one at the other, & were both ſlaine. Now when two of the contrary opinion ſhall meet and fight, you ſhall ſee verie peaceable warres betweene them: for they verily thinke that he 4

that firſt thruſteth is in great danger of his life, therefore with all ſpeede do put themſelues in ward, or Stocata, the ſureſt gard of all other, as *Vincentio* ſaith, and therevpon they ſtand ſure, ſaying the one to the other, thruſt and thou dare; and ſaith the other, thruſt and thou dare, or ſtrike or thruſt and thou dare, ſaith the other: then ſaith the other, ſtrike or thruſt and thou dare for thy life. Theſe two cunning gentlemen ſtanding long time together, vpon this worthie ward, they both depart in peace, according to the old prouerbe: It is good ſleeping in a whole skinne. Againe if two ſhall fight, the one of opinion, that he that thruſteth hath the vantage, and the other of opinion, that the warder hath the vantage, then most commonly the thruſter being valiant, with all ſpeed thruſteth home, and by reaſon of the time and ſwift motion of his hand, they are moſt commonly with the points of their rapiers, or daggers, or both, one or both of them hurt or ſlaine; becauſe their ſpaces of defence in that kind of fight, are too wide in due time to defend, and the place being wonne, the eye of the Patient by the ſwift motion of the Agents hand, is deceiued. Another reſolution they ſtand ſure vpon for their liues, to kill their enemies, in the which they are moſt commonly ſlaine themſelues: that is this: When they find the point of their enemies rapier out of the right line, they ſay, they may boldly make home a thruſt with a *Paſſata*, the which they obſerue, and do accordingly: but the other hauing a ſhorter time with his hand, as nature manie times teacheth him, ſodainly turneth his wriſt, whereby he meeteth the other in his paſſage iuſt with the point of his rapier in the face or body. And this falſe reſolution hath coſt manie a life.

That

That the cauſe that manie are ſo often ſlaine, and manie ſore hurt in fight with long Rapiers is not by reaſon of their dangerous thruſts, nor cunningneſſe of that Italienated fight, but in the length and vnweildineſſe thereof.

IT is moſt certaine, that men may with ſhort ſwords both ſtrike, thruſt, falſe and double, by reaſon of their diſtance and nimbleneſſe thereof, more dangerouſly then they can with long Rapiers: and yet when two fight with ſhort ſwordes, hauing true fight, there is no hurt done:neither is it poſſible in anie reaſon, that anie hurt ſhould be done betwixt them of either ſide, and this is well knowne to all ſuch as haue the perfection of true fight. By this it plainely appeareth, that the cauſe of the great ſlaughter, and ſundrie hurts done by long Rapiers, conſiſteth not in long Reach, dangerous thruſtes, nor cunningneſſe of the Italian fight, but in the inconuenient length, and vnweildineſſe of their long Rapiers: whereby it commonly falleth out, that in all their Actions appertaining to their defence, they are vnable, in due time to performe,and continually in danger of euerie croſſe, that ſhall happen to be made with their rapier blades, which being done, within the halfe rapier;(vnleſſe both be of one mind with all ſpeed to depart, which ſeldome or neuer happneth betweene men of valiant diſpoſition,)it is impoſſible to vncroſſe, or get out, or to auoid the ſtabbes of the Daggers. And this hath falne out manie times amongſt valiant men at thoſe weapons. 5

Of running and ſtanding faſt in Rapier fight, the runner hath the vantage.

6 IF two valiant men do fight being both cunning in running, & that they both vſe the ſame at one inſtant, their courſe is doubled, the place is wonne of both ſides, and one or both of them will commonly be ſlaine or ſore hurt: and if one of them ſhall runne, and the other ſtand faſt vpon the *Imbrocata* or *Stocata*, or howſoeuer, the place wilbe at one inſtant wonne of one ſide, and gained of the other, and one or both of them wilbe hurt or ſlaine: if both ſhall preſe hard vpon the guard, he that firſt thruſteth home in true place, hurteth the other: & if both thruſt together, they are both hurt: yet ſome vantage the runner hath, becauſe he is an vncertaine marke, and in his motion: the other is a certaine marke, and in a dead motion: and by reaſon thereof manie times the vnskilfull man taketh vantage he knoweth not how, againſt him that lyeth watching vpon his ward or *Stocata* guard.

Of ſtriking and thruſting both together.

7 IT is ſtrongly holden of manie, that if in fight they find their enemy to haue more skill then themſelues, they preſently will continually ſtrike, & thruſt iuſt with him, whereby they will make their fight as good as his, and thereby haue as good aduantage as the other with all his skill: but if their ſwordes be longer then the other, then their aduantage is great; for it is certaine

certaine (ſay they) that an inch will kill a man: but if their ſwordes be much longer then the other, then their aduantage is ſo great, that they wilbe ſure by thruſting and ſtriking iuſt with the other, that they will alwaies hurt him that hath the ſhort ſword, and go cleare themſelues, becauſe they will reach him, when he ſhall not reach them. Theſe men ſpeake like ſuch as talke of Robin Hoode, that neuer ſhot in his bow; for to ſtrike or thruſt iuſt together with a man of skill, lyeth not in the will of the ignorant, becauſe the skilfull man alwaies fighteth vpon the true times, by the which the vnskilfull is ſtill diſappointed of both place and time, and therefore driuen of neceſſitie ſtill to watch the other, when & what he will doe; that is, whether he will ſtrike, thruſt, or falſe: if the vnskilfull ſtrike or thruſt in the time of falſing, therein he neither ſtriketh nor thruſteth iuſt with the other: he may ſaie, he hath ſtroke or thruſt before him, but not iuſt with him, nor to anie good purpoſe; for in the time of falſing, if he ſtrike or thruſt, he ſtriketh or thruſteth too ſhort: for in that time he hath neither time nor place to ſtrike home, and as it is ſaid, the vnskilfull man, that will take vpon him to ſtrike or thruſt iuſt with the skilfull, muſt firſt behold what the man of skil will doe, and when he will doe it, and therfore of neceſſitie is driuen to ſuffer the skilfull man to be the firſt mouer, and entred into his Action, whether it be blow or thruſt, the truth therof in reaſon cannot be denied. Now iudge whether it be poſſible for an vnskilfull man to ſtrike or thruſt iuſt together with a man of skill; but the skilfull man can moſt certainly ſtrike and thruſt iuſt together with the vnskilfull, becauſe the vnskilfull fighteth vpon falſe times, which being too long

to anſwere the true times, the skilfull fighting vpon the true times, although the vnskilfull be the firſt mouer, & entred into his Action, whether it be blow or thruſt; yet the ſhortneſſe of the true times maketh at the pleaſure of the skilfull a iuſt meeting together: in perfect fight two neuer ſtrike or thruſt together, becauſe they neuer ſuffer place nor time to performe it.

Two vnskilfull men manie times by chance ſtrike and thruſte together, chance vnto them, becauſe they know not what they doe, or how it commeth to paſſe: but the reaſons or cauſes be theſe. Sometimes two falſe times meet & make a iuſt time together, & ſometimes a true time and a falſe time meeteth and maketh a iuſt time together, and ſometimes two true times meet and make a iuſt time together. And all this hapneth becauſe the true time and place is vnknowne vnto them.

George Siluer his reſolution vpon that hidden or doubtfull queſtion, who hath the aduantage of the Offender or Defender.

The aduantage is ſtrongly holden of many to be in the offender, yea in ſomuch, that if two minding to offend in their fight, it is thought to be in him that firſt ſtriketh or thruſteth. Others ſtrongly hold opinion that the wardr abſolutely hath ſtill the aduantage, but theſe opinions as they are contrary the one to the other: ſo are they contrarie to true fight, as may well be ſeene by theſe ſhort examples. If the aduantage be in the warder, then it is not good anie time to ſtrike or thruſt: if the aduantage be in the ſtriker or thruſter, then were it a friuolous

a friuolous thing to learne to ward, or at anie time to ſeeke to ward, ſince in warding lieth diſaduantage. Now may it plainly by theſe examples appeare, that if there be anie perfection in fight, that both ſides are deceiued in their opinions, becauſe if the ſtriker or thruſter haue the aduantage, then is the warder ſtill in danger of wounds or death. And againe, if the warder hath the aduantage, then is the ſtriker or thruſter in as great daunger to defend himſelfe againſt the warder, becauſe the warder from his wards, taketh aduantage of the ſtriker or thruſter vpon euerie blow or thruſt, that ſhall be made againſt him. Then thus I conclude, that if there be perfection in the Science of Defence, they are all in their opinons deceiued; and that the truth may appeare for the ſatisfaction of all men, this is my reſolution: there is no aduantage abſolutely, nor diſaduantage in ſtriker, thruſter, or warder: and there is a great aduantage in the ſtriker thruſter & warder: but in this maner, in the perfection of fight the aduantage conſiſteth in fight betweene partie and partie: that is, whoſoeuer winneth or gaineth the place in true pace, ſpace and time, hath the aduantage, whether he be ſtriker, thruſter or warder. And that is my reſolution.

Of Spanish fight with the Rapier.

THe *Spaniard* is now thought to be a better man with his Rapier then is the Italian, Frenchman, high Almaine, or anie other countrie man whatſoeuer, becauſe they in their Rapier-fight ſtand vpon ſo manie intricate trickes, 9

that in all the courſe of a mans life it ſhall be hard to learne them, and if they miſſe in doing the leaſt of them in their fight, they are in danger of death. But the *Spaniard* in his fight, both ſafely to defend himſelfe, and to endanger his enemie, hath but one onely lying, and two wards to learne, wherein a man with ſmall practiſe in a verie ſhort time may become perfect.

This is the maner of Spaniſh fight, they ſtand as braue as they can with their bodies ſtraight vpright, narrow ſpaced, with their feet continually mouing, as if they were in a dance, holding forth their armes and Rapiers verie ſtraight againſt the face or bodies of their enemies: & this is the only lying to accompliſh that kind of fight. And this note, that as long as any man ſhall lie in that maner with his arme, and point of his Rapier ſtraight, it ſhall be impoſſible for his aduerſarie to hurt him, becauſe in that ſtraight holding forth of his arme, which way ſoeuer a blow ſhall be made againſt him, by reaſon that his Rapier hilt lyeth ſo farre before him, he hath but a verie litle way to moue, to make his ward perfect, in this maner. If a blow be made at the right ſide of the head, a verie litle mouing of the hand with the knuckles vpward defendeth that ſide of the head or bodie, and the point being ſtill out ſtraight, greatly endangereth the ſtriker: and ſo likewiſe, if a blow be made at the left ſide of the head, a verie ſmall turning of the wriſt with the knuckles downward, defendeth that ſide of the head and bodie, and the point of the Rapier much indangereth the hand, arme, face or bodie of the ſtriker: and if anie thruſt be made, the wards, by reaſon of the indirections in mouing the feet in maner of dauncing, as aforeſaid, maketh a perfect ward, and ſtill withall the point

point greatly endangereth the other. And thus is the Spaniſh fight perfect: ſo long as you can keepe that order, and ſoone learned, and therefore to be accounted the beſt fight with the Rapier of all other. But note how this Spaniſh fight is perfect, and you ſhall ſee no longer then you can keepe your point ſtraight againſt your aduerſarie: as for example, I haue heard the like ieſt.

There was a cunning Doctor at his firſt going to ſea, being doubtfull that he ſhould be ſea-ſicke, an old woman perceiuing the ſame, ſaid vnto him: Sir, I pray, be of good comfort, I will teach you a tricke to auoid that doubt; here is a fine pibble ſtone, if you pleaſe to accept it, take it with you, and when you be on ſhip-bord, put it in your mouth, and as long as you ſhall keepe the ſame in your mouth, vpon my credit you ſhall neuer vomit: the Doctor beleeued her, and tooke it thankfully at her hands, and when he was at ſea, he began to be ſicke, whereupon he preſently put the ſtone in his mouth, & there kept it ſo long as he poſſibly could, but through his extreme ſickneſſe the ſtone with vomit was caſt out of his mouth: then preſently he remẽbred how the woman had mocked him, and yet her words were true.

Euen ſo a *Spaniard* hauing his Rapier point put by, may receiue a blow on the head, or a cut ouer the face, hand, or arme, or a thruſt in the body or face, and yet his Spaniſh fight perfect, ſo long as he can keepe ſtraight the point of his Rapier againſt the face or body of his aduerſarie: which is as eaſie in that maner of fight to be done, as it was for the Doctor in the extremity of his vomite to keepe the ſtone in his mouth.

Yet one other pretie ieſt more, ſcarce worth the rea-

ding, in commendation of outlandiſh fight. There was an *Italian* teacher of Defence in my time, who was ſo excellent in his fight, that he would haue hit anie Engliſh man with a thruſt, iuſt vpon any button in his doublet, and this was much ſpoken of.

Alſo there was another cunning man in catching of wildgeeſe, he would haue made no more ado, when he had heard them crie, as the maner of wildgeeſe is, flying one after another in rowes, but preſently looking vp, would tell them, if there had bene a doſen, ſixteene, twẽtie, or more, he would haue taken euerie one. And this tale was manie times told by men of good credit, and much maruelled at by the hearers: & the man that wold haue taken the wildgeeſe, was of good credite himſelfe: marie they ſaid, indeed he did neuer take anie, but at anie time when he had looked vp, and ſeene them flie in that maner, he would with all his heart haue taken thẽ, but he could no more tell how to do it, then could the cunning *Italian* Fencer tell how to hit an Engliſhman, with a thruſt iuſt vpon any one of his buttons, when he liſted.

Illuſions for the maintenance of imperfect weapons & falſe fights, to feare or diſcourage the vnskilfull in their weapons, from taking a true courſe or vſe, for attaining to the perfect knowledge of true fight.

10 FIrſt, for the Rapier (ſaith the *Italian*, or falſe teacher) I hold it to be a perfect good weapõ, becauſe the croſſe hindreth not to hold the handle in the hand, to thruſt both far & ſtraight, & to vſe all maner of aduantages in the wards, or

or ſodainly to caſt the ſame at the aduerſarie, but with the Sword you are driuen with all the ſtrength of the hand to hold faſt the handle. And in the warres I would wiſh no friend of mine to weare Swords with hilts, becauſe when they are ſodainly ſet vpon, for haſte they ſet their hands vpon their hilts in ſteed of their handles: in which time it hapneth manie times before they can draw their ſwords, they are ſlaine by their enemies. And for Sword and Buckler fight, it is imperfect, becauſe the buckler blindeth the ſight, neither would I haue anie man lie aloft with his hand aboue his head, to ſtrike ſound blowes. Strong blowes are naught, eſpecially being fet aboue the head, becauſe therein all the face and bodie is diſcouered. Yet I confeſſe, in old times, when blowes were only vſed with ſhort Swords & Bucklers, & back Sword, theſe kind of fights were good & moſt mā-ly, but now in theſe daies fight is altered. Rapiers are lō-ger for aduātage thē ſwords were wōt to be: whē blowes were vſed, men were ſo ſimple in their fight, that they thought him to be a coward, that wold make a thruſt or ſtrike a blow beneath the girdle. Againe, if their weapōs were ſhort, as in times paſt they were, yet fight is better looked into in theſe dayes, than then it was. Who is it in theſe daies ſeeth not that the blow cōpaſſeth round like a wheele, whereby it hath a longer way to go, but the thruſt paſſeth in a ſtraight line, and therefore commeth a nearer way, and done in a ſhorter time thē is the blow, and is more deadly then is the blow? Therefore there is no wiſe man that will ſtrike, vnleſſe he be wearie of his life. It is certaine, that the point for aduantage euerie way in fight is to be vſed, the blow is vtterly naught, and not to be vſed. He that fighteth vpon the

Theſe counterfeit ſhewes are enough to cary the wiſeſt that know not the true fight frō the falſe, out of the right way.

And if their weapons were ſhort, as in times paſt they were, yet they could not thruſt ſafe at body or face, becauſe in gardant fight they fall ouer, or vnder the perfect croſſe of the ſword & to ſtrike beneath the waſte, or at the legges, is great diſaduantage, becauſe the courſe of the blow to the legs is too far, & therby the head, face, & body is diſcouered: and that was the cauſe in old time, that they did not thruſt nor ſtrike at the legs, & not for lacke of skill,

as in theſe daies we imagine. Againe, if a man in thoſe daies ſhold haue fought with a long ſword, they would preſently haue put him into Gobbes Trauers.

blow eſpecially with a ſhort ſword, wilbe ſore hurt or ſlaine. The deuill can ſay no more for the maintenance of errors.

That a blow commeth continually as neare a way as a thruſt, and moſt commonly nearer, ſtronger, more ſwifter, and is ſooner done.

A confutation of their errours.

11 THe blow, by reaſō that it compaſſeth round like a wheele, whereby it hath a longer way to come, as the Italian Fenſer ſaith, & that the thruſt paſſing in a ſtraight line, commeth a nearer way, and therefore is ſooner done then a blow, is not true: these be the proofes.

Let two lie in their perfect ſtrengths and readineſſe, wherein the blades of their Rapiers by the motion of the body, may not be croſſed of either ſide, the one to ſtrike, and the other to thruſt. Then meaſure the diſtance or courſe wherein the hand and hilt paſſeth to finiſh the blow of the one, and the thruſt of the other, and you ſhall find them both by meaſure, in diſtance all one. And let anie man of iudgement being ſeene in the exerciſe of weapons, not being more addicted vnto nouelties of fight, then vnto truth it ſelfe, put in meaſure, and practiſe theſe three fights, variable, open, and guardant, and he ſhall ſee, that whenſoeuer anie man lyeth at the thruſt vpon the variable fight, (where of neceſſitie moſt commonly he lyeth, or otherwiſe not poſſiblie to keepe his Rapier from croſſing at the blow & thruſt, vpon the open or gardant fight,) that the blowes & thruſtes from theſe two fightes, come a nearer way, and a more ſtronger

ſtronger and ſwifter courſe then doth the thruſt, out of the variable fight. And thus for a generall rule, whereſoeuer the Thruſter lyeth, or out of what fight ſoeuer he fighteth, with his Rapier, or Rapier and Dagger, the blow in his courſe commeth as neare, and nearer, and more ſwift and ſtronger then doth the thruſt.

Perfect fight ſtandeth vpon both blow and thruſt, therefore the thruſt is not onely to be vſed.

THat there is no fight perfect without both blow and thruſt: neither is there anie certaine rule to be ſet downe for the vſe of the point onely, theſe be the reaſons: In fight there are manie motions, with the hand, bodie, and feet, and in euerie motion the place of the hand is altered, & becauſe by the motions of the hand, the altering of the places of the hand, the changes of lyings, wards, and breaking of thruſtes, the hand will ſometimes be in place to ſtrike, ſome times to thruſt, ſometimes after a blow to thruſt, and ſometimes after a thruſt to ſtrike, & ſometimes in place where you may ſtrike, and cannot thruſt without loſſe of time, and ſometimes in place where you may thruſt, and cannot ſtrike without loſſe of time, and ſometimes in place where you can neither ſtrike nor thruſt, vnleſſe you fight vpon both blow and thruſt, nor able to defend your ſelfe by ward or going backe, becauſe your ſpace wilbe too wide, and your diſtance loſt. And ſometimes when you haue made a thruſt, a ward or breaking is taken in ſuch ſort with the Dagger or blade of the Sword, that you cã neither thruſt againe, nor defend your ſelfe vnleſſe you doſtrike, which 12

This in truth cannot be denied.

you may ſoundly doe, and go free, and ſometimes when you ſtrike, a ward wilbetaken in ſuch ſort, that you cannot ſtrike againe, nor defend your ſelfe, vnleſſe you thruſt, which you may ſafely doe and goe free. So to conclude, there is no perfection in the true fight, without both blow and thruſt, nor certaine rule to be ſet downe for the point onely.

That the blow is more dangerous and deadly in fight, then a thruſt, for proofe thereof to be made according with Art, an Englishman holdeth argument againſt an Italian.

Italian.

13 Hich is more dangerous or deadly in fight of a blow or a thruſt?

Englishman.

This queſtion is not propounded according to art, becauſe there is no fight perfect without both blow and thruſt.

Italian.

Let it be ſo, yet opinions are otherwiſe holden, that the thruſt is onely to be vſed, becauſe it commeth a nearer way, and is more dangerous and deadly, for theſe reaſons: firſt the blow compaſſeth round like a wheele, but the thruſt paſſeth in a ſtraight line, therfore the blow by reaſon of the compaſſe, hath a longer way to go then the thruſt, & is therefore longer in doing, but the thruſt paſſeth in a ſtraight line, therfore hath ſhorter way to go thē hath the blow, & is therfore done in a ſhorter time, & is therfore much better then the blow, & more dangerous and deadly, becauſe if a thruſt do hit the face or bodie, it indangereth life, and moſt commonly death enſueth: but if the blow hit the bodie, it is not ſo dāgerous.

Englishman.

Englishman.

Let your opiniõs be what they wil, but that the thruſt cõmeth a nearer way, & is ſooner done then the blow, is not true: & for proofe thereof reade the twelfth Paradox. And now will I ſet downe probable reaſons, that the blow is better then the thruſt, and more dangerous and deadly. Firſt, the blow commeth as neare a way, & moſt cõmonly nearer then doth the thruſt, & is therfore done in a ſhorter time then is the thruſt: therfore in reſpect of time, wherupon ſtãdeth the perfection of fight, the blow is much better then the thruſt. Againe, the force of the thruſt paſſeth ſtraight, therefore any croſſe being indirectly made, the force of a child may put it by: but the force of a blow paſſeth indirectly, therefore must be directly warded in the counterchecke of his force: which cãnot be done but by the cõuenient ſtrength of a man, & with true croſſe in true time, or elſe will not ſafely defẽd him: and is therfore much better, & more dãgerous thẽ the thruſt, and againe, the thruſt being made through the hand, arme, or leg, or in many places of the body and face, are not deadly, neither are they maimes, or loſſe of limmes or life, neither is he much hindred for the time in his fight, as long as the bloud is hot: for example.

The blow more dangerous then the thruſt.

I haue knowne a Gẽtlemã hurt in Rapier fight, in nine or ten places through the bodie, armes, and legges, and yet hath continued in his fight, & afterward hath ſlaine the other, and come home and hath bene cured of all his woũds without maime, & is yet liuing. But the blow being ſtrõgly made, taketh ſomtimes cleane away the hand from the arme, hath manie times bene ſeene. Againe, a full blow vpon the head or face with a ſhort ſharpe Sword, is moſt commonly death. A full blow vpon the

The blow cutteth off the hand, the arme, the leg, and ſometimes the head.

necke, ſhoulder, arme, or legge, indangereth life, cutteth off the veines, muſcles, and ſinewes, periſheth the bones: theſe wounds made by the blow, in reſpect of perfect healing, are the loſſe of limmes, or maimes incurable for euer.

And yet more for the blow: a ful blow vpon the head, face, arme, leg, or legs, is death, or the partie so wounded in the mercie of him that ſhall ſo wound him. For what man ſhall be able long in fight to ſtand vp, either to reuenge, or defend himſelfe, hauing the veines, muſcles, and ſinewes of his hand, arme, or leg cleane cut aſunder? or being diſmembred by ſuch wound vpon the face or head, but ſhall be enforced therby, and through the loſſe of bloud, the other a litle dallying with him, to yeeld himſelf, or leaue his life in his mercie?

He that giueth the firſt wound with a ſtrong blow, commaundeth the life of the other.

And for plainer deciding this cõtrouerſie betweene the blow and the thruſt, conſider this ſhort note. The blow commeth manie wayes, the thruſt doth not ſo. The blow commeth a nearer way then a thruſt moſt commonly, and is therefore ſooner done. The blow requireth the ſtrength of a man to be warded; but the thruſt may be put by, by the force of a child. A blow vpon the hand, arme, or legge is a maime incurable; but a thruſt in the hand, arme, or legge is to be recouered. The blow hath manie parts to wound, and in euerie of them commaundeth the life; but the thruſt hath but a few, as the bodie or face, and not in euerie part of them neither.

Of

Of the difference betwixt the true fight & the falſe: wherin conſiſteth (the Principles being had with the direction of the foure Gouernors) the whole perfection of fight with all maner of weapons.

THe true fights be theſe: whatſoeuer is done with the hand before the foot or feet is true fight. The falſe fights be theſe: whatſoeuer is done with the foot or feet before the hand, is falſe, becauſe the hand is ſwifter then the foot, the foot or feet being a ſlower mouer then the hand: the hand in that maner of fight is tied to the time of the foot or feet, and being tied thereto, hath loſt his freedome, and is made thereby as ſlow in his motions as the foot or feet: and therfor that fight is falſe. 14

Of euill orders or cuſtomes in our English Fẽce-ſchooles, & of the old or ancient teaching of weapons, & things very neceſſarie to be continued for the auoiding of errors, and reuiuing and continuance of our ancient vveapons, and moſt victorious fight againe.

THere is in my opiniõ in our Fence-ſchooles an euill order or cuſtome in theſe dayes vſed, the which, if it might ſtand with the good liking of our Maiſters of Defence, I thinke it neceſſarie to be left: for as long as it is vſed, it ſhall be hard to make a good Scholler. 15

That is this, at the ſingle Sword, Sword and Dagger, & Sword and Buckler, they forbid the thruſt, & at the ſingle Rapier, and Rapier & Dagger, they forbid the blow. Either they are both together beſt, or the thruſt altogether beſt, or the blow altogether beſt. If the thruſt be beſt, why do we not vſe it at the ſingle Sword, Sword & Dagger, & Sword and Buckler. If the blow be beſt, why do we not vſe it at the ſingle Rapier, Rapier & Poinyard? But knowing by the Art of Armes, that no fight is perfect without both blow and thruſt, why do we not vſe and teach both blow and thruſt? But howſoeuer this we dayly ſee, that whē two meet in fight, whether they haue skill or none, vnleſſe ſuch as haue tied thēſelues to that boyiſh, *Italian*, weake, imperfect fight, they both ſtrike and thruſt, and how ſhall he then do, that being much taught in ſchoole, neuer learned to ſtrike, nor how to defend a ſtrong blow? & how ſhall he thē do, that being brought vp in Fēce-ſchoole, that neuer learned to thruſt with the ſingle Sword, Sword and Dagger, and Sword and Buckler, nor how at theſe weapōs to breake a thruſt? Surely, I thinke a downe right fellow, that neuer came in ſchoole, vſing ſuch skill as nature yeeldeth out of his courage, ſtrength, and agilitie, with good downe right blowes and thrufts among, as ſhall beſt frame in his hands, ſhold put one of theſe imperfect ſchollers greatly to his ſhifts. Beſides, there are now in theſe dayes no gripes, cloſes, wreſtlings, ſtriking with the hilts, daggers, or bucklers, vſed in Fence-ſchooles. Our ploughmen by nature wil do all theſe things with great ſtrēgth & agility: but the Schooleman is altogether vnacquainted with theſe things. He being faſt tyed to ſuch ſchoolplay as he hath learned, hath loſt thereby the benefite

of

of nature, and the plowman is now by nature without art a farre better man then he. Therefore in my opinion, as long as we barre anie maner of play in ſchoole, we ſhall hardly make a good ſcholler: there is no maner of teaching comparable to the old ancient teaching, that is, firſt their quarters, then their wardes, blowes, thruſts, and breaking of thruſtes, then their Cloſes and Gripes, ſtriking with the hilts, Daggers, Bucklers, Wraſtlings, ſtriking with the foote or knee in the Coddes, and all theſe are ſafely defended in learning perfectly of the Gripes. And this is the ancient teaching, the perfecteſt & moſt beſt teaching; and without this teaching, there ſhall neuer ſcholler be made able, doe his vttermoſt, nor fight ſafe. Againe their ſwordes in ſchooles are too long by almoſt halfe a foote to vncroſſe, without going backe with the feete, within diſtance or perfectly to ſtrike or thruſt within the halfe or quarter ſword. And in ſeruing of the Prince, when men do meet together in publique fight, are vtterly naught and vnſeruiceable. The beſt lengthes for perfect teaching of the true fight to be vſed and continued in Fence ſchooles, to accord with the true ſtatures of all men, are theſe. The blade to be a yard and an inch for meane ſtatures, and for men of tall ſtatures, a yard and three or foure inches, and no more. And I would haue the Rapier continued in ſchooles, alwaies readie for ſuch as ſhall thinke themſelues cunning, or ſhall haue delight to play with that imperfect weapon. Prouided alwaies, that the Schoolemaiſter or Vſher play with him with his ſhort Sword, plying him with all maner of fight according to the true art: this being continued the truth ſhall flouriſh, the lye ſhalbe beaten downe, and all nations not ha-

In the warres there is no obſervation of Stoccatas, Imbrocatas, times, nor anſwers.

Long weapons imperfect.

uing the true ſcience, ſhall come with all gladneſſe to the valiant and moſt braue Engliſh maisters of Defence to learne the true fight for their defence.

The grounds or Principles of true fight with all maner of weapons.

16

FIrſt Iudgement, Lyings, Diſtance, Direction, Paſe, Space, Place, Time, Indirection, Motion, Action, generall and continuall Motion, Progreſſion, Regreſſion, Trauerſing, and Treading of groundes, Blowes, Thruſtes, Faulſes, Doubles, Slipes, Wardes, breakings of Thruſts, Cloſings, Gripes, & Wraſtlings, Guardant fight, Open fight, Variable fight, and Cloſe fight, and foure Gouernours.

The wardes of all maner of weapons.

17

ALl ſingle weapons haue foure wardes, and all double weapons haue eight wardes. The ſingle ſword hath two with the point vp, and two with the point downe. The Staffe and all maner of weapons to be vſed with both handes haue the like.

The Sword and Buckler, and Sword and Dagger are double weapons, and haue eight wardes, two with the point vp, and two with the point downe, and two for the legges with the point downe, the point to be caried for both ſides of the legges, with the knuckles downeward, and two wardes with the Dagger or Buckler for the head. The Forreſt bill is a double weapon by reaſon of

of the head, and therefore hath eight wardes, foure with the Staffe, foure with the head, foure of them to be vſed as with the ſtaffe, and the other foure with the head, the one vp, the other downe, and the other ſidewaies.

The names and numbers of times appertaining vnto fight both true and falſe.

Here are eight times, whereof foure are true, and foure are falſe: the true times be theſe. 18

The time of the hand.
The time of the hand and bodie.
The time of the hand, bodie and foote.
The time of the hand, bodie and feete.

The falſe times be theſe.

The time of the foote.
The time of the foote and bodie.
The time of the foote, bodie and hand.
The time of the feete, bodie and hand.

Thus haue I thought good to ſeparate and make knowne the true times from the falſe, with the true wardes thereto belonging, that thereby the rather in practiſing of weapons, a true courſe may be taken for the auoiding of errours and euill cuſtomes, and ſpeedie attaining of good habit or perfect being in the true vſe and knowledge of all maner of weapons.

Of the length of weapons, and how euerie man may fit himſelfe in the perfect length of his weapon, according to his owne ſtature, with briefe reaſons wherefore they ought to be ſo.

19 TO know the perfect length of your Sword, you ſhall ſtand with your ſword and dagger drawn, as you ſee this picture, keeping out ſtraight your dagger arme, drawinge backe your ſword as far as conueniently you can, not opening the elbow ioynt of your ſword arme: and looke what you can draw within your dagger, that is the iuſt length of your ſword, to be made according to your owne ſtature.

If the ſword be longer, you can hardly vncroſſe without going backe with your feet. If ſhorter, thē you can hardly make a true croſſe without putting in of your feet, the which times are too long to anſwer the time of the hand.

The like reaſons for the ſhort ſtaffe, halfe Pike, Forreſt bill, Partiſan, or Gleue, or ſuch like weapons of perfect length.

The perfect length of your two hand ſword is, the blade to be the length of the blade of your ſingle ſword.

To know the perfect length of your ſhort ſtaffe, or half Pike, Forreſt bil, Partiſan, or Gleue, or ſuch like weapons of vantage and perfect lengths, you ſhall ſtand vpright, holding the ſtaffe vpright cloſe by your body, with your left hād, reaching with your right hand your ſtaffe as high as you can, and then allow to that length a ſpace to ſet both your hands, when you come to fight, wherein you may conueniently ſtrike, thruſt, and ward, & that is the iuſt length to be made according to your ſtature. And this note, that theſe lengths will commonly fall out to be eight or nine foot long, and will fit, although not iuſt, the ſtatures of all men, without any hindrance at all vnto them in their fight, becauſe in any weapon wherin the hands may be remoued, and at libertie, to make the weapon lōger or ſhorter in fight at his pleaſure, a foot of the ſtaffe behind the backmoſt hand doth no harme. And wherfore theſe weapons ought to be of the lengths aforeſaid, and no ſhorter, theſe are the reaſons: If they ſhould be ſhorter, then the long ſtaffe, Morris Pike, and ſuch like weapons ouer and aboue the perfect length, ſhould haue great vantage againſt them, becauſe he may come boldly and ſafe without anie gard or ward, to the place where he may thruſt home, and at euery thruſt put him in danger of his life: but if theſe weapons be of their perfect lengths, then can the long ſtaffe, the Morris Pike, or anie other longer weapon ly nowhere in true ſpace, but ſhall be ſtill within compaſſe of the croſſe, to croſſe and vncroſſe, wherby he may ſafely paſſe home to the place, where he may ſtrike or thruſt him that hath the long weapon, in the head, face, or body at his pleaſure.

Of the lengths of the Battel axe, Halbard, or blacke Bill, or ſuch like vveapons of weight, appertaining vnto gard or battell.

20 IN anie of theſe weapons there needeth no iuſt length, but commonly they are, or ought to be fiue or ſixe foot long, & may not well be vſed much longer, becauſe of their weights: and being weapons for the warres or battell, when men are ioyned cloſe together, may thruſt, & ſtrike ſound blowes, with great force both ſtrong and quicke: and finally for the iuſt lengths of all other ſhorter or longer weapons to be gouerned with both hands, there is none: neither is there anie certaine lengthes in anie maner of weapons to be vſed with one hand, ouer or vnder the iuſt length of the ſingle ſword.

Thus endeth the length of weapons.

Of the vantages of weapons in their kinds, places, & times, both in priuate and publike fight.

21 FIrſt I will begin with the worſt weapon, an imperfect and inſufficient weapon, and not worth the ſpeaking of; but now being highly eſteemed, therefore not to be left vnremembred; that is, the ſingle Rapier, and Rapier and Poiniard.

The ſingle Sword hath the vantage againſt the ſingle Rapier.

The Sword and Dagger hath the vantage againſt the Rapier and Poiniard.

The

The Sword & Target hath aduãtage againſt the Sword and Dagger, or Rapier and Poiniard.

The Sword and Buckler hath aduantage againſt the Sword and Target, the Sword and Dagger, or Rapier and Poiniard.

The two hand Sword, hath the vantage againſt the Sword and Target, the Sword and Buckler, the Sword and Dagger, or Rapier and Poiniard.

The Battel-axe, the Halbard, the Blacke-bill, or ſuch like weapons of weight, appertaining vnto guard or battell, are all one in fight, and haue aduantage againſt the two hand Sword, the Sword and Buckler, the Sword and Target, the Sword & dagger, or the Rapier & Poiniard.

The ſhort ſtaffe or halfe Pike, Forreſt-bill, Partiſan, or Gleue, or ſuch like weapons of perfect length, haue the vantage againſt the Battel-axe, the Halbard, the Blacke-bill, the two hand ſword, the Sword and Target, and are too hard for two Swords and Daggers, or two Rapiers and Poiniards with Gantlets, and for the long ſtaffe and Morris Pike.

The long Staffe, Morris Pike, or Iauelin, or ſuch like weapons aboue the perfect length, haue aduantage againſt all maner of weapons, the ſhort ſtaffe, Welch hooke, Partiſan, or Gleue, or ſuch like weapons of vantage excepted: yet too weake for two Swords and Daggers or two Swords and Bucklers, or two Rapiers and Poiniards with Gantlets, becauſe they are too long to thruſt, ſtrike, and turne ſpeedily: and by reaſon of the large diſtance, one of the Sword and Dagger-men will get behind him.

The Welch hooke or Forreſt bill, hath aduantage againſt all maner of weapons whatſoeuer.

Yet vnderſtand, that in battels, and where varietie of weapons be, amongſt multitudes of men and horſes, the Sword and Target, the two hand Sword, the Battel-axe, the Blacke-bill, and Halbard, are better weapons, and more dangerous in their offence and forces, then is the Sword and Buckler, ſhort ſtaffe, long ſtaffe, or Forreſt bill. The Sword and Target leadeth vpon Shot, and in troupes defendeth thruſts and blowes giuen by battel-axe, Halbards, Blacke-bill, or two hand ſwords, far better then can the Sword and Buckler.

The Morris Pike defendeth the battell from both horſe and man, much better then can the ſhort ſtaffe, long ſtaffe, or Forreſt bill. Againe, the Battel-axe, the Halbard, the Blacke bill, the two hand ſword, and Sword & Target, amongſt armed men and troopes, when men are come together, by reaſon of their weights, ſhortneſſe, and great forces, do much more offend the enemie, & are then much better weapons, then is the ſhort ſtaffe, the long Staffe, or Forreſt bill.

Of the inſufficiencie and diſaduantages of the Rapiers-fight in Battell.

22 FOr the ſingle Rapier, or Rapier & Poiniard, they are imperfect & inſufficient weapons: and eſpecially in the ſeruice of the Prince, when men ſhall ioyne together, what ſeruice can a ſouldier do with a Rapier, a childiſh toy wherwith a man can do nothing but thruſt, nor that neither, by reaſon of the length, and in euerie mouing when blowes are a dealing, for lacke of a hilt is in daunger to haue his hand or arme cut off, or his head clouen?

clouen . And for Wardes and Gripes, they haue none, neither can any of theſe fine Rapier men, for lacke of vſe, tell howe to ſtrike a ſound blow.

Of the vantages and ſufficiencie of the short Sword fight in battell.

THe ſhort Sword, and Sword and Dagger, 23
are perfect good weapons , and eſpecially in ſeruice of the Prince. What a braue weapon is a ſhort ſharpe light Sword, to carie, to draw, to be nimble withall, to ſtrike, to cut, to thruſt both ſtrong and quicke. And what a goodly defence is a ſtrong ſingle hilt, when men are cluſtering and hurling together , eſpecially where varietie of weapons be , in their motions to defend the hand , head, face, and bodies , from blowes, that ſhalbe giuen ſometimes with Swordes, ſometimes with two handed Swordes, battell Axe, Halbardes , or blacke Billes , and ſometimes men ſhalbe ſo neare together , that they ſhall haue no ſpace, ſcarce to vſe the blades of their Swordes belowe their waſtes, then their hilts (their handes being aloft) defendeth from the blowes, their handes, armes, heads, faces, and bodies : then they lay on, hauing the vſe of blowes and Gripes , by force of their armes with their hilts, ſtrong blowes, at the head , face , armes , bodies , and ſhoulders, and manie times in hurling together , ſcope is giuen to turne downe their points, with violent thruſts at their faces, and bodies, by reaſon of the ſhortneſſe of their blades, to the mightie annoyance , diſcomfort , and great deſtruction of their enimies. One valiant man with a Sword in his hand , will doe better ſeruice , then ten *Italians*, or Italienated with the Rapiers.

That all maner of double weapons, or weapons to be vſed with both handes, haue aduantage againſt the ſingle Rapier or ſingle Sword, there is no queſtion to be made.

That the Sword and Buckler hath the vantage againſt the Sword and Dagger.

24 THe Dagger is an imperfect ward, although borne out ſtraight, to make the Space narrow, whereby by a litle mouing of the hand, may be ſufficient to ſaue both ſides of the head, or to breake the thruſt from the face or body, yet for lacke of the circumference his hand will lie too high or too low, or too weake, to defend both blow and thruſt: if he lye ſtraight with narrow ſpace, which is beſt to breake the thruſt, then he lieth too weake, and too lowe to defend his head from a ſtrong blow: if he lye high, that is ſtrong to defend his head, but then his ſpace wilbe too wide to breake the thruſt from his bodie. The Dagger ſerueth well at length to put by a thruſt, and at the halfe Sword to croſſe the Sword blade, to driue out the Agent, and put him in danger of his life, and ſafely in anie of theſe two actions to defend himſelfe. But the Buckler, by reaſon of his circumference and weight, being well caried, defendeth ſafely in all times and places, whether it be at the point, halfe Sword, the head, bodie, and face, from all maner of blowes and thruſtes whatſoeuer, yet I haue heard manie hold opinion, that the Sword and Dagger hath aduantage of the Sword and Buckler, at the Cloſe, by reaſon of the length and point of the Dagger: and at the point

point of the Sword, they can better ſee to ward then with a Buckler. But I neuer knew anie, that wanne the Cloſe with the Dagger vpon the Sword and Budkler, but did wiſh himſelfe out againe: for diſtance being broken, iudgement faileth, for lacke of time to iudge, and the eie is deceiued by the ſwift motion of the hand, and for lacke of true Space with the dagger hand, which cannot be otherwiſe, for lacke of the circumference to defend both blow and thruſt, it is impoſſible for lacke ot true Space in iuſt time, the agent hauing gotten the true place, to defend one thruſt or blow of an hundred. And it is moſt certaine, whoſoeuer cloſeth with Sword and Dagger, againſt the Sword and Buckler, is in great danger to be ſlaine. Likewiſe at the point within diſtance, if he ſtand to defend both blow and thruſt with his Dagger, for lacke of true ſpace and diſtance, if he had the beſt eye of anie man, and could ſee perfectly, which way the thruſt or blow commeth, and when it commeth, as it is not to be denied but he may, yet his ſpace being too large, it helpeth him nothing, becauſe one mans hand being as ſwift as another mans hand, both being within diſtance, he that ſtriketh or thruſteth, hurteth the warder: the reaſon is this: the Agent being in the firſt motion although in his offence, further to go then the warder to defend, yet the warders ſpace being too large, the blow or thruſt wilbe performed home, before the warder can come to the true plaee to defend himſelfe, and although the warder doe perfectly ſee the blow or thruſt comming, ſo ſhall he ſee his owne ward ſo farre from the true place of his defence, that although he doe at that inſtant time, plainly ſee the blow or thruſt comming, it ſhalbe impoſſible for him to recouer the

true place of his ward, till he be wounded. But let the warder with the dagger ſay, that it is not true which I haue ſaid, for as he hath eies to behold the blow or thruſt cõming, ſo hath he as good time to defend himſelf. Herein he ſhal find himſelf deceiued to; this is the reaſon: the hand is the ſwifteſt motion, the foot is the ſloweſt, without diſtance the hand is tied to the motion of the feet, wherby the time of the hand is made as ſlow as the foot, becauſe thereby we redeeme euerie time loſt vpon his comming by the ſlow motion of the foot, & haue time therby to iudge, whẽ & how he can performe any actiõ whatſoeuer, and ſo haue we the time of the hand to the time of the feet. Now is the hãd in his owne courſe more ſwifter then the foot or eye, therfore within diſtance the eye is deceiued, & iudgement is loſt; and that is another cauſe that the warder with the dagger, although he haue perfect eyes, is ſtil within diſtance deceiued. For proofe that the hand is more ſwifter then the eye, & thereby deceiueth the eyes: let two ſtand within diſtance, & let one of thẽ ſtand ſtill to defend himſelf, & let the other floriſh & falſe with his hand, and he ſhall continually with the ſwift motions of his hand, deceiue the eyes of him that ſtandeth watching to defend himſelfe, & ſhal continually ſtrike him in diuerſe places with his hand. Againe, take this for an example, that the eyes by ſwift motions are deceiued: turne a turne-wheele ſwift, & you ſhall not be able to diſcerne with your beſt eies how many ſpokes be in the wheele, no nor whether there be any ſpokes at all, or whereof the wheele is made, and yet you ſee when the wheele ſtandeth ſtill there is a large diſtance betweene euerie ſpoke. He that will not beleeue that the ſwift motion of the hand in fight will deceiue the eye, ſhal ſtare abroad

The eye is deceiued by the ſwift motion of the hãd.

broad with his eyes,& feele himſelf ſoundly hurt,before he ſhall perfectly ſee how to defend himſelfe. So thoſe that truſt to their ſight,the excellẽcy of a good eye,their great cunning, & perfect wards of the daggers,that they can better ſee to ward then with a buckler,ſhall euer be deceiued. And whẽ they be wounded,they ſay the Agẽt was a litle too quicke for them;ſometimes they ſay they bare their dagger a litle too low : ſometimes they are thruſt vnder the dagger,then they ſay,they bare it a litle too high :ſometimes a thruſt being ſtrongly made , they being ſoundly paid therewith, ſay, they were a litle too ſlow,& ſometimes they be ſoundly paid with a thruſt,& they thinke they were a litle too quick.So they that practiſe or thinke to be cunning in the dagger ward, are all the dayes of their liues learning,and are neuer taught.

The Dagger is an imperfect ward.

That the Sword and Buckler hath the vantage against the Sword and Target.

THe Sword & Target together hath but two fights;that is, the variable fight, & the cloſe fight,for the cloſe fight, the nũber of his feet are too many to take againſt any mã of skill hauing the Sword & buckler,& for the variable fight although not ſo many in number,yet too many to win the place with his foot to ſtrike or thruſt home.The ſword & buckler-man can out of his variable,opẽ & gardãt fight, come brauely off & on, falſe and double, ſtrike & thruſt home , & make a true croſſe vpon euery occaſion at his pleaſure:if the Sword & Target mã will flie to his gardãt fight, the bredth of his Target will not ſuffer it , if to his open fight,thẽ hath the Sword & Buckler man in effect the ſword and Buckler to the ſingle , for in that fight by reaſon of the bredth,the target can do litle good or none at all. 25

The short Staffe.

NOw for the vantage of the ſhort Staffe a-
26 gainſt the Sword and Buckler , Sword & Target, two hand ſword , ſingle Sword, Sword and Dagger , or Rapier and Poiniard, there is no great queſtion to be made in anie of theſe weapons: whenſoeuer anie blow or thruſt ſhall be ſtrongly made with the ſtaffe, they are euer in falſe place, in the cariage of the wards, for if at any of theſe ſixe weapons he carie his ward high & ſtrōg for his head , as of neceſſitie he muſt carie it verie high, otherwiſe it will be too weake to defend a blow being ſtrongly made at the head , then will his ſpace be too wide, in due time to breake the thruſt from his bodie. Againe, if he carie his ward lower , thereby to be in equall ſpace for readineſſe to breake both blow & thruſt, then in that place his ward is too low, and too weake to defend the blow of the ſtaffe: for the blow being ſtrongly made at the head vpon that ward , will beate downe the ward and his head together, and put him in great danger of his life. And here is to be noted, that if he fight well , the ſtaffe-man neuer ſtriketh but at the head , and thruſteth preſently vnder at the body : and if a blow be firſt made, a thruſt followeth ; & if a thruſt be firſt made, a blow followeth ; and in doing of any of them, the one breedeth the other : ſo that howſoeuer anie of theſe ſixe weapons ſhall carie his ward ſtrongly to defend the firſt, he ſhall be too farre in ſpace to defend the ſecond, whether it be blow or thruſt.

Yet againe for the ſhort ſtaffe: the ſhort ſtaffe hath the vantage againſt the Battel-axe, blacke-bill, or Halbard,

bard: the ſhort ſtaffe hath the vantage, by reaſon of the nimbleneſſe and length: he will ſtrike and thruſt freely, and in better and ſwifter time then can the Battel-axe, Blacke-bill, or Halbard: and by reaſon of his iudgement, diſtance and time, fight ſafe. And this reſolue vpon, the ſhort ſtaffe is the beſt weapon againſt all maner of weapons, the Forreſt bill excepted.

The ſhort ſtaffe or half Pike hath the aduantage againſt two ſword and dagger men, or two Rapiers. Poiniards, and Gantlets.

Alſo the ſhort ſtaffe hath aduantage againſt two Swords and Daggers, or two Rapiers, Poiniards and Gantlets, the reaſons and cauſes before are for the moſt part ſet downe already, the which being well conſidered, you ſhall plainely ſee, that whenſoeuer anie one of the Sword & Dagger men, or Rapier and Poiniard men ſhall breake his diſtance, or ſuffer the Staffe-man to breake his, that man which did firſt breake his diſtãce, or ſuffer the diſtance to be won againſt him, is preſently in danger of death. And this cãnot in reaſon be denied, becauſe the diſtance appertaining to the Staffe-man, either to keepe or breake, ſtandeth vpon the mouing of one large ſpace alwayes at the moſt, both for his offence or ſafety. The other two in the breach of their diſtance to offend the Staffe-man, haue alwayes foure paces at the leaſt therin they fall too great in number with their feet, and too ſhort in diſtance to offend the Staffe-man. Now there reſteth no more to be ſpoken of, but how the Staffe-man ſhall behaue himſelfe to keepe that diſtance, that one of the Sword & Dagger men get not behind him, while the other ſhal buſie him before: to do that is very eaſie, by reaſon of the ſmal nũber of his feet, for by a verie ſmall turning of his feet, as it were in the Center point of a wheele, the other two to keepe their diſtance, are driuen to runne twentie foote for one, as it

were vpon the vttermoſt part or circle of the wheele: all this while the Staffe-man is verie well. Then it commeth thus to paſſe, whether they both labour to get behind him, or one keepe directly before him whileſt the other get behind him, yet before that be brought to paſſe, they ſhal either be both before him or iuſt againſt both ſides of him: at which time ſoeuer the Staffe-man finding either of them within diſtance, he preſently in making of his play, ſlayeth with blow or thruſt one of thē, or at the leaſt putteth him in great danger of his life. If the Staffe-man take his time, when they are both before him, that is to ſay, before they come to the half ring, iuſt againſt both ſides of the Staffe-man, then he that is neareſt within diſtance is ſlain by blow or thruſt, or put in great danger of his life. But if the Sword and Dagger men do keepe their diſtance vntill they come to the iuſt halfe ring right againſt the ſides of the Staffe-man, and then breake diſtance, that man that firſt breaketh diſtance is ſlaine with blow or thruſt, or ſore hurt, and in great danger of death: and the Staffe-man in making that play at that inſtant, muſt turne with one large pace, the which he may eaſily do, before the other can get neare enough to offend him, by reaſon that he hath to make with his feet but one large pace, but the other hath at the leaſt three paces. But if the Sword and Dagger-men will in the time that they be before him, keep their diſtance in the time of their being vpon the middle part of the outſide of the circle, right againſt both ſides of him, & will labor with all heed & diligence to be both or one of thē behind him, that troubleth the Staffe-man nothing at all, for in that very time, when he findeth them paſt the middle part of the circle, he preſently

ſently turneth, by the which he ſhall naturally ſet himſelfe as it were in a triangle, and both the ſword and dagger-men, ſhall thereby ſtand both before him in true diſtance of three paces, from offending of him at the leaſt, as at the firſt they did. And take this for a true ground, there is no man able to ward a ſound blow with the Sword and Dagger, nor Rapier, Poinyard, and Gantlet, being ſtrongly made at the head, with the Staffe, and run in withall, the force of both handes is ſuch, being in his full motion and courſe, that although the other do carie his ward high and ſtrong with both handes, yet his feete being mouing from the ground, the great force of the blow will ſtrike him with his ward, and all downe flat to ground. But if he ſtand faſt with his feete, he may with both weapons together, ſtrongly defend his head from the blow, but then you are ſufficiently inſtructed, the thruſt being preſently made, after the blow full at the bodie, it is impoſſible in due time to breake it, by reaſon of the largeneſſe of his ſpace.

The ſhort Staffe hath the vantage againſt the long ſtaffe, and Morris Pike, and the Forreſt bill againſt all maner of weapons.

THe reaſons are theſe. The ſhort Staffe 27
hath the vantage of the long Staffe and Morris Pike in his ſtrength & narrownes of ſpace in his foure wardes of defence. And the Forreſt bill hath the vantage of all maner of weapons in his ſtrength and narrownes of ſpace in his eight wardes of defence: and the rather because the Bill hath two wardes for one againſt the Staffe

or Morris Pike, that is to ſay, foure with the Staffe, and foure with the head, and is more offenſiue then is the Staffe or Morris Pike: yet a queſtiō may be made by the vnskilfull, concerning the fight between the long Staffe and the ſhort, in this ſort: Why ſhould not the long Staffe haue aduantage againſt ſhort Staffe, ſince that the long Staffe-man, being at libertie with his handes, may make his long Staffe both long and ſhort for his beſt aduantage, when he ſhall thinke it good, and therefore when he ſhall find himſelfe ouermatched in the length of his Staffe, by the ſtrength of the ſhort Staffe, and narrowneſſe of ſpace in his foure wardes of defence, he can preſently by drawing backe of his Staffe in his handes, make his Staffe as ſhort as the others, and ſo be readie to fight with him at his owne length. To this I anſwere, that when the long Staffe-man is driuen there to lye, the length of his Staffe that will lye behind him, will hinder him to ſtrike, thruſt, ward, or goe backe in due time. Neither can he turne the contrarie end of his Staffe to keepe out the ſhort Staffe man from the Cloſe, nor ſafely to defend himſelfe at his comming in.

A queſtion.

Anſwere.

Againe of the vantages of weapons.

28 TAke this for a general rule, all long Staues, Morris Pikes, Forreſt bils, Iauelins, or ſuch like long weapons, of what ſort ſoeuer, being aboue the true lengthes, the ſhorteſt haue the aduantage, becauſe they can croſſe and vncroſſe in ſhorter time then can the longer: and all maner of ſhort weapons to be vſed with both handes, as ſtaues, and ſuch like, being vnder the perfect lengthes, the

the longeſt haue the aduantage, and all maner of weapons to be vſed with one hand, that are aboue the perfect length of the ſingle Sword, the ſhorteſt haue the vantage, and all maner of weapons vnder the iuſt length of the ſhort Sword, as Fauchions, Skaines, or Hangers, Woodkniues, Daggers, and ſuch like ſhort weapons of imperfect lengthes, the longeſt haue the aduantage, becauſe the fight of theſe weapons conſiſt within the halfe or quarter Sword, wherein by the ſwift motions of their handes, their eyes are deceiued, and in thoſe weapons, commonly for their handes lieth no defence. And if two ſhall fight with ſtaues or Swordes, or what weapons ſoeuer, the one of them hauing his weapon longer then the perfect length, and the other his weapon ſhorter then the perfect length, he that hath the longeſt hath the vantage, becauſe the ſhorteſt can make no true Croſſe in true time. The ſhort Staffe or halfe Pike, Forreſt bill, Partiſan, or Gleue, or ſuch like weapons of perfect length, to be vſed with both handes, haue the aduantage againſt two Swordes and Daggers, or two Rapiers, Poiniardes, and Gantlets, and againſt all other weapons whatſoeuer, the Forreſt bill excepted.

Againe for the short Staffe or halfe Pike.

THe ſhort Staffe is moſt commonly the 29
beſt weapon of all other, although other weapons may be more offenſiue, and eſpecially againſt manie weapons together, by reaſon of his nimbleneſſe and ſwift motions, and is not much inferiour to the Forreſt bill, although the Forreſt bill be more offenſiue, and hath more wardes, becauſe

the Staffe is verie vncertaine, but the Bill is a more certaine marke, by reaſon of the breadth of the head, wherby as the Bill hath aduantage in his wardes in the head, ſo therefore hath the Staffe the like defence, or rather more, to play vpon the head of the Bill, not onely to make a perfect good ward, but thereby, the rather to caſt the Bill out of the right line, whereby the Staffe-man may thruſt ſafe, and endanger the Bill-man: and the rather becauſe therein he is the firſt mouer, wherin there is great vantage, both in time and force. And if the Bilman be not very skilfull (all vantages and diſaduantages of both ſides conſidered,) the ſhort Staffe will proue the better weapon. Laſtly note this, that long Staues, Morris Pikes, and ſuch like weapons of imperfect lengthes, being to be vſed with both hands, notwithſtanding their imperfect lengthes, are perfect weapons to be vſed, the one againſt the other, and their fightes therein perfect, becauſe in drawing of them backe betwixt their handes, their motions are ſwifter backewardes, then is the time of the Agents feet forwardes, by the which all their loſt times are redeemed: therefore theſe weapons in their fightes, the one againſt the other are perfect. And theſe weapons in the night are the beſt weapons of all other, and haue great aduantage againſt the forreſt Bill, ſhort Staffe, or anie maner of ſhort weapons whatſoeuer: for theſe cauſes, they boldly make home their fightes, and if neede be againſt deſperate men, that will venture themſelues to run in, they redeeme their loſt times. But the other with ſhorter weapons for lacke of light, can make no true defence. Thus endeth the vantages of weapons.

Note this.

Queſtions

Queſtions and anſwers betweene the Scholler and the Maiſter, of the vantages and diſaduantages betweene a tall man, and a man of meane ſtature, hauing both the perfect knowledge in their weapons.

Scholler.

WHo hath the aduantage in fight, of a tall man, or a man of meane ſtature?

Maiſter.

The tall man hath the vantage, for theſe cauſes: his reach being longer, and weapon vnto his ſtature accordingly, he hath thereby a ſhorter courſe with his feet to win the true place, wherin by the ſwift motion of his hand, he may ſtrike or thruſt home: in the which time a man of meane ſtature cannot reach him, & by his large pace, in his true pace in his regreſſion further, ſetteth himſelf out of all danger, & theſe are the vantages that a tall man hath againſt anie man of ſhorter reach then himſelfe.

Tall men haue the vantage againſt men of meane ſtature.

Scholler.

What vantage hath a man of meane ſtature againſt a tall man?

Maiſter.

He hath none: becauſe the true times in fight, and actions accordingly, are to be obſerued and done, as well by a tall man, as by a man of meane ſtature.

Scholler.

Why then if this be true, that tall men haue the vantage againſt mē of meane ſtature, it ſhold ſeeme in fight

there is no perfection, other then this, when men of like ſtature, reach, & length of weapon, ſhall fight together, the which will ſeldome or neuer happen, but either in the length of their weapons, ſtatures or reaches (if their ſwords ſhould be of iuſt length) ſome difference moſt commonly there will be in their reaches.

Maiſter.

Yes verily, the tall man hath ſtill the vantage, and yet the fight is perfect, although the men that ſhall happen to fight, ſhall happē to be vnequall in their ſtatures, reaches, or lengths of their weapons.

Scholler.

That can I hardly beleeue, vnleſſe you can tell me by Art how to auoid or ſafely defend my ſelfe, being but a man of meane ſtature, againſt a tall man.

Maiſter.

I will tell you: there belongeth vnto this Art of defence onely to be vſed with the feet, progreſſion, regreſſion, trauerſing, and treading of grounds: in any of theſe you playing the part of the Patient, or Patient Agent, your feete are ſwifter in their motions then are the Agents, becauſe his weight and number of his feet in his comming to win the true place to ſtrike or thruſt home, are greater then yours, and therefore the true time is yours to auoid him, or ſafely to defend your ſelfe: ſo the Art is ſtill true, and the tall man hath ſtill the vantage.

Scholler.

Yet I am not fully ſatisfied herein, becauſe you tell me ſtill that the tall man hath the vantage, and notwithſtanding you ſay the Art is true, wherein then hath the tall man the vantage, when by your Art you can defend your ſelfe againſt him.

Maiſter.

Maiſter.

I will ſatisfie you therein thus. The tall man hath the vantage, he can maintaine his fight, both by nature and Art, with more eaſe then can the man of meane ſtature, becauſe the man of meane ſtature hath thereby a further courſe with his feete to paſſe to the place, wherein he may ſtrike or thruſt home, and in winning of that place, is driuen by Art to come garded vnder his wards to defend himſelfe, becauſe in the time of his comming, the tall man may both naturally or artificially ſtrike or thruſt home, in the which time, if the mā of meane ſtature ſhould faile in the leaſt iote of his Art, he ſhould be in great daunger of death or hurt. But the tall man can naturally and ſafely come to the true place open, without any artificiall wards at all, and therein alſo endanger the other, or driue him ſtill to trauerſe his ground, with all the artificiall skill that he hath to defend himſelfe; and all this the tall man doth by reaſon of his length of weapon, large pace, ſhort courſe, and long reach, with great ſafetie, pleaſure and eaſe. And for thoſe cauſes the tall man hath ſtill the vantage of men of meane ſtature, and yet notwitſtāding the noble Science of Defence moſt perfect and good.

Foure inuincible aduantages conſiſt in a tall man againſt a man of meane ſtature.
Long reach.
Short courſe.
Length of weapō.
Large pace.

Of the long ſingle Rapier fight betweene valiant men, hauing both skill, he that is the beſt wraſtler, or if neither of them can wraſtle, the ſtrongeſt man moſt commonly killeth the other, or leaueth him at his mercie.

WHen two valiant men of skill at ſingle Ra- 31
pier do fight, one or both of them moſt cōmonly ſtanding vpon their ſtrength or skill in wraſtling, will preſently ſeeke to run into

the cloſe; but hauing both skill, not without ſpeciall care of their gard or croſſe, the which they may ſafely do, by reaſon of the length of their Rapiers: but hapning both of one mind, the rather do bring themſelues together: that being done, noskil with Rapiers auaileth, they preſently grapple faſt their hilts, wriſts, armes, bodies or neckes, as in luſtring, wraſtling, or ſtriuing together, they may beſt find for their aduantages: wherby it moſt commonly falleth out, that he that is the beſt wraſtler, or ſtrongeſt man (if neither of them can wraſtle) ouercommeth, wreſting by ſtrength, or fine skill in wraſtling, the Rapier from his aduerſarie, or caſting him frō him, either to the ground, or to ſuch diſtance, that he may by reaſon therof, vſe the edge or point of his rapier, to ſtrike or thruſt him, leauing him dead or aliue at his mercie. But if but one of theſe valiant men ſhall ſeeke to run into the cloſe, and that the other ſhall vſe his skill in trauerſing of his ground, or otherwiſe by ſtanding vpon his gard or *Stocata* ward, to take all maner of aduātages at his cōming, yet all auaileth him not, becauſe the Rapiers being long, the croſſing of the blades cannot be auoided: that being made, the oppreſſor runneth faſter forwards then can the defendant backwards, and ſo are brought together, as in the firſt aſſault they were, & euerie action therein accordingly performed.

Of the Rapier and Poiniard-fight betwixt valiant men, hauing both skill.

32 IF two valiant men do fight at Rapier and Poiniard hauing both skill, one or both of them will preſently preſſe hard to winne the place, wherein in his iudgement he may thruſt home. If both be

be of one mind, the time is doubled in winning the ſame: whereby it commeth to paſſe, that then he that firſt thruſteth, endangereth, killeth or hurteth the other: and if they both thruſt together, as they may do by the equall time of their feet, then they are moſt commonly both ſlaine, or both hurt. And this is well knowne vnto all men of skill, that the place being once gotten, there is neither iudgement, ſpace, pace, nor time, either by wards with their Rapier blades, or by breaking with their Poiniards, or flying backe, that can preſerue or defend them. But if but one of them will ſeeke to win by paſſage, hard preſſing, or otherwiſe the place, wherin in his iudgement he may thruſt home, it is impoſſible for the other to denie him the ſame, becauſe the length of the Rapiers winneth him the croſſe; the croſſe being taken, the place is had; the place being had, he that firſt thruſteth, firſt ſpeedeth: if both thruſt together, they are both in danger: thē preſently followeth (vnleſſe it pleaſe God otherwiſe to haue it) the ſtabs with their daggers, wherein there lieth no defence.

Of the long Rapier & Poiniard-fight betweene two valiant men, the one hauing skil, the other none: that he that hath no skill hath the vantage.

WHen two valiant men ſhal fight with lōg 33
Rapiers and Poiniards, the one hauing skill, and the other none, he that hath no skill moſt commōly proueth himſelf the better mā, for theſe cauſes or reaſons following. Firſt the skilfull man as knowing the other to haue no skill, or finding it to be ſo by his ſhape or

maner of comming towardes him, will preſently yeeld to take the aduantage of his comming, or elſe with all ſpeed put himſelfe into his ſhort ward, to be readie at his comming to make out a ſtrong *Stocata* (as the *Italians* call it:) the other knowing his imperfection in fight, aſſureth himſelfe there can be no great good for him to ſtand long out at the point, preſently redoubleth or reuiueth his ſpirits with perfect reſolution, to make ſhort worke, couragiouſly with ſome offenſiue action, ſuch as nature ſhall beſt yeeld vnto him, flieth in with all force and agilitie: the skilfull man ſtandeth watching to take ſuch aduantages as his ſchoolemaiſter hath taught him, in the which time, manie times it falleth out, he is taught a new time, euen by an vnskilfull man that neuer fought before, is ſore hurt or ſlaine: and if it happen they both miſſe in their offenſiue actions, then by reaſon thereof, and of the imperfect length of their Rapiers, they come to ſtabbing with their Poiniards, wherin there lyeth no defence, becauſe diſtance being broken, iudgement faileth, time is loſt, and their eies (by the ſwift motions of their handes) are deceiued.

Of the long ſingle Rapier, or Rapier and Poiniard-fight betweene two vnskilfull men being valiant.

34 WHen two vnskilfull men (being valiant) ſhall fight with long ſingle Rapiers, there is leſſe danger in that kind of fight, by reaſon of their diſtance in conuenient length, waight, and vnweildineſſe, then is with ſhort Rapiers: whereby it commeth to paſſe, that what hurt ſhall happen to be done, if anie with the edge or point of their Rapiers

Rapiers is done in a moment, and preſently will grapple and wraſtle together, wherin moſt commonly the ſtrongeſt or beſt Wraſtler ouercommeth, and the like fight falleth out betweene them, at the long Rapier and Poiniard, but much more deadly, becauſe in ſtead of Cloſe and Wraſtling, they fall moſt commonly to ſtabbing with their Poiniardes.

Of the imperfection and inſufficiencie of Rapiers in generall, of what length ſoeuer they be.

35

IF two fight with long Rapiers, vpon euerie Croſſe made within the halfe Rapier, if they haue Poiniardes, they moſt commonly ſtabbe each other, which cannot be auoided, because the Rapiers being long, the Croſſe cannot be vndone of either ſide, without going backe with their feete, the which likewiſe in due time cannot be done, becauſe the hand is more ſwifter then the feete, and the feete more ſwifter in their courſe forwardes then backwardes, neither can the Croſſe be preuented, becauſe the point of neceſſitie lyeth too farre off in his offence, or elſe within compaſſe of the true time of the hand and bodie, by reaſon of his imperfect length: and ſo by the like reaſons, if two fight with long ſingle Rapiers, vpon euerie Croſſe made therewith, within the halfe Rapier, the Cloſe cannot be auoided, wherby it commeth to paſſe moſt commonly, that the ſtrongeſt man or beſt Wraſtler ouercommeth. Now if two do fight with ſhort Rapiers, or Rapiers of conuenient length, ſuch Rapiers be inconuenient and inſufficient alſo for lacke of an hilt to defend the hand and head from the blow; for no eie (in making a

If they ſtand vpon breaking with their Daggers, he that firſt winneth the place, and thruſteth home, hurteth the other for lacke of the circũference: if both thruſt together, they are both ſped, becauſe their Spaces of Defence are too wide to anſwere the time of the hand, and by the ſwift motion thereof, the eye in that diſtance is by the ſame deceiued.

The feete in their courſe, but not in the firſt motion, alwaies note for the auoiding of great errours.

perfect ward for the head, to defend a blow, can diſcerne to take the ſame within three or foure inches, wherby it may as well and as often fall vpon the hand, as vpon the blade of the Rapier. Againe, the hilt as well ſerueth to defend the head as the hand, and is a more ſure and ſtrong ward, then is the blade of the Rapier. And further, vnderſtand this for truth, that in gardant and open fight, the hand without an hilt lieth open to moſt blowes that ſhalbe ſtroken by the Agent, out of the gardant or open fight, becauſe in the true cariage of the gardant fight, the hand muſt lie aboue the head, in ſuch ſtraightnes and narrownes of ſpace, that which way ſoeuer the Agent ſhall ſtrike or thruſt at the head, face, or bodie, the remouing of two or foure inches ſhall ſaue all. And now ſomewhat more for the ſhortneſſe or conuenient length of Rapiers.

Rapiers hauing no hilts to defend the head, the Rapier-man is driuen of neceſſitie to lie at the variable fight or low ward, and being there he can neither defend in due time, head, face, nor bodie from the blowes or thruſtes of him, that ſhall fight out of the gardant or open fight, but is continually in great danger of the Agent, for theſe cauſes following. Firſt, becauſe his ſpace is too wide to defend his head from blow or thruſt. Secondly his Pace ſtanding vpon that fight, wilbe of neceſſitie too great or too narrow: if too narrow, too weak: if too large, his weight and number of his feet, are too great to endanger him, that is vpon his gardant or open fight.

Of

Of the imperfection and inſufficiencie of the fight of the ſingle Rapier, Rapier and Poiniard, Rapier and Buckler, Rapier and Cloke, and Rapier and Gloue of maile.

THe Rapier fight, whether it be ſingle or ac- 36
cõpanied with Poiniard, Buckler, cloke, or gloue of male, is ſtill by reaſon of the inſufficiencie or imperfection of the Rapier, an imperfect fight: vnperfect inſtruments can make no perfect muſicke, neither can vnperfect weapons make perfect fight: let the men that handle them haue all the knowledge that may be in all maner of weapons, yea the full height, or perfection, and true habite by his great labour and induſtry, euen as it were naturally effected in him, yet if the weapons that they ſhall fight withall be imperfect or inſufficient to performe whatſoeuer appertaineth vnto true fight, as concerning the perfection of their ſafetie, it auaileth them nothing. What ſhall we then ſay for the Rapier? Is the Rapier an imperfect or inſufficient weapon to perfourme whatſoeuer appertaineth vnto the true fight? Yea: Wherefore? Becauſe vnto the true fight there appertaineth foure fights, Gardant fight, Open fight, Variable fight, and Cloſe fight: without all foure of theſe fights it is impoſſible to fight ſafe: but the Rapier for lacke of an hilt is an vnperfect weapon, and therefore inſufficient to fight ſafe vpon theſe foure fights, the reaſons are alreadie ſet downe in the Paradoxe before, but it is inferred to looſe the benefit of two of the

beſt fights, gardant and open fight,and to flie from thē, and truſt only vnto variable fight, and cloſe fight. Now hauing proued through the imperfection or inſufficiencie of the Rapier, the imperfection of the Rapier fight, it remaineth that I ſpeake of the reſt of the weapons, or inſtruments appertaining vnto Rapier fight.

The Rapier and Poiniard fight, the Rapier & Buckler fight, the Rapier and cloke fight,& the Rapier & gloue of male fight: all theſe fights by reaſon of the imperfection of the Rapier, and Rapier fight, are all alſo imperfect fights: and for proofe of the vncertaintie and impoſſibilities of ſafetie in any of theſe fights, thus it ſtandeth. Theſe fights depend altogether vpō variable fight and cloſe fight: in anie of theſe fights it is impoſſible in true ſpace of Offence to keepe the blades of their Rapiers from croſſing, or frō breaking with the Poiniards, buckler, cloke, or breaking or catching with the gloue of male; becauſe in anie of theſe two fights, the Agent hath ſtill in true ſpace the blade of the Patients Rapier to worke vpon. Theſe things by letters cannot be made more plaine, neither is it vnknowne to the skilfull, or in fight by anie meanes to be auoided, the weapon being too farre in true ſpace to be wrought vpon, the place cannot be denied, do the patient Agent what he can for his life to the contrarie,either by blowes,thruſts, falſing,or doubling of thruſts,going backe, indirections, or turnings of the body, or what elſe ſoeuer may in the higheſt touch of wit or ſtrength, or agilitie of bodie be deuiſed or done,to keepe out the Agent: but ſtill the Agent by narrowneſſe of ſpace bringeth himſelf by ſtrōg gard to the place, where being brought,it is as impoſſible to fight ſafe, as it is for two deſperate men ſet together

ther being both blind;becauſe in the true place (wonne in Rapier or variable fight) their eyes by the ſwift motions of their hands are deceiued , the croſſes in that fight are falſe, their diſtance, iudgements and times are loſt,either to offend in ſafetie, or ſafely to defend themſelues: and theſe reaſons, rules, or grounds of the feates of armes are infallible and inuincible.

Now, ô you Italian teachers of Defence , where are your *Stocatas*, *Imbrocatas*, *Mandritas*, *Puntas*, & *Puynta reuerſas*, *Stramiſons*, *Paſſatas*, *Carricados*, *Amazzas*, & *Incartatas*,& playing with your bodies , remouing with your feet a litle aſide,circle wiſe winding of your bodies, making of three times with your feet together ,marking with one eye the motion of the aduerſary,&with the other eye the aduãtage of thruſting? What is become of all theſe iugling gambalds , Apiſh deuiſes, with all the reſt of your ſquint-eyed trickes , when as through your deepe ſtudies, long practiſes, & apt bodies, both ſtrong & agilious, you haue attained to the height of all theſe things? What then auaileth it you, when you ſhal come to fight for your liues with a man of skill? you ſhall haue neither time,nor place,in due time to performe any one of them , nor gardant nor open fight ſafely to keep out a man of skill,a man of no skill, or ſcholler of your owne teaching, from the true place, the place of ſafetie , the place of vncertaintie or miſchiefe , the place of wounds or death,but are there inforced to ſtand in that miſchieuous, vncertaine, dangerous, and moſt deadly place, as two men hauing loſt in part their chiefeſt ſences, moſt furiouſly with their rapiers or poiniards , wounding or ſlaying each other.

Thus endeth the imperfect fights of the rapier with

all maner of weapons or inſtruments thereto ap pertaining, with their imperfections, through the true grouds and rules of the Art of armes, truly diſplayed & brought to light.

All laud be vnto the Almighty God.

That the reaſons vſed by the Italian Fencers in commending the vſe of the Rapier and Poiniard, becauſe it maketh peace, maketh againſt themſelues.

37 IT hath bin commonly held, that ſince the Italians haue taught the Rapier fight, by reaſon of the dangerous vſe therof, it hath bred great ciuilitie amongſt our Engliſh nation, they will not now giue the lye, nor with ſuch foule ſpeeches abuſe themſelues, therefore there are fewer frayes in theſe times then were wont to be: it cannot be denied but this is true, that we are more circumſpect of our words, and more fearefull to fight, then heretofore we haue bene. But whereof commeth it? Is it from this, that the Rapier maketh peace in our minds; or from hence, that it is not ſo ſufficient defence for our bodies in our fight? He that will fight when he is armed, will not fight when he is naked: is it therefore good to go naked to keepe peace? he that would fight with his Sword and Buckler, or Sword and Dagger, being weapons of true defence, will not fight with his Rapier and Poiniard, wherein no true defence or fight is perfect: are theſe inſufficiēt weapōs therfore the better, becauſe not being ſufficiēt to defēdvs in fight, they force vs vnto peace? What elſe is it, but to ſay, it is good for ſubiects

There are few frayes, but more valiant Gentlemē ſlaine now then were then.

ſubiects to be poore, that they may not go to law: or to lacke munition, that they may not fight, nor go to the warres: and to conclude, what more followeth through the imperfect workes of theſe *Italian* peacemakers? They haue made many a ſtrong man in his fight weake, many a valiant man fearefull, manie a worthie man truſting to their imperfect fight, hath bene ſlaine, and manie of our deſperate boyes and young youthes, to become in that Rapier-fight, as good men as *England* yeeldeth, and the talleſt men in this land, in that fight as verie boyes as they and no better. This good haue the *Italian* teachers of Offence done vs, they haue transformed our boyes into men, and our men into boyes, our ſtrong men into weakeneſſe, our valiant men doubtfull, and manie worthie men reſoluing themſelues vpon their falſe reſolutions, haue moſt wilfully in the field, with their Rapiers ended their liues. And laſtly, haue left to remaine amongſt vs after their deathes, theſe inconueniences behind them, falſe Fence-bookes, imperfect weapons, falſe fightes, and euill cuſtomes, whereby for lacke of vſe and practiſe in perfect weapons and true fight, we are diſabled for the ſeruice of our Prince, defence of our countrey, and ſafetie of our liues in priuate fight.

That the short Sword hath the aduantage againſt the long Sword or long Rapier.

WHereas for the moſt part opinions are 38
generally holden, that the long Sword, or long Rapier, hath the vantage in fight againſt the ſhort Sword, which the *Italian* teachers of Defence, by their falſe de-

monſtratiõs haue brought vs to beleeue. I haue thought good that the truth may appeare which hath the vantage, to adde my helpe vnto the reaſons they vſe in their owne behalfe, for that yet I could neuer heare them make a ſound reaſon for the ſame. Theſe are the reaſons.

Theſe reaſons are vſed by the Italians.

Firſt with my long Rapier, I will put my ſelfe into my gard or *Stocata*, holding my hilt backe by the outſide of my right thigh, keeping in ſhort the point of my Rapier, ſo as he that hath the ſhort Sword, ſhall not be able to reach the point of my Rapier, to make his ward or Croſſe with his Dagger, Buckler, Sword, or Cloke, without ſtepping in of his foote, the which time is too long to anſwere the time of the hand, by reaſon of my diſtance. I can there ſtand ſafe without danger of blow or thruſt, playing the Patients part: if you ſtrike or thruſt you do it too ſhort, by reaſon of my diſtance: if you ſeek to come nearer, you muſt do it with the time of your foote, in the which time I may ſafely thruſt home: if in that diſtance you breake it not, you are ſlaine: if you do breake it, yet you do me no harme, by reaſon of my diſtance, and I may ſtand faſt and thruſt againe, or flie backe at my pleaſure: ſo haue you put your ſelfe in danger of your life, and hauing hardly eſcaped, are driuen againe to begin a new bought, as at the firſt you did. Againe, if I pleaſe, I can be the oppreſſour, keeping the ſame gard, and my point in ſhort as I did before, and preſſing ſtrongly by putting in by litle and litle of my feete, vntill the place with my foote be gotten, wherein (in my iudgement) I may thruſt home, the which I may boldly and ſafely do, without reſpect of anie ward at all, by reaſon of my diſtance, in which time of my comming he muſt ſtrike, thruſt, ward, or go backe: if he go backe,

it

it is a great diſgrace: if he ſtrike or thruſt, it is too ſhort: if he ſtand to defend, the place being alreadie gotten, where I may thruſt home, the thruſt being verie quicke & ſtrongly made, ſuch is the force and ſwiftneſſe thereof, that it is impoſſible by nature or art, for anie man to breake one thruſt of an hundred. Theſe reaſons in my opinion may ſuffice to confirme the wiſe, that there is no queſtion to be made, but that the long Rapier hath the aduantage againſt the ſhort Sword.

A confutation of the Italians reaſons.

Sir you haue pretily handled your diſcourſe, concerning the vantages of the long Rapier againſt the ſhort Sword, eſpecially at the firſt ſhew, and according to common ſence, but for the ſubſtance and truth of the true fight, you haue ſaid nothing, becauſe for the performance of anie of your allegations, you haue neither true Pace, Place, Time, nor Space: theſe are the reaſons. Your Pace of neceſſitie muſt be too large, becauſe otherwiſe you cannot keepe ſafe the point of your long Rapier, from the Croſſe of the ſhort Sword, vnleſſe you will with a narrow Pace keepe backe your hilt ſo farre, that the ſpace of your offence wilbe too large or too long in diſtance, and your bodie vnapt to moue and to thruſt both ſtrong and quicke in due time, nor aptly to keepe your diſtance, to win the place with your feete, to thruſt home. So now you may plainely ſee, if you haue skill in the art or ſcience of Defence, that to performe anie thing which you haue alleadged, you haue neither true Pace, Place, time nor Space. But if you will ſtand vpon the largeneſſe of your Pace, to keepe backe or ſaue the point of your long Rapier from the ward or Croſſe of the ſhort Sword, or vpon your *Paſſatos*, in all theſe you haue great diſaduantages: and

theſe are my reaſons: Your number will be too great, as thus: whenſoeuer you meane out of your large pace to thruſt home, you muſt of neceſſitie make foure times with your feet, and one with your hand, or two times with your feet, and one with your hand at the leaſt: and whenſoeuer you make any of your paſſages, the nũber of your feet are greater then the greateſt of any of theſe times done out of the large pace: but the patient with his ſhort ſword, to auoyd you, or diſappoint you of your thruſt, hath but one time with his foot, at or before the which time, as he in his iudgemẽt ſhall find you in your motion, hath by the ſlow and great number of your motions or times, ſufficient time ſafely out of all danger to make himſelfe readie to take his croſſe with his ſhort ſword. Now Sir, whether you thruſt or not thruſt, whether you play the part of an Agent, or Patient, it helpeth you nothing, for he that hath the ſhort ſword hath foure times or motions againſt the long Rapier, namely, bent, ſpent, lying ſpent, and drawing backe, in all maner of fights theſe are to be obſerued both by the Patient and Agent. Now note, he that hath the long Rapier muſt of neceſſitie play vpon one of theſe foure motions, or be Patient, which ſoeuer he ſhall do, he is ſtill in great danger of the croſſe of the ſhort ſword, becauſe if he be Agent, his number is too great, he falleth into one of the foure motions, the Patient with his ſhort ſword, hauing but the time of the hand, or hãd & foot, ſafely vpon theſe actions or times taketh his croſſe with the ſhort Sword: that being done, he preſently vncroſſeth and ſtriketh or thruſteth at his pleaſure him that hath the long Rapier, in the head, face, or bodie. Now here is againe to be noted, that when the croſſe

is

is made, if he that hath the long Rapier ſtand faſt, he is wounded preſently in the vncroſſing of the ſhort ſword, if he ſtep or leape backe to ſaue himſelfe, yet the time of the hand being ſwifter then the time of the foot, ouertaketh him, with blow or thruſt in the arme, hand, head, face and bodie. Now if he that hath the long Rapier will be patient & make no play, but lie ſtill watching to make his thruſt or *Stocata* iuſt in the comming or mouing of the Agents feete with his ſhort ſword, then he hath as great diſaduantage as he had when he was Patient, becauſe thē the Agent with his ſhort Sword hath but hand and foot to make his croſſe: which is moſt ſafely to be done in that time, which we call Bent, and is as impoſſible for the Rapier-man to preuent, as it is for an vnskilfull to ſtrike or thruſt iuſt together with a man of skill. Then thus I conclude, that he that fighteth with a long Rapier, againſt him that fighteth with a ſhort Sword, can do nothing in due time to defend himſelfe, or hurt the other, but is ſtill in daunger of his life, or at the mercie of him that hath the ſhort Sword, or elſe hath no ſafe way to helpe himſelfe, but onely *Cobs* Trauerſe. *Cobs Trauerſe.*

Cob was a great quareller, and did delight in great brauerie to giue foule words to his betters, and would not refuſe to go into the field to fight with any man, and when he came into the field, would draw his Sword to fight, for he was ſure by the cunning of his Trauerſe, not to be hurt by anie man: for at anie time finding himſelfe ouermatched would ſuddenly turne his backe and runne away with ſuch ſwiftneſſe, that it was thought a good horſe would ſcarce take him. And this when I was a young man, was verie much ſpoken of by many Gentlemen of the Innes of

the Court, and was called *Cobs* Trauerſe and thoſe that had ſeene anie go backe too faſt in his fight, would ſay, he did tread *Cobs* Trauerſe.

George Siluer his militarie riddle, truly ſet downe betweene the Perfection and Imperfection of fight: containing the handling of the foure fights: wherein true conſiſteth the whole ſumme and full perfection of the true fight, with all maner of weapons, with an inuicible concluſion.

Gardant fight ſtayeth, putteth backe, or beateth gardant fight.

Open fight ſtayeth, putteth backe, or beateth open fight.

Variable fight anſwereth variable fight in the firſt diſtance, and not otherwiſe, except it be with the perfect length againſt the imperfect.

Cloſe fight is beaten by gardant fight.

Variable cloſe & gardant fight, beateth gardant fight, open fight, variable fight, and cloſe fight.

Gardant fight in the imperfection of the Agent or Patient, winneth the halfe ſword, and preuenteth the cloſe, and whoſoeuer firſt ventureth the cloſe, looſeth it, and is in great danger of death, and not poſſible to eſcape or get out againe without great hurt.

There attendeth moſt diligently vpon theſe foure fights foure offenſiue actions, which we call certaine, vncertaine, firſt, before, iuſt, and afterwards: they are to be performed through iudgement, time, meaſure, number and waight, by which all maner of blowes, thruſts,

thruſts, falſes, doubles, or ſlips, are preuented, or moſt ſafely defended. And thus endeth my riddle.

Now followeth the concluſion, that whoſoeuer ſhall thinke or find himſelfe in his fight too weake for the Agent, or Patient Agent, and therefore, or by reaſon of his drunkenneſſe, or vnreaſonable deſperateneſſe ſhall preſe within the halfe Sword, or deſerately runne in of purpoſe to giue hurt, or at leaſt for taking of one hurt, to giue another, ſhall moſt aſſuredly be in great daunger of death or wounds, and the other ſhall ſtill be ſafe and go free.

Veritas vincit.

A BRIEFE NOTE OF THREE ITA-lian Teachers of Offence.

I write not this to diſgrace the dead, but to ſhew their impudẽt boldneſſe and inſufficiency in performance of their profeſſion when they were living: that from henceforth this briefe note may be a remembrance and warning to beware of bad I wiſt.

THere were three Italian Teachers of Offence in my time. The firſt was *Signior Rocko*: the ſecond was *Ieronimo*, that was *Signior Rocko* his boy, that taught Gentlemen in the *Blacke-Fryers*, as Vſher for his maiſter in ſteed of a man. The third was *Vincentio*. This *Signior Rocko* came into *England* about ſome thirtie yeares paſt: he taught the Noblemen & Gentlemen of the Court; he cauſed ſome of them to weare leaden ſoales in their ſhoes, the better to bring them to nimblenеſſe of feet in their fight. He disburſed a great ſumme of mony for the leaſe of a faire houſe in *Warwicke* lane, which he called his Colledge, for he thought it great diſgrace for him to keepe a Fence-ſchoole, he being then thought to be the onely famous Maiſter of the Art of armes in the whole world. He cauſed to be fairely drawne and ſet round about his Schoole all the Noblemens and Gentlemens armes that were his Schollers, and hanging right vnder their armes their Rapiers, daggers, gloues of male and gantlets. Alſo, he had benches and ſtooles, the roome being verie large, for Gentlemẽ to ſit round about his Schoole to behold his teaching. He taught none commonly vnder twentie, fortie, fifty, or an hundred pounds. And becauſe all things ſhould be verie neceſſary for the Noblemẽ & gentlemẽ, he had in

in his ſchoole a large ſquare table, with a greene carpet, done round with a verie brode rich fringe of gold, alwaies ſtanding vpon it a verie faire Standiſh couered with Crimſon Veluet, with inke, pens, pin-duſt, and ſealing waxe, and quiers of verie excellent fine paper gilded, readie for the Noblemen & Gentlemen (vpon occaſion) to write their letters, being then deſirous to follow their fight, to ſend their men to diſpatch their buſineſſe. And to know how the time paſſed, he had in one corner of his ſchoole a Clocke, with a verie faire large Diall, he had within that ſchoole, a roome the which was called his priuie ſchoole, with manie weapons therein, where he did teach his ſchollers his ſecret fight, after he had perfectly taught them their rules. He was verie much beloued in the Court.

There was one *Auſten Bagger*, a verie tall gentleman of his handes, not ſtanding much vpon his skill, but carying the valiant hart of an Engliſhman, vpon a time being merrie amongſt his friendes, ſaid he would go fight with *Signior Rocco*, preſently went to *Signior Rocco* his houſe in the *Blackefriers*, and called to him in this maner: *Signior Rocco*, thou that art thought to be the onely cunning man in the world with thy weapon, thou that takeſt vpon thee to hit anie Engliſhman with a thruſt vpon anie button, thou that takeſt vpon thee to come ouer the ſeas, to teach the valiant Noblemen and Gentlemen of *England* to fight, thou cowardly fellow come out of thy houſe if thou dare for thy life, I am come to fight with thee. *Signior Rocco* looking out at a window, perceiuing him in the ſtreet to ſtand readie with his Sword and Buckler, with his two hand Sword drawne, with all ſpeed ran into the ſtreet, and manfully

let flie at *Auſten Bagger*, who moſt brauely defended himſelfe, and preſently cloſed with him, and ſtroke vp his heeles, and cut him ouer the breech, and trode vpon him, and moſt grieuouſly hurt him vnder his feet: yet in the end *Auſten* of his good nature gaue him his life, and there left hin. This was the firſt and laſt fight that euer *Signior Rocco* made, ſauing once at Queene Hith he drew his Rapier vpon a waterman, where he was throughly beaten with Oares and Stretchers, but the oddes of their weapons were as great againſt his Rapier, as was his two hand Sword againſt *Auſten Baggers* Sword and Buckler, therefore for that fray he was to be excuſed.

Then came in *Vincentio* and *Ieronimo*, they taught Rapier-fight at the Court, at *London*, and in the countrey, by the ſpace of ſeauen or eight yeares or thereabouts. Theſe two *Italian* Fencers, eſpecially *Vincentio*, ſaid that Engliſhmen were ſtrong men, but had no cunning, and they would go backe too much in their fight, which was great diſgrace vnto them. Vpon theſe words of diſgrace againſt Engliſhmen, my brother *Toby Siluer* and my ſelfe, made challenge againſt them both, to play with them at the ſingle Rapier, Rapier and Dagger, the ſingle Dagger, the ſingle Sword, the Sword and Target, the Sword and Buckler, & two hand Sword, the Staffe, battell Axe, and Morris Pike, to be played at the Bell Saua ge vpon the Scaffold, where he that went in his fight faſter backe then he ought, of Engliſhman or Italian, ſhold be in danger to breake his necke off the Scaffold. We cauſed to that effect, fiue or ſixe ſcore Bils of challenge to be printed, and ſet vp from *Southwarke* to the Tower, and from thence through *London* vnto *Weſtminſter*,

minſter, we were at the place with all theſe weapons at the time apointed, within a bow ſhot of their Fence ſchoole: many gentlemen of good accompt, caried manie of the bils of chalenge vnto them, telling them that now the *Siluers* were at the place appointed, with all their weapons, looking for them, and a multitude of people there to behold the fight, ſaying vnto them, now come and go with vs (you ſhall take no wrong) or elſe you are ſhamed for euer. Do the gentlemen what they could, theſe gallants would not come to the place of triall. I verily thinke their cowardly feare to anſwere this chalenge, had vtterly ſhamed them indeed, had not the maiſters of Defence of *London*, within two or three daies after, bene drinking of bottell Ale hard by *Vincentios* ſchoole, in a Hall where the *Italians* muſt of neceſſitie paſſe through to go to their ſchoole: and as they were comming by, the maiſters of Defence did pray them to drinke with them, but the *Italians* being verie cowardly, were afraide, and preſently drew their Rapiers: there was a pretie wench ſtanding by, that loued the *Italians*, ſhe ran with ourcrie into the ſtreet, helpe, helpe, the *Italians* are like to be ſlaine: the people with all ſpeede came running into the houſe, and with their Cappes and ſuch things as they could get, parted the fraie, for the Engliſh maiſters of Defence, meant nothing leſſe then to foile their handes vpon theſe two faint-harted fellowes. The next morning after, all the Court was filled, that the *Italian* teachers of Fence had beaten all the maiſters of Defence in *London*, who ſet vpon them in a houſe together. This wan the *Italian* Fencers their credit againe, and thereby got much, ſtill continuing their falſe teaching to the end of their liues.

This *Vincentio* proued himſelfe a ſtout man not long before he died, that it might be ſeene in his life time he had bene a gallant, and therefore no maruaile he tooke vpon him ſo highly to teach Engliſhmen to fight, and to ſet forth bookes of the feates of Armes. Vpon a time at *Wels* in Somerſetſhire, as he was in great brauerie amongſt manie gentlemen of good accompt, with great boldneſſe he gaue out ſpeeches, that he had bene thus manie yeares in *England*, and ſince the time of his firſt comming, there was not yet one Engliſhman, that could once touch him at the ſingle Rapier, or Rapier and Dagger. A valiant gentleman being there amongſt the reſt, his Engliſh hart did riſe to heare this proude boaſter, ſecretly ſent a meſſenger to one *Bartholomew Bramble* a friend of his, a verie tall man both of his hands and perſon, who kept a ſchoole of Defence in the towne, the meſſenger by the way made the maiſter of Defence acquainted with the mind of the gentleman that ſent for him, and of all what *Vincentio* had ſaid, this maiſter of Defence preſently came, and amongſt all the gentlemen with his cap off, prayed maiſter *Vincentio*, that he would be pleaſed to take a quart of wine of him. *Vincentio* verie ſcornefully looking vpon him, ſaid vnto him. Wherefore ſhould you giue me a quart of wine? Marie Sir, ſaid he, becauſe I heare you are a famous man at your weapon. Then preſently ſaid the gentleman that ſent for the maiſter of Defence: Maiſter *Vincentio*, I pray you bid him welcome, he is a man of your profeſſion. My profeſſion ſaid *Vincentio*? what is my profeſſion. Then ſaid the gentleman, he is a maiſter of the noble ſcience of Defence. Why ſaid maiſter *Vincētio*, God make him a good man. But the maiſter of Defence wold not

not thus leaue him, but prayed him againe he would be pleaſed to take a quart of wine of him. Thē ſaid *Vincētio*, I haue no need of thy wine. Then ſaid the maiſter of Defence: Sir I haue a ſchoole of Defence in the towne, will it pleaſe you to go thither. Thy ſchoole, ſaid maiſter *Vincentio*? what ſhall I do at thy ſchoole? play with me (ſaid the maiſter) at the Rapier and Dagger, if it pleaſe you. Play with thee ſaid maiſter *Vincentio*? if I play with thee, I will hit thee 1. 2. 3. 4. thruſtes in the eie together. Then ſaid the maiſter of Defence, if you can do ſo, it is the better for you, and the worſe for me, but ſurely I can hardly beleeue that you can hit me: but yet once againe I hartily pray you good Sir, that you will go to my ſchoole, and play with me. Play with thee ſaid maiſter *Vincentio* (verie ſcornefully?) by God me ſcorne to play with thee. With that word ſcorne, the maiſter of Defence was verie much moued, and vp with his great Engliſh fiſt, and ſtroke maiſter *Vincentio* ſuch a boxe on the eare that he fell ouer and ouer, his legges iuſt againſt a Butterie hatch, whereon ſtood a great blacke Iacke: the maiſter of Defence fearing the worſt, againſt *Vincentio* his riſing, catcht the blacke Iacke into his hand, being more then halfe full of Beere. *Vincentio* luſtily ſtart vp, laying his hand vpon his Dagger, & with the other hand pointed with his finger, ſaying, very well: I will cauſe to lie in the Gaile for this geare, 1. 2. 3 4. yeares. And well ſaid the maiſter of Defence, ſince you will drinke no wine, will you pledge me in Beere? I drinke to all the cowardly knaues in *England*, and I thinke thee to be the verieſt coward of them all: with that he caſt all the Beere vpon him: notwithſtanding *Vincentio* hauing nothing but his guilt Rapier, and

Dagger about him, and the other for his defence the blacke Iacke, would not at that time fight it out: but the next day met with the maiſter of Defence in the ſtreete, and ſaid vnto him, you remember how miſuſed a me yeſterday, you were to blame, me be an excellent man, me teach you how to thruſt two foote further then anie Engliſhman, but firſt come you with me: then he brought him to a Mercers ſhop, and ſaid to the Mercer, let me ſee of your beſt ſilken Pointes, the Mercer did preſently ſhew him ſome of ſeauen groates a dozen, then he payeth fourteene groates for two dozen, and ſaid to the maiſter of Defence, there is one dozen for you, and here is another for me. This was one of the valianteſt Fencers that came from beyond the ſeas, to teach Engliſhmen to fight, and this was one of the manlieſt frayes, that I haue hard of, that euer he made in *England*, wherin he ſhewed himſelfe a farre better man in his life, then in his profeſſion he was, for he profeſſed armes, but in his life a better Chriſtian. He ſet forth in print a booke for the vſe of the Rapier and Dagger, the which he called his practiſe, I haue read it ouer, and becauſe I finde therein neither true rule for the perfect teaching of true fight, not true ground of true fight, neither ſence or reaſon for due proofe thereof. I haue thought it friuolous to recite any part therin contained: yet that the truth hereof may appeare, let two mē being wel experienced in the Rapier and Dagger fight, chooſe any of the beſt branches in the ſame booke, & make trial with force and agility, without the which the truth betweene the true & falſe fight cannot be knowne, & they ſhall find great imperfections therein. And againe, for proofe that there is no truth, neither in his rules, grouds

or Rapier-fight, let triall be made in this maner: Set two vnskilfull men together at the Rapier and Dagger, being valiant, and you ſhall ſee, that once in two boutes there ſhall either one or both of them be hurt. Then ſet two skilfull men together, being valiant at the Rapier and Dagger, and they ſhall do the like. Then ſet a skilful Rapier and Dagger-man the beſt that can be had, and a valiant man hauing no skill together at Rapier & Dagger, and once in two bouts vpon my credit in all the experience I haue in fight, the vnskilful man, do the other what he can for his life to the contrarie, ſhall hurt him, and moſt commonly if it were in continuance of fight, you ſhall ſee the vnskilfull man to haue the aduantage. And if I ſhould chuſe a valiant man for ſeruice of the Prince, or to take part with me or anie friend of mine in a good quarrell, I would chuſe the vnskilfull man, being vnencombred with falſe fights, becauſe ſuch a man ſtandeth free in his valour with ſtrength and agilitie of bodie, freely taketh the benefit of nature, fighteth moſt braue, by looſing no oportunitie, either ſoundly to hurt his enemie, or defend himſelfe, but the other ſtanding for his Defence, vpon his cunning Italian wardes, *Punta reuerſa*, the *Imbrocata*, *Stocata*, and being faſt tyed vnto theſe falſe fightes, ſtandeth troubled in his wits, and nature therby racked through the largeneſſe or falſe lyings or Spaces, whereby he is in his fight as a man halfe maimed, looſing the oportunity of times & benefit of nature, & whereas before being ignorant of theſe falſe Rapier fightes, ſtanding in the free libertie of nature giuen him by god, he was able in the field with his weapō to anſwere the valianteſt man in the world, but now being tied vnto that falſe fickle vncertaine fight, there-

Proofes againſt the Rapier fight.

by hath loſt in nature his freedome, is now become ſcarce halfe a man, and euerie boye in that fight is become as good a man as himſelfe.

Ieronimo this gallant was valiant, and would fight indeed, and did, as you ſhall heare. He being in a Coch with a wench that he loued well, there was one *Cheeſe*, a verie tall man, in his fight naturall Engliſh, for he fought with his Sword and Dagger, and in Rapier-fight had no skill at all. This *Cheeſe* hauing a quarrell to *Ieronimo*, ouertooke him vpon the way, himſelfe being on horſebacke, did call to *Ieronimo*, and bad him come forth of the Coch or he would fetch him, for he was come to fight with him. *Ieronimo* preſently went forth of the Coch and drew his Rapier and dagger, put himſelf into his beſt ward or *Stocata*, which ward was taught by himſelfe and *Vincentio*, and by them beſt allowed of, to be the beſt ward to ſtand vpon in fight for life, either to aſſault the enemie, or ſtand and watch his comming, which ward it ſhould ſeeme he ventured his life vpon, but howſoeuer with all the fine Italienated skill *Ieronimo* had, *Cheeſe* with his Sword within two thruſtes ran him into the bodie and ſlue him. Yet the Italian teachers will ſay, that an Engliſhmã cannot thruſt ſtraight with a Sword, becauſe the hilt will not ſuffer him to put the forefinger ouer the Croſſe, nor to put the thumbe vpon the blade, nor to hold the pummell in the hand, whereby we are of neceſſitie to hold faſt the handle in the hand: by reaſon whereof we are driuen to thruſt both compaſſe and ſhort, whereas with the Rapier they can thruſt both ſtraight and much further then we can with the Sword, becauſe of the hilt: and theſe be the reaſons they make againſt the Sword.

FINIS.

BREF INSTRUCTIONS

VPŌ MY PRADOXES OF DEFENCE for the true handling of all Mannr of weapons together wt the fower grownds & the fower gournors wch gouernours are left out in my pradoxes wtout the knowledge of wch no Man can fight ſaf

By *George Silver Gentleman*

[1599]

[Sloane MS. No. 376.]

TO THE READER.

FOr as much as in my padoxes of Defence I haue admonyſhed Men to take heede of falſe teachers of Defence, yet once againe in theſe my bref inſtructions I do the lyke, becauſe Diuers have wryten books treating of the noble ſcience of Defence, wherin they rather teach offence then Defence, rather ſhewing men therby how to be ſlayne than to defend them ſelues frō the Dang^r of their enemys, as we may dayly ſe to the great grief & ouerthrowe of many braue gentlemen & gallent of o^r ever victorious nation of great brytaine, And therfore for the great loue & Care y^t I haue for the well Doing & p^rſ,vation of my Countrymen, ſeeing their Dayly ruens & vtter ou^rthrow of Diu^rs gallant gent: & others w^ch truſt only to that Impfyt fyght of y^t Rapior, yeaſe although they Deyly ſe their owne ou^rthrowes & ſlaughter therby, yet becaus they are trayned vp therin, they thinke & do fully pſwade them ſelues that ther is no fight ſo excelent & wher as amongſt div^rs other their oppynyons y^t leadeth them to this errous on of y^t cheifeſt is, becauſe ther be ſo many ſlayne w^t theſe weapons & therfore they hold them ſo exelent, but theſe thinges do

cheifly happen, firſt becauſe their fyght is Imprfyt for that they vſe nether the prfyt gronds of true fyght, nether yet the 4 gou^rnors w^tout w^ch no man can fight ſaf, nether do they vſe ſuch other rules w^ch are required in the right vſe of prfyt defence, and alſo their weapons for y^e moſt prte beinge of an Imprfyt length, muſt of neceſſytie make an Imprfyt Defence becauſe they Cannot vſe them in due tyme & place, for had theſe valerous mynded men the right prfection of the true fyght w^t the ſhort ſword, & alſo of other weapons of prfyt length, I know y^t men would com ſaffer out of the field frō ſuch bloddye bankets & that ſuch would be their prfections her in, that it would ſaue many 100 mens lyues. But how ſhould men lerne prfection out of ſuch rules as are nothing els but very Imprfectiō it ſelf. And as it is not fyt for a man w^ch deſyreth y^e clere lyght of the Day to go downe into the bottom of a deepe & Darke Dungion, belyvinge to fynd it there, ſo is it as Impoſſyble for men to fynd the prfyt knowledge of this noble ſcience wher as in all their teachings every thinge is attempted & acted vpō Imprfyt rules, for ther is but one truth in all things, w^ch I wiſh very hartely were taught & practyſed here amongſt vs, & y^t thoſe Imprfyt & murtherous kynde of falſe fyghts might be by them abolyſhed. Leaue now to quaf & gull any Longer of that fylthy brynyſh puddle, ſeeing yō may now drink of y^t freſh & clere ſprynge.

O that men for their Defence would but geve their mynde to practiſe the true fyght in deed, & lerne to bere true brytiſh wards for thire defence, w^ch yf they had it in prfyt practyſe, I ſpeak it of myne owne knowledge y^t thoſe Imprfyt Italyon Devyſes w^t rapyor & ponyard would

would be clene caſt aſyde & of no account of al ſuch as blind offections do not lead beyond the bonds of reaſon. Therfore for the verye zealous & vnfayned loue yᵗ I beare vnto yoʳ high & royal prſon my Cuntrymen pytting their cauſes yᵗ ſo many braue men ſhould be dayly murthered, & ſpoyled for want of true knowledge of this noble ſcience & not as ſom Imagyn to be, only yᵉ excelence of yᵉ rapior fyght, & wher as my padoxes of defence is to the moſt ſorte as a darke ryddle in many things ther in ſet downe, therfore I have now this ſecond tyme taken ſom paynes to write theſe few breef Inſtructions ther vppō wher by they may the better attayne to the truth of this ſcyence & laying open here all ſuch things as was ſom thinge Intrycat for them to vndʳ ſtand in my pʳdoxes & therfor yᵗ I haue the ful prfectiō & knowledge of the prfyt vſe of all mannʳ of weapons, it Doth embolden me here in to wryte for the better Inſtructiō of the Vnſkylfull.

And I haue added to theſe my breef Inſtructions cʳtaine neceſarie admonytions wᶜʰ I wiſh every man not only to know but alſo to obſʳve & follow, Chiefly al ſuch as are deſyrous to enter into the right vſage & knowledge of their weapons, & alſo I haue thought it good to Annexe here vnto my pʳdoxes of Defence becauſe in theſe my bref Inſtructions, I haue referred yᵉ reader to divʳs rules ther in ſet down.

This haue I wryten for an Infallible truth & a note of remembrance to oʳ gallant gent: & others of oʳ brave mynded Nation of great bryttaine, wᶜʰ bere a mynde to defend them ſelues & to wyn honour in the feeld by their Actions of armes & ſyngle Combats.

And know yᵗ I write not this for vaineglorie, but out

of An entyre loue yᵗ I owe vnto my natyve Cuntrymen, as on who lamentith their Loſſes, ſorrye yᵗ ſo great an errour ſhould be ſo Carefully noryſhed as a ſᵗpant in their boſoms to their vttʳ confuſyō, as of long tyme haue byn ſeene, wher as yf they would but ſeeke the truth her in they were eaſyly abolyſhed, therfore follow the truth & fly Ignorance.

And conſydʳ yᵗ learnyng hath no greater enemye than Ignorance, nether can the vnſkylfull euer Judge the truth of my arte to them unknowen, beware of raſh Judgment & accept my labours as thankfully as I beſtow them willingly, cenſuer me Juſtly, let no man Diſpiſe my worke herin Cauſeles, & ſo I refere my ſelf to the cenſuer of ſuch as are ſkylful herin & ſo I cōmyt yō to the prtection of the almyghty Jehovah.

yoᵐ in al loue & fryendly Affectiō,

GEORGE SYLUER.

Admonytions

ADMONYTIONS
TO THE GENTLEMEN & BRAVE GALLANTS OF GREAT BRITAINE AGAINST QUARRELS & BRAULES WRITEN BY GEORGE SILUER. GENT.

WHeras I have declaired in my prdoxes of defence of the falſe teachinge of the noble ſcyence of defence vſed here by the Italyon fencers willing men therin to take heed how they truſted ther vnto wt ſuffytient reaſons & profs why.

And wher as ther was a booke wryten by Vincentio an Italiō teacher whoſe yll vſinge practiſes & vnſkylfull teaching were ſuch yt it hath coſt the lyves of many of or brave gentlemen & gallants, the vncrtaintye of whoſe falſe teaching doth yet remayne to ye dayly murthering & ouer throw of many, for he & the reſt of them did not teach Defence but offence, as it doth playnlye appere by thoſe yt follow the ſame Imprfyt fyght according to their teaching or inſtructiōs by the orders from them prceedinge, for be the actors yt follow them neuer ſo prfyt or ſkylfull therin one or both of them are eyther

ſore hurt or ſlaine in their Incountrs & fyghts, & yf they alledge yᵗ we vſe it not rightly according to yᵉ prfectiō therof, & therfore cannot defend oʳ ſelues, to wᶜʰ I anſwer yf themſelues had had any prfection therin, & that their teaching had byn a truth, themſelues would not have byn beaten & ſlayne in their fyghts, & vſing of their weapons, as they were.

And therfore I proue wher a man by their teaching can not be ſaf in his defence following their owne groundeof fyght then is their teaching offence & not defence, for in true fyght againſt the beſt no hurt can be don. And yf both haue the full prfection of true fyght, then the one will not be able to hurt the other at what prfyt weapon ſo ever.

For it cannot be ſayd yᵗ yf a man go to the feld & cannot be ſure todefend him ſelf in fight & to com ſaf home, yf goid be not againſt him whither he fyght wᵗ a man of ſkyll or no ſkil it may not be ſaid yᵗ ſuch a man is Maſtʳ of the Noble ſcyence of defence, or that he hath the prfection of true fyght, for yf both haue the prfection of their weapons, yf by any Device, on ſhould be able to hurt the other, ther were no prfection in the fyght of weapons, & this firmely hold in yoʳ mynd for a generall rule, to be the hayth & prfection of the true handling of al maner of weapons.

And alſo wheras yᵗ ſaid Vincentio in yᵗ ſame booke hath written diſcours of honour & honourable quarrels making many reaſons to prve meanes & wayes to enter yᵉ feeld & cōbat, both for the lye & other diſgraces, al wᶜʰ diabolicall devyces tendeth only to villayne & diſtruction as hurtynge, Maymynge & Murtheringe or kyllinge.

Annymating

Annymating ye mynds of yonge gentlemen & gallants to follow thoſe rules to maintaine their honors & credits, but the end ther of for the moſt prte is eyther kyllinge or hanginge or both to their vtter vndoinge & great gref of themſelues, & their friends, but then to late to call it againe. they conſyder not the tyme & place that we lyue in, nor do not throughly looke into the danger of the lawe til it be to late, & for that in diuers other cuntryes in theſe things they have a larger ſcope than we have in theſe our dayes.

Therfore it behoveth vs not upō euery abuſe offered wher by or bloud ſhalbe Inflamed, or or choler kindled prſently wt the ſword or wt the ſtabb, or by force of Armes to ſeeke Reuenge, wch is the propre nature of wild beaſts in their rage ſo to do, being voyde of the vſe of reaſon, wch thinge ſhould not be in Men of diſcreātiō ſo much to Degenerate, but he yt wil not endure an Iniurye, but will ſeeke revenge, then he ought to do it by Cyvill Order & prof, by good & holſom lawes, wch are ordayned for ſuch Cauſes, wch is a thinge far more fyt & requiſted in a place of ſo Cyvell a gouernment as we lyve in, then is the other, & who ſo followt theſe my Admonycions ſhalbe accounted as valyent a Man as heyt fyghteth & farr wyſer. for I ſee no reaſon why a Man ſhould adventure hys lyf & eſtate upō every tryfle, but ſhould rather put vp diuers abuſes offered vnto him, becauſe it is agreeable both to the Lawes of god & or Cuntrye.

Why ſhould not words be Anſwered wt words againe, but yf a Man by his enemye be charged wt blowes then may he Lawfully ſeeke the beſt meanes to defend him ſelf, & In ſuch a Caſe I hold it fyt to vſe his ſkyll & to ſhow his force by his Deeds, yet ſo, yt his dealynge be not

not wᵗ full Rygour to the others confuſyon yf poſſyblè it may be eſchewed.

Alſo take heed how yō appoynt the field wᵗ yoʳ Enemye publickly becauſe oʳ Lawes do not prmyt yt, neyther appoint to meet him in pryvat ſort leſt yō wounding him he accuſe yō of fellownye ſaying you have robbed him &c. Or he may laye companye cloſely to Murther you & then to report he dyd yt him ſelf valyently in the feeld.

Alſo take heed of thyne Enemyes Stratagems, leſt he fynd Meanes to make yō to looke a ſyde vpō ſomthing, or cauſe yō to ſhew whether yō have on a pʳvye Coate, & ſo when yō Looke from him, he hurt or kyll you.

Take not armes vpō euery light occaſyon, let not one fryend vpon a word or a tryfle violate another but let ech man zealouſly embrace fryendſhyp, & turne not famylyaritie into ſtrangnes, kyndnes into mallice, nor loue into hatred, noriſh not theſe ſtrange & vnnaturall Alterations.

Do not wyckedly reſolue one to ſeeke the others ou'throwe, do not confyrme to end thy Mallice by fyght becauſe for the moſt prte yᵗ endeth by Death.

Conſyder when theſe things were moſt vſed in former Ages they ſought not ſo much by envye the ruen & diſtruction on of another, they never tooke tryall by ſword but in defence of Innocencye to maintayne blotleſs honour.

Do not vpon Euery tryfle make an Action of revenge, or of Defyance.

Go not into the feeld wᵗ thy fryend at his Intreatye to take his prte but firſt know yᵉ mannʳ of yᵉ quarrell how Juſtly or vniuſtlye it grow, & do not ther in maintaine wronge

wronge againſt ryght, but examyne the cauſe of the contravercye, & yf ther be reaſon for his rage to lead him to y^t^ mortall reſolution.

Yet be the cauſe neuer ſo Juſt, go not w^t^ him neyther further nor ſuffer him to fight yf poſſyble it may by any meanes be otherwyſe ended & wyll him not to enter into ſo dangerous an action, but leue it till neccesytie requireth it.

And this I hold to be the beſt Courſe for it is fooliſhnes & endleſſe troble to caſt a ſtone at euerye Dogge y^t^ barks at you. this noble ſcyence is not to cauſe on man to abuſe another iniuriouſlye but to vſe it in their neceſſyties to defend them in their Juſt Cauſes & to maintaine their honour & Credits.

Therfore flye al raſhnes, pryde, & doynge of Iniurie all foule faults & errours herin, p^r^ſume not on this, & therbye to think it lawfull to offer Iniurye to Anye, think not yo^r^ſelf Invincible, but conſyder y^t^ often a verye wretch hath kylled a taule man, but he y^t^ hath humanytie, the more skylful he is in this noble ſcience, the more humble, modeſt, & V^r^tuous he ſhould ſhew him ſelf both in ſpeech & Action, no lyer, no vaunter nor quarreller, for theſe are the cauſes of Wounds, Diſhonour & Death.

Yf you talke w^t^ great men of honourable qualitie w^t^ ſuch chiefly haue regarde to frame yo^r^ ſpeeches & Anſwer ſo reverent, y^t^ a fooliſh word, or froward Anſwer geve no occaſyon of offence for often they breed Deadly hatred, Cruell murthers & extreem ruens &c.

Ever ſhun al occaſyons of quarrels, but marſhall men cheiflye generals & great comanders ſhould be exelent skylfull in the noble ſcience of defence, therby to be

able to anſwer quarrels, Combats & Chalenges in Defence of their prince & Cuntry.

Vale.

Bref Inſtructions vpō my pradoxes of Defence for the true handlyng of all Mann' of weapons together w' the fower grownds & the fower gou'nors w^ch gouernours are left out in my pradoxes w'out the knowledge of w^ch no Man can fight ſaf.

Cap. I.

The fower grownds or	1.	*Judgment*
principls of y' true	2.	*Diſtance*
fyght at all manner of	3.	*Tyme*
Weapons are theſe 4, viz.	4.	*Place.*

THe reaſon wherof theſe 4 grownds or p'nciples be the fyrſt & cheefeſt, are the followinge, becauſe through Judgment, yō kepe yo^r dyſtance, through Diſtance yō take yo^r Tyme, through Tyme yō ſafly wyne or gayne the Place of yo^r adu'ſarie, the Place beinge woon or gayned yō haue tyme ſafly eyther to ſtryke, thruſt, ward, cloze, grype, ſlyp or go back, in the w^ch tyme yo^r enemye is diſapoynted to hurt yō, or to defend himſelf, by reaſon that he hath loſt his true Place, the reaſon y^t he hath loſt his True place is by the length of Tyme

Tyme through the numbs of his feet, to wch he is of neceſſytie Dryven to yt wilbe Agent.

The 4 gouernors are thoſe yt follow.

1. The fyrſt gouernor is Judgment wch is to know when yor Adverſarie can reach you, & when not, & when yō can do the lyke to him, & to know by the goodnes or badnes of his lyinge, what he can do, & when & how he can prforme it.
2. The ſecond gouernor is Meaſure. Meaſure is the better to know how to make yor ſpace true to defend yor ſelf, or to offend yor enemye.
3. The third & fourth gouerners is a twyfold mynd when yō preſs in on yor enemye, for as yō have a mynd to go
4. forwarde, ſo yō muſt haue at yt inſtant a mynd to fly backwarde vpō any action yt ſhalbe offered or don by yor aduerſarie.

Certaine general rules wch muſt be obſyved in yt prfyt vſe of al kynde of weapons.

Cap. 2.

1. IYrſt when you com into the feeld to encounter wt yor Enemy, obſyve wel the ſcope, Evennes & vneunnes of yor grounde, put yorſelf in redynes wt yor weapon, before yor enemye Com wtin diſtance, ſet the ſvnn in his face travers yf poſſible yō can ſtill remembrynge yor gouernors.
2. Let al yor lyinge be ſuch as ſhal beſt like yorſelf, euer conſyderinge out what fyght yor Enemye chargeth yō, but be ſure to kepe yor diſtance, ſo yt nether hed, Armes,

hands, body, nor legges be wᵗin hys reach, but yᵗ he muſt fyrſt of neceſſytie put in his foote or feet, at wᶜʰ tyme yō haue the Choyſe of iij Actions by the wᶜʰ yō may endangʳ him & go free yoʳſelf.

"Put in his foot," i.e. advance.

"His cominge in." It muſt be remembered that in Silver's time the lunge was unknown, at leaſt to Engliſh fencers, & the only movements of the feet were "paſſes" and "traverſes," which with "ſlips" conſtituted a great part of the defence as well as of the attack.

1. The fyrſt is to ſtrike or thruſt at him, at yᵗ inſtant when he haue gayned yō the place by his cominge in
2. The ſecond is to ward, & Aftʳ to ſtrike or thruſt from yᵗ, remembringe yoʳ gouʳnors
3. The thyrd is to ſlippe alyttle backe & to ſtrike or thruſt after hym.

but euer remember yᵗ in the fyrſt motion of your Adverſarye towarde yō, yᵗ yō ſlyde a lyttle back ſo ſhall yō be pʳpred in due tyme to prforme anye of the iij Actions Aforeſaid, by diſappointynge him of his true place, whereby yō ſhall ſafelye defend yoʳſelfe & endanger him.

"Paſſes" were ſteps either forwards or backwards and the "traverſes" were ſteps in a lateral direction.

remember alſo yᵗ yf through fear or polyſye, he ſtrike or thruſt ſhort, & ther wᵗ go back, or not go back, follow him vpon yoʳ twofold gouʳnors, ſo ſhall yoʳ warde & ſlype be prformed in lyke mannʳ as before, & yoʳſelf ſtil be ſaf.

"Slips" were little ſhort ſteps either lateral or backwards. Theſe movements were alſo much uſed in feints of attack.

Kepe yoʳ dyſtance & ſuffer not yoʳ aduʳſarie to wyn or gayne the place of you, for yf he ſhall ſo do, he may endanger to hurt or kyll you. 3.

Know yᵗ the place is, when on may ſtryke or thruſt home wᵗout puttinge in of his foot.

"To wyn or gayne the place;" i.e. to come within ſtriking diſtance.

Yt may be obiected againſt thys laſt ground, yᵗ men do often ſtrike & thruſt at the half ſword & yet the ſame is prfytly defended, where to I anſwer yᵗ that defence is prfytly made by reaſon yᵗ the warder hath his true ſpace before the ſtryker or thruſter is in his force or entred into his action.

Therfore

Therfore alwaies do p^r^vent both blow & thruſt, the blow by true ſpace, & the thruſt by narrow ſpace y^t^ is true croſſinge it before the ſame com into their full force, other wyſe the hand of the Agent beinge as ſwyft as y^e^ hand of the patient, the hand of y^e^ Agent beinge the fyrſt mou^r^, muſt of neceſſytie ſtrike or thruſt y^t^ prte of y^e^ patient w^ch^ ſhalbe ſtryken or thruſt at becauſe the tyme of y^t^ hand to the tyme of y^e^ hand, beinge of lyke ſwyftnes the fyrſt mou^r^ hath y^e^ aduantage.

"Space" is the diſtance which the ſword blade has to traverſe in changing from one poſition to another: thus from "medium" to "quarte" or "tierce" would be a "narrow ſpace," while from "tierce" to "ſeptime" or from "ſeconde" to "quarte" would be a very "wyde ſpace."

4. When yo^r^ enemy ſhal preſs vpon you, he wilbe Open in one place or other, both at ſyngal & dubble weapon, or at the leaſt he wilbe to weake in his ward vpon ſuch p^r^ſſinge, then ſtrike or thruſt at ſuch open or weakeſt prte y^t^ yo ſhal fynd neereſt.

5. When yō attempt to wyn the place, do it vpon gard, remembringe yo^r^ gou^r^nors, but when he p^r^ſſeth vpō yō & gayneth yō The place, then ſtrike or thruſt at him in his cōmynge in,

A time hit or thruſt.

Or yf he ſhal ſtryke or thruſt at yō, then Ward it, & ſtryke or thruſt at him from yo^r^ warde, & fly backe Inſtantly accordinge to yo^r^ gou^r^nors, ſo ſhall yō eſcape ſaflie, for that the fyrſt Motion of the feete backwarde is more ſwyft, then the firſt motion of the feet forwarde, wher by yo^r^ regreſſyon wilbe more ſwyfter, then his courſe in prgreſſyon to Anoye you, the reaſon is, that in the fyrſt motyon of his prgreſſyon his Numb^r^ & Waight is greater then yo^rs^ are, in yo^r^ firſt motyon of yo^r^ regreſſyon, neu^r^theleſs al men knowe that the cō-tynual courſe of the feet forwarde is more ſwyft then the Contynuall Courſe of y^e^ feet backwards.

Parry and Ripoſte. Silver is very careful to emphaſiſe the neceſſity of "flying backe," i.e. getting away, immediately after an attack, whether it be ſucceſsful or otherwiſe.

6. yf yo^r^ enemye lye in varyable fyght, & ſtryke or thruſt at yō then be ſure to kepe yo^r^ Diſtance & ſtrike

Time hits & thruſts.

or thruſt at ſuch open prte of him as are neereſt vnto you, viz, at the hand, Arme, hed, or legg of him, & go back w^t all,

yf ij men fight at varyable fyght, & yf w^tin diſtance, they muſt both be hurt, for in ſuch fight they Cannot make a true Croſſe, nor haue tyme trulye to Judge, by reaſon y^t the ſwyft motyon of the hand, beinge a ſwyfter moue^r, then the eye Deceyveth the eye, at what weapon ſoeuer yō ſhal fyght w^t all, as in my pradoxes of defence in the chapter therof doth appere. 7.

The "gryp" is the ſeizing of the ſword-hilt with the left hand,— for this purpoſe a "guanto da preſa," or gripping gauntlet with the palm protected with fine mail, was ſometimes uſed.

Looke to the grype of yo^r Enemye, & vpō his ſlype take ſuch warde as ſhal beſt fyt your hand, from w^ch warde ſtrike or thruſt, ſtil remembrynge yo^r gouernors, 8.

yf yō can Indirect yo^r enemye at any kynde of weapon, then yō haue the aduantage, becauſe he muſt moue his feet to direct him ſelf Againe, & yō in the meane tyme may ſtrike or thruſt at him, & fly out faſt, before he can offer anything at you, his tyme wilbe ſo longe. 9.

To "indirect" is to either manœuvre or force him from the true line of direction.

A Demi-volte.

When you ſhall Ward blow or thruſt, made at yo^r right or left prte, w^t any kynd of weapon, rememb^r to Draw yo^r hynde foot a lyttle c^rculerlye, from that prte to w^ch the ſame ſhalbe made, wher by yō ſhall make yo^r defence the more prfyt, & ſhal ſtand the more Apt to ſtrike or thruſt from yt. 10.

A declaration of al the 4 generall fyghts to be vſed w^t the ſword at dubble or ſyngle, longe or ſhort, & w^t Certaine p^ticuler rules to them Annexed.

Cap. 3.

1. OPen fyght is to Carrye yo^r hand & hylt a loft aboue yo^r hed, eyther w^t poynt vpright, or point backwards w^ch is beſt, yet vſe that w^ch yō ſhall fynd moſt apteſt, to ſtrike, thruſt, or ward.

The "Guardia alta" of Marozzo & "Terza guardia" of Viggiani.

2. Gardant fyght in gen^rall is of ij ſorts, y^e fyrſt is true gardant fyght, w^ch is eyther prfyt or Imprfyt.

A "hanging" guard.

The prfyt is to carry yo^r hand & hylt aboue yo^r hed w^t yo^r poynt doune to wards yo^r left knee, w^t yo^r ſword blade ſomewhat neer yo^r bodye, not bearing out your poynt, but rather declynynge in a lyttle towards yo^r ſaid knee, y^t yo^r enemye croſe not yo^r poynt & ſo hurt you, ſtand bolt vpright in this fyght, & yf he offer to preſſe in then bere yo^r hed & body a lyttle backwarde.

"True gardant" is a High Prime.

Command.

The Imprfyt is when yō bere yo^r hand & ſword hylt prfyt hayth aboue yo^r hed, as aforeſayd but leanynge or ſtoopinge forwarde w^t yo^r body & therby yo^r ſpace wilbe to Wyde on both ſyds to defend the blow ſtryken at the left ſyde of yo^r hed or to wyde to defend a thruſt from the ryght ſyde of the body,

To ſtand with the body leaning forward is an "imperfect" poſition.

Alſo it is Imprfyt, yf yō bere yo^r hand & hylt as aforeſayd, berynge yo^r poynt to farr out from yo^r knee, ſo y^t yo^r enemy May Croſs, or ſtrike Aſyde yo^r poynt, & therby endanger you,

The

"Baſtard gardant" is a kind of high ſecunde, but more central.

The ſecond is baſtard gardant fyght wᶜʰ is to Carrye yoʳ hand & hylt below yoʳ hed, breſt hye or lower wᵗ yoʳ poynt downwarde towarde yoʳ left foote, this baſtard gardant ward is not to be vſed in fyght, ecept it be to Croſſe yoʳ enemyes Ward at his comynge in to take the grype of him or ſuch other advantage, as in diuʳs placs of yᵉ ſword fyght is ſet forth.

"Forehand ward" is a medium guard.

Cloſe fyght is when yō Croſs at yᵉ half ſword eyther aboue at forehand ward yᵗ is wᵗ poynt hye, & hande & hylt lowe, or at true or baſtard gardant ward wᵗ both yoʳ poynts doun. 3.

Cloſe is all mannʳ of fyghts wherin yō have made a true Croſe at the half ſword wᵗ yoʳ ſpace very narrow & not Croſt, is alſo cloſe fyght. 4.

The Italian terms were imperfectly underſtood in England at the end of the XVIth century, & Silver has evidently miſconſtrued them.

Variable fyght is al other mannʳ of lyinge not here before ſpoken of, wher of theſe 4 that follow are the cheefeſt of them.

"Quinta guardia" of Capo Ferro.

Stocata: wᶜʰ is to lye wᵗ yoʳ right legge forwarde, wᵗ yoʳ ſword or rapior hylt back on the out ſyde of yoʳ right thygh wᵗ yoʳ poynt forewarde to ward yoʳ enemye, wᵗ yoʳ daggʳ in yoʳ other hand extendinge yoʳ hand to wards the poynt of yoʳ rapior, holdinge yoʳ daggʳ wᵗ yᵉ poynt vpright wᵗ narrow ſpace betweene yoʳ rapior blade, & the nayles of yoʳ daggʳ hand, kepynge yoʳ rapior poynt back behind yoʳ daggʳ hand yf poſſyble, (1.)

"Prima guardia" of Capo Ferro, "Guardia alta" of Alfieri, & "Guardia di becha poſſa" of Marozzo.

Or he may lye wyde below vndʳ his daggʳ wᵗ his rapior poynt doun towards his enemyes foote, or wᵗ his poynt fourth wᵗ out his daggʳ.

"Quarta guardia" of Alfieri.

Imbrocata: is to lye wᵗ yoʳ hylt hyer then yoʳ hed, beringe yoʳ knuckles vpwarde, & yoʳ point depending towarde yoʳ Enemys face or breſt.

Mountanta: is to Carrye yoʳ rapior pummell in the palm

palm of yo^{r} hand reſting it on yo^{r} lyttle fynger w^{t} yo^{r} hand belowe & ſo movntynge it vp a loft, & ſo to com in w^{t} a thruſt vpō yo^{r} Enemyes face or breſt, as out of y^{e} Imbrocata.

4. Paſſata; is eyther to paſs w^{t} y^{e} Stocata, or to carrye yo^{r} ſword or rapior hylt by yo^{r} right flanke, w^{t} yo^{r} poynt directly againſt yo^{r} Enemyes belly, w^{t} yo^{r} left foote forwarde, extendinge fourth yo^{r} dagg^{r} hand w^{t} the poynt of yo^{r} dagger forwarde as yō do yo^{r} ſword, w^{t} narrow ſpace between yo^{r} ſword & dagg^{r} blade, & ſo to make yo^{r} paſſage vpon him,

The "ſhort ſyngle ſword fight" was a fight with a one-hand ſword, and without the aſſiſtance of a defenſive weapon in the left hand.

Alſo any other kynd of varyable fyght or lyeinge whatſoeuer a man can deviſe not here expreſſed, is cōtayned vnder this fight.

The "ſword dubble" is any kind of ſingle-hand ſword aſſiſted by a defenſive weapon in the other.

Of the ſhort ſyngle ſword fyght againſt the lyke weapon.

Cap. 4.

1. IF yo^{r} enemye lye a loft, eyther in open or true gardant fight, & then ſtrike at the left ſyde of yo^{r} hed or body yo^{r} beſt ward to defend yo^{r} ſelf, is to bere it w^{t} true gardant ward, & yf he ſtrike & com in to the cloze, or to take the grype of you yō may then ſafly take the grype of him as it appereth in the chapter of the grype,

A high prime.

2. but yf he do ſtrike & not com in, then inſtantly vpō yo^{r} ward, vncroſe & ſtrike him either on the right or left ſyde of y^{e} hed, & fly out inſtantly.

A direct "ripoſte." "Fly out" ſuggeſts a lateral movement of the feet, but might alſo mean a backward one.

3. Yf yō bere this w^{t} forhand ward, be ſure to ward his blowe, or kepe yo^{r} diſtance, otherwyſe he ſhall decue

you w^t^ euery falſe, ſtil endangeringe yo^r^ hed, face, hand, Armes, bodye, & bendynge knee, w^t^ blow or thruſt. Therfore kepe well yo^r^ dyſtance, becauſe yō can very hardly deſerne (being w^t^ in dyſtance), by w^ch^ ſyde of yo^r^ ſword he will ſtryke, nor at w^ch^ of thoſe prts aforeſayd, becauſe the ſwyft motion of y^e^ hand deceyveth the eye,

A ſimilar guard is favoured by ſome modern Auſtrian ſabre players.

yf he lye a loft & ſtrike as aforeſaid at yo^r^ head, yō may endanger him yf yō thruſt at his hand, hilt, or Arme, turninge yo^r^ knuckles dounwarde, but fly back w^t^ all in the inſtant y^t^ yō thruſt, 4.

A time thruſt in "quarte" at the ſword hand.

yf he lye a loft as aforeſaid, & ſtrike a loft at the left ſyde of yo^r^ hed, yf yō wil ward his blow w^t^ forehand ward, then be ſure to kepe yo^r^ diſtance, except he com ſo c^r^taine that yō be ſure to ward his blow, at w^ch^ tyme yf he com in w^t^ all, yō may endanger him from y^t^ ward, eyther by blow, thruſt or grype, 5.

A "quarte" parry, followed by "ripoſte" or "grip."

yf he lye a loft & yō lye a lowe w^t^ yo^r^ ſword in the varyable fyght, then yf yō offer to ward his blow made at yo^r^ hed, w^t^ true gardant ward yo^r^ tyme wilbe to longe Due in tyme to make a ſure ward, for that it is bett^r^ to bere it w^t^ forehand ward, but be ſure to kepe yo^r^ diſtance, to make him com in w^t^ his feet, wher by his tyme wilbe to longe to do y^t^ he intendeth. 6.

yf ij Men fight both vpō open fyght he y^t^ firſt breaketh his diſtance, yf he attempt to ſtryke at the others hed, ſhalbe ſurely ſtryken on the hed himſelf, yf the patient Agent ſtrike ther at in his Comynge in, & ſlyp a lyttle back w^t^ all, for y^t^ ſlydinge back maketh an indirection, wherby yo^r^ blow Croſſeth his hed, & maketh a true ward for yo^r^ owne, this will yt be, becauſe of his length of tyme in his cōmynge in, 7.

A time hit with "oppoſition."

Alſo

8. Alſo yf ij fyght vpon open fyght, it is better for the patient to ſtrike home ſtrongly at the Agents hed, when the ſaid Agent ſhal preſs vpon him to wyn the place then to thruſt, becauſe the blow of the patient is not only hurtful to the Agent, but it alſo maketh a true Croſe to defend his owne hed,

9. yf he charge yō a loft, out of the open or true gardant fyght, yf yō anſwer him wᵗ yᵉ Imprfyt gardant fyght, wᵗ yoʳ body leanynge forwarde, yoʳ ſpace wilbe to wyde on both ſyde to make a true ward in due tyme, & yoʳ arme And body wilbe to neere vnto him, ſo that wᵗ the bending in of his body wᵗ the tyme of hand & foote, he may take the grype of you,

but yf yō ſtand vpright in true gardant fyght, then he cannot reach to take the grype of you, nor otherwiſe to offend yō yf you kepe yoʳ diſtance, wᵗout puttinge in of his foote or feete wherin his number wilbe to great, & ſo his tyme wilbe to longe, & yō in that tyme may by puttinge in of yoʳ body take the grype of him, yf he preſs to com in wᵗ vſing only yoʳ hand, or hand & foote, & ther vpon yō may ſtryke or thruſt wᵗ yoʳ ſword & fly out wᵗ all accordinge to yoʳ governors, ſe more of this, in the chapter of the grype.

"Number wilbe to great," i.e. will have to make too many ſteps or paſſes.

10. yf he wil ſtil prſſe forcibly a loft vpō you, Charginge yō out of the open fyght or true gardant fyght, Intendinge to hurt yō in the face or hed, or to take the grype of yō Againſt ſuch a on, you muſt vſe both gardant & open fyght, wherby vpon euery blow or thruſt that he ſhall make at you, you may from yoʳ wards, ſtrike or thruſt him on the face hed or bodye as it appeareth more at large in the 5ᵗʰ Chapter of theſe my Inſtructions.

11. yf yō fyght wᵗ on yᵗ ſtandeth only vpon his gardant fyght *A variety of*

guards to be uſed in order to prevent fatigue.

or yf he ſeeke to com in to yō by the ſame fyght, then do yō ſtrike & thruſt Contynually at al mann^{r} of open place that ſhall com neereſt vnto you, ſtill remembringe yo^{r} gou^{r}nors, ſo ſhall he Contynually be in dang^{r}, & often wounded, & weryed in that kynd of fyght, & you ſhalbe ſaf, the reaſon is, he is a c^{r}taine marke to you, & yō are an vnc^{r}taine marke to hym.

And further becauſe he tyeth him ſelf vnto on kynd of fyght only, he ſhalbe wearyed for want of Change of lyinge, & yō by reaſon of many changes ſhal not only ſtyll fyght at eaſe, & much more braue, but you haue lykewyſe iiij fyghts to his one, to wytt, gardant, open, cloſe, & variable fyght, to his gardant only, therfore y^{t} fight only is not to be ſtode vpon or vſed.

But yf althis will not ſ^{r}ue, & although he hath receyved Many Wounds, wyl contynually run on to com in, & forcibly breake yo^{r} dyſtance, then may you ſaffly take the grype of him, & hurt him at yo^{r} pleaſure w^{t} yo^{r} ſword, as appeareth in the chapter of the grype, & he can nether hurt nor take y^{e} grype of yō, becauſe the numb^{r} of his feet are to many, to bringe his hand in place in due tyme, for ſuch a on ever geueth yō the place, therfore beſure to take yo^{r} tyme herin. 12.

In "Sword and Buckler" or "Sword and Dagger" fighting, ſtrike with the defenſive weapon inſtead of gripping, and trip up his heels. Lonergan, 1771. "ſyck fyt" (ſic fit).

In the lyke ſort may yō do at ſword & dagg^{r}, or ſword & buckler, at ſuch tyme as I ſay, y^{t} yō Maye take the grype at the ſyngle ſword fyght, yō may then inſteed of the grype, ſoundly ſtryke him w^{t} yo^{r} buckler on the hed or ſtabb him w^{t} yo^{r} dagg^{r} & inſtantly eyther ſtryke vp his heeles or fly out, & as he lyketh y^{t} coolinge card to his hot braine, ſyck fyt, ſo let him com for another.

yf ij fyght & that both lye vpō the true gardant fyght & that one of them will neede ſeek to wyn the half ſword 13.

ASTOR, LENOX AND
TILDEN FOUNDATIONS

by preſſinge in, yᵗ may yō ſaflye do, for vpō yᵗ fyght the half ſworde may ſafflye be woon, but he yᵗ firſt cōmeth in, Muſt fyrſt go out, & yᵗ prſently, otherwiſe his gard wilbe to wyde aboue to defend his hed, or yf fyt for yᵗ defence, then wil it be to wyde vndrneath to defend yᵗ thruſt frō his body wᶜʰ things the patient Agent may do, & fly out ſaf, & yᵗ Agent cannot avoyd it, becauſe the moving of his feet maketh his ward vnequall to defend both prts in due tyme, but the one or the other wilbe diſceived & in danger, for he being Agent vpon his firſt entrance his tyme (by reaſon of yᵗ numbr of his feet), wilbe to longe, ſo yᵗ yᵉ patient Agent may firſt enter into his action, & the Agent muſt be of force an after doer, & therfore cannote avoyde this offence aforeſaid.

The "patient Agent" is the man who ſtands upon the defenſive, the "Agent" being the one who attacks.

14. yf he com in to encounter the Cloze & grype vpō yᵉ baſtard gardant ward, then yō Maye Croſſe his blade wᵗ yorˢ vpō the lyke gardant ward alſo, & as he cometh in wᵗ his feet & haue gayned yō the place, yō may prſently vncroſſe & ſtryke him a ſound blowe on yᵉ hed, & fly out inſtantly, wher in he cannot offend yō by reaſon of his loſt tyme, nor defend him ſelf vpon yorˢ vncroſſing, becauſe his ſpace is to wyde wherby his tyme wilbe to longe in due tyme to prvent yor blowe, this may yō do ſafly.

15. yf he cō in vpon the baſtard gardant ward, bearing his hylt lower than his hed, or but breſt hye or lower, then ſtrik him ſoundly on the hed wᶜʰ thinge yō may eaſylye do, becauſe his ſpace is to wyde in due tyme to ward the ſame.

16. yf yor Enemy charge you vpō his Stocata fyght, yō May ly variable wᵗ large Diſtance & vncrtaine wᵗ yor ſword & bodye at yor pleaſure, yet ſo yᵗ yō may ſtryke,

thruſt or Ward, & go forth & back as occaſion is, to take y^e^ advantage of this cõmynge in, whether he doth it out of the Stocata, or paſſata, w^ch^ advantage yõ ſhalbe ſure to haue, yf yõ obſrue this rule & be not to raſh in yo^r^ actions, by reaſon y^t^ y^e^ numb^r^ of his feet wilbe great, & alſo becauſe when thoſe ij fyghts are met together, it is hard to Make a true Croſſe, therfore w^t^out Large dyſdance be kept of them, Commonly they are both hurt or ſlayne, becauſe in narrow diſtance their hands haue free Courſe & are not tyed to the tyme of y^e^ foote, by w^ch^ ſwyft motion of the hand the eye is deceyved, as yõ may read more at large in the cap: of my prdoxes of defence.

"The number of his feet will be great"—i.e. he will have to make too many ſteps or "paſſes."

You may alſo vſe this fyght, againſt the longe ſword, or longe rapior, ſyngle & dubble,

vpon this ground ſom ſhallow wytted fellow may ſay, yf the patient muſt keep large diſtance then he muſt be dryven to goback ſtyll, to w^ch^ I anſwer y^t^ in the contynnuall motion & travers of his ground he is to travers circuler wyſe, forwards, backwards, vpõ the right hand, & vpõ the left hand, the w^ch^ travers is ſtill a certaintye to be vſed w^t^in him ſelf, & not to be p^r^vented by y^e^ Agent, becauſe the Agent cõmeth one vpõ an vnc^r^taine marke, for when he thinketh to be ſure of his purpoſe, the patient is ſomtymes on the on ſyde, & ſom tymes on y^e^ other ſyde, ſomtymes to far back, & ſomtymes to neere, ſo y^t^ ſtil the Agent muſt vſe the numb^r^ of his feet w^ch^ wilbe to longe to anſwer y^e^ hand of y^e^ patient Agent, & it cannot be denyed but the patient Agent by reaſon of his large diſtance, ſtil ſeeth what y^e^ Agent doth in his cõmyng, but the Agent cannot ſe what the other doth, til the patient Agent be into his Action, therfore

This is exactly the traverſe recommended by Roworth.

to

to late for him eyther to hurt the patient, or in due tyme to defend him ſelf, becauſe he entreth his actiō vpō yᵉ knowledge of the patient, but he knowᵗ not what yᵉ patient Agent will do til it be to late.

17. yf the Agent ſay yᵗ then he wil ſtand faſt vpon ſom ſure gard & ſomtymes moving & travᵗſing his ground, & kepe large diſtance as yᵉ patient do, to wᶜʰ I anſwer, yᵗ when ij men ſhal meete yᵗ haue both the prfection of their weapons, againſt the beſt no hurt canbe don, other wiſe yf by any deviſe on ſhould be able to hurt theother, then werther no prfection in yᵉ vſeofweapons, this prfection of fyght being obſrved, pᵗventeth both cloſe fyght, & al mannᵗ of clozes, grype & wreſtling & al mannᵗ of ſuch other devics what ſo euer.

18. Alſo yf he charge yō vpō his Stocata, or any other lying aftᵗ yᵗ faſhion, wᵗ his poynt low & large paced, then lye yō a loft wᵗ yoᵗ hand & hylt aboue yoᵗ hed, eyther true gardant, or vpō the open fight, then he cannot reach yō yf yō kepe yoᵗ diſtance wᵗout putting in of his foot or feet, but yō may reach him wᵗ the tyme of yoᵗ hand, or wᵗ the tyme of your hand & body, or of hand, body & foot, becauſe he hath al redy put in his body wᵗin yoᵗ reach & haue gayned yō the place, & yō are at lybertye & wᵗout his reach, til he put in his foot or feete, wᶜʰ tyme is to longe to anſwer the tyme of yoᵗ hand, & his ſpace to wyde in that place to make a ward in due tyme to defend his hed, Armes & hande, one of wᶜʰ wilbe alwaies wᵗ in yoᵗ reach.

note ſtil in this yᵗ yoᵗ weapons be both ſhort of yᵉ Equal & convenient length of yᵉ ſhort ſword.

19. yf out of his varyable fyght he ſtrike at yᵉ right or left ſyde of the hed or body, then yoᵗ beſt ward is to bere

Parries of "tierce" and of "quarte."

bere it wt fore hand ward, otherwiſe yor ſpace wilbe to wyde & to far to make yor ward in due tyme.

Yf he lye variable aftr the mannr of the paſſata then yf yō lye a loſt as is aboue ſaid, yō haue the Advantage, becauſe he yt lyeth varyable cannot reach home, at hed hand or arme, wtout putting in of his foote or feet, & therfore it cannot be denyed, but yt he yt playeth aloft, hath ſtil the tyme of the hand to the tyme of ye foot, wch fight beinge truly handled is aduantage invincible. 20.

Yf he lye variable vpō the Imbrocata, then make a narrow ſpace wt yor poynt vpwarde, & ſodainly yf yō can Croſe his poynt wt yor blade put aſyde his poynt ſtrongly wt yor ſword & ſtrik or thruſt at him, & fly out inſtantly, euer remembring yor gouernors yt hē deceve yō not in taking of his poynt. 21.

From this it appears that in Silver's time the knees were very little bent.

yf he ſtrike or thruſt at yor lege or lower prte out of any fyght, he ſhal not be able to reach the ſame vnleſs yō ſtand large paced wt bendinge knee, or vnleſs he com in wt his foote or feete, the wch yf he ſhal ſo do, then yō may ſtrik or thruſt at his arme or vpper prte for then he putteth them into the place gayning yō the place wherby you may ſtrike home vpō him & he cannot reach yō. 22.

A time hit or thruſt at the arm or upper parts.

but yf he ſtand large paced wt bendinge knee then wyn the place & ſtrike home freely at his knee, & fly back ther wt.

Forcible preſſure in "tierce" at "half-ſword."

yf he com to the cloſe fight wt yō & yt yō are both croſt aloft at ye half ſword wt both yor points vpwards, then yf he com in wt all in his Croſſing bere ſtrongly yor hand & hylt our his wriſt, cloſe by his hylt putting it ouer at ye backſyde of his hand & hylt prſſinge doune his hand & hylt ſtrongly & ſodainly, in yor entring in, & ſo 23.

& ſo thruſt yo^{r} hylt in his face, or ſtrike him vpō y^{e} hed w^{t} y^{r} ſword, & ſtrike vp his heeles, & fly out, *Recommended alſo by Lonergan, 1771.*

24. yf yō are both ſo croſt at y^{e} baſtard gardant ward, & yf he then preſs in, then take the grype of him as is ſhewed in y^{e} chapter of y^{e} grype,

Or w^{t} yo^{r} left hand or arme, ſtrike his ſword blade ſtrongly & ſodainly towarde yo^{r} left ſyde by w^{ch} meanes yō are uncroſt, & he is diſcou^{r}ed, then may yō thruſt him in the body w^{t} yo^{r} ſword & fly out inſtantly, w^{ch} thinge he cannot avoyd, nether can he offend yō *Beating the ſword away with the gauntleted left hand.*

Or being ſo croſt, yō may ſodainly vncroſe & ſtrike him vpō the hed & fly out inſtantly w^{ch} thinge yō may ſafly do & go out free. *An alternative.*

25. yf yō be both croſt at y^{e} half ſword w^{t} hys poynt vp & yo^{r} poynt doune in the true gardant ward, then yf he preſs to com in, then eyther take y^{e} grype of him, as in the chapter of the grype, or w^{t} yo^{r} left hand or arme, ſtrike out his ſword blade towards yo^{r} left ſyde as aforeſaid, & ſo yō may thruſt him in the body w^{t} yo^{r} ſword & fly out inſtantly. *Again the alternatives of "gripping" and beating the ſword off.*

26. Do yō neuer attempt to cloze or com to y^{e} grype at theſe weapons vnleſs it be vpō the ſlow motiō or diſorder of yo^{r} enemye,

but yf he will cloze w^{t} you, then yō may take the grype of him ſafly at his cōmynge in, for he y^{t} firſt by ſtronge preſſing in adventureth the cloze looſeth it, & is in great danger, by reaſon y^{t} the numb^{r} of his feet are to great, wherby his tyme wilbe to longe, in due tyme to anſwer the hand of y^{e} patient Agent, as in the chapter of the grype doth plainly appere, *When he encloſes, "grip" him.*

27. Alwaies remembring yf yō fyght vpō the variable fight y^{t} yō ward vpō forehand ward, otherwiſe yo^{r} ſpace

wilbe to wyde in due tyme to make a true gardant ward, to defend yo^{r} ſelf.

yf yō fyght vpō open fyght, or true gardant fyght, neuer ward vpō forehand ward for then yo^{r} ſpace wilbe to wyde alſo, in due tyme to make a ſureward, 28.

yf he lye aloft w^{t} his poynt towarde you, aft^{r} the mann^{r} of the Imbrocata, then make yo^{r} ſpace narrow w^{t} yo^{r} point upwarde & put by his poynt, & ſtrike or thruſt as aforeſaid but be ſure herin to kepe yo^{r} diſtance, y^{t} he deceue you not in taking of his poynt. 29.

"Parrying" and "Ripoſting."

Of div^{ſ} aduantages y^{t} you may take by ſtrykinge frō yo^{r} warde at y^{t} ſword fyght.

Cap. 5.

A parry in "high tierce" with its ripoſtes.

YF yo^{r} enemy ſtrike at the right ſyde of yo^{r} hed, yō lyinge true gardant, then put yo^{r} hilt a little doune, Mounting yo^{r} poynt, ſo that yo^{r} blade May Croſſe a thwart yo^{r} face, ſo ſhal yō make A true ward for the right ſyde of yo^{r} hed, from the w^{ch} ward yō may inſtantly ſtrike him on the ryght or left ſyde of the hed, or to turne doune yo^{r} poynt, & thruſt him in the bodye, or you may ſtrike him on the left ſyde of the body, or on the out ſyde of his left thygh. 1.

Or yō may ſtrike him on the out ſyde of the right thygh, on of thoſe he cannot avoyd yf he fly not back inſtantly vpō his blowe, becauſe he know^{t} not w^{ch} of theſe the patient Agent wil do.

A parry of "prime" with its ripoſtes.

Yf yō lye vpō yo^{r} true gardant ward, & he ſtrike at the left ſyde of yo^{r} hed, yō haue the choyſe from yo^{r} ward to ſtrike him from yt, on the right or left ſyde of 2.

the

the hed, or to turne doune yo^{r} poynt, & thruſt him in the bodye, or yō May ſtryke him on the out ſyde of the right or left thygh, for the reaſon aboue ſayde in the laſt rule, except he fly out inſtantly vpō his blowe.

3. Yf he charge yō vpon the open or true gardant fyght, yf yō wil anſwer him w^{t} the lyke, then kepe yo^{r} diſtance, & let yo^{r} gatheringe be all waies in y^{t} fyght to warde his right ſyde ſo ſhal yō w^{t} yo^{r} ſword choake vp any blowe that he can make at yō, from the w^{ch} ward yō May ſtryke him on the right or left ſyde of y^{e} hed, or thruſt him in the bodye.

but yf he thruſt at your face or body, then yō may out of yo^{r} gardant fight break it doun warde w^{t} yo^{r} ſword bering yo^{r} poynt ſtrongly towarde yo^{r} right ſyde, from the w^{ch} breaking of his thruſt yō may likwiſe ſtrike him frō the right or left ſyde of y^{e} hed, or thruſt him in the bodye. *A thruſt parried with the "ſeconde," and its ripoſtes.*

4. Yf yō meet w^{t} on y^{t} cannot ſtrike frō his warde, vpō ſuch a on yō may both dubble & faulſe & ſo deceue him, but yf he be skylful yō muſt not do ſo, becauſe he wilbe ſtil ſo vncr̄taine in his traverſe that he will ſtyll p^{r}vent you of tyme & place, ſo y^{t} when yō think to dubble & falſe, yō ſhal gayne him the place & ther vpō he wilbe before yō in his action, & in yo^{r} comynge he will ſtil endanger yō, *To "dubble" = to "remiſe." To "faulſe" = to "feint."*

5. yf yō fyght vpō the variable fyght, & that yō receue a blow w^{t} forehand ward, made at the right ſyde of yo^{r} hed or body, yō haue y^{e} choiſe of viij offenciue Actions frō y^{t} ward, the firſt to ſtryke him on the right ſyde, eyther on the hed ſhould^{r}, or thygh, or to thruſt him in the body, or to ſtryke him on the left ſyde either on the hed ſhold^{r} or thygh, or to thruſt him in the body, *A parry of "tierce" with its ripoſtes.*

243646B

Parry of "quarte."

the lyke may yō do yf he ſtrike eu^r at yo^r left ſyde, as is aboue ſaid, yf yō bere it w^t fore hand ward.

In this forehand ward kepe yo^r diſtance, & take heed 6.
y^t he deceyue yō not w^t the dounright blowe at yo^r hed out of his open fyght, for being w^t in diſtance y^e ſwift motion of y^e hand May deceue yo^r eye, becauſe yō know not by w^ch ſyde of yo^r ſword his blow wil com

Alſo ſe y^t he deceue yō not vpō any falſe offerynge to 7.
ſtryke at the on ſyde, & when therby yō haue turned yo^r poynt aſyde, then to ſtrike on the other ſyde, but yf yō kepe diſtance yō are free from y^t, therfore ſtyll in all yo^r actions remembr y gou^rnors

yf he wil do nothinge but thruſt, Anſwer him as it 8.
is ſet doune in the 16^th ground of y^e ſhort ſword fyght & alſo in div^rs places of the 8^th chapt^r.

How to engage with a man who uſes point.

Alſo conſyder yf he lye at the thruſt vpon y^e ſtocata, 9.
or paſſata, & yō haue no waye to avoyde him, except yō can Croſſe his ſword blade w^t yo^rs, & ſo Indirect his poynt, therfore kepe narrow ſpace vpō his poynt, & kepe well yo^r diſtance in vſing yo^r travers.

but yf he put forth his poynt ſo y^t yō may Croſs it w^t fore hand ward, for yf yō wacth for his thruſt then lye vpō forehand ward w^t poynt alittle vp. yf he lye w^t his poynt Mounted, & yf yō ſyngle yo^r thruſt vpō the out ſyde of yo^r ſword to warde yo^r right ſyde, or back of yo^r ſword hand, ſtrike or bere his poynt out towarde yo^r right ſyde, & ther vpon putting forward yo^r body & left foote Circuler wyſe to warde his right ſyde yō May ſtrike him vpō his ſword Arme, hed, face or bodye.

A "demivolte" after a parry of "quarte."

Or yf yō take it on the Inſyde of yo^r ſword blade to warde yo^r left ſyde then w^t yo^r ſword put by his poynt ſtrongly & ſodainly towarde yo^r left ſyde, drawing

yo^r

yo^{r} left foote Circuler wyſe back behind the heele of yo^{r} right foote, & ſtrike him on the inſyde of his ſword hand or Arme or on the hed, face, or body, & fly out accordinge to yo^{r} gou^{r}nors

This May yō vſe againſt y^{e} ſword & dagg^{r} longe or ſhort, or rapior & ponyard, or ſword & buckler.

10. Alſo remembr yf he haue a longe ſword, & yō a ſhort ſword, euer to Make yo^{r} ſpace ſo narrow, y^{t} yō may alwaies break his thruſt before y^{t} be in force yf poſſible yō may, & alſo to kepe large diſtance whether he charge yō out of the Stocata, paſſata, or Imbrocata &c,

of this yō may ſe more at large in the 8th chapter.

The mann^{r} of Certaine gryps & Clozes to be vſed at y^{e} ſyngle ſhort ſword fyght &c.

Cap. 6.

1. IF he ſtrike aloft at the left ſyde of yo^{r} hed, and run in w^{t} all to take the Cloze or grype of you, then ward it gardant, & enter in w^{t} yo^{r} left ſyde puting in yo^{r} left hand, on the inſyde of his ſword Arme, neere his hylte, bering yo^{r} hand ou^{r} his Arme, & Wrape in his hand & ſworde vnd^{r} yo^{r} Arme, as he cometh in, Wreſting his hand & ſword cloſe to your bodye turninge back yo^{r} right ſyde from him, ſo ſhal he not be able to reach yo^{r} ſword, but yō ſhall ſtyll haue it at lybertye to ſtryke or thruſt him & endanger the breakinge of his Arme, or the takinge away of his ſword by y^{t} grype.

2. Yf yō are both Croſt in Cloſe fyght vpon the baſtard gardant ward alowe, yō May put yo^{r} left hand on the out ſyde of his ſword at the back of his hand, neere or

at the hylte of his ſword Arme & take him on the inſyde of y^t^ arme w^t^ yo^r^ hand, aboue his elbowe is beſt, & draw him in towarde yō ſtrongly, wreſtinge his knuckles dounwarde & his elbowe vpwarde ſo may yō endang^r^ to breake his arme, or caſt him doune, or to wreſt his ſword out of his hand, & go free yo^r^ ſelf.

in like ſort vpō this kynd of cloze, yō may clape yo^r^ 3. left hand vpō the wriſt of his ſword arme, holding it ſtrongly & ther w^t^ thruſt him hard from yō, & p^r^ſently yō may thruſt him in the body w^t^ yo^r^ ſword for in y^t^ Inſtant he can nether ward, ſtrike, nor thruſt,

yf he ſtrike home at the left ſyde of yo^r^ hed, & ther 4. w^t^ all com in to take the cloze or grype of your hilt or ſword arme w^t^ his left hand, firſt ward his blow gardant, & be ſure to put in yo^r^ left hand und^r^ yo^r^ ſword & take hold on the out ſyde of his left hand, Arme or ſleve, putting yo^r^ hand vnder the wriſt of his Arme w^t^ the toppe of yo^r^ fing^rs^ vpwarde, & yo^r^ thumb & knuckles dounwarde, then pluck him ſtrongly towarde yo^r^ left ſyde, ſo ſhal yō indirect his feet turning hys left ſhould^r^ towarde yō, vpō w^ch^ inſtant yō Maye ſtrike or thruſt him w^t^ yo^r^ ſword & fly out ſaf, for his feet being indirected, although he hath his ſword at lyberty, yet ſhal he not be able to Make any offencyve fight againſt yō becauſe his tyme wilbe to longe to direct his feet againe to vſe his ſword in due tyme.

Alſo yf he attempt the cloze or grype w^t^ you vpon 5. his baſtard gardant ward, then croſſe his ſword w^t^ the lyke ward, & as he cometh in w^t^ his feet you haue the tyme of yo^r^ hand & bodye, wherby w^t^ yo^r^ left hand or Arme yō May put by his ſword blade, w^ch^ thinge you muſt ſodainly & ſtrongly do, caſting it towarde yo^r^ left

ſyde

ſyde, ſo may yō vncroſſe & thruſt him in y^e^ body w^t^ yo^r^ ſword & fly out inſtantlye, for yf yō ſtay ther he wil direct his ſword againe & endanger yō, this may ſafly be don, or yō May vncroſſe & turne yo^r^ poynt vp, & ſtrike him on the hed, & fly out inſtantly.

6. Yf he preſſe in to the half ſword vpō a forehand ward, then ſtrike a ſound blow at the left ſyde of his hed turnyng ſtrongely yo^r^ hand & hylt preſſing doun his ſword hand & arme ſtrongly, & ſtrike yo^r^ hilt full in his face, beringe yo^r^ hilt ſtrongly vpō him, for yo^r^ hand beinge vpp^r^moſt yō haue the aduantage in y^t^ grype, for ſo May yō breake his face w^t^ yo^r^ hylt, & ſtrike vp his heels w^t^ yo^r^ left foote, and throwe him a great fall, al this May ſafly be don by reaſon y^t^ he is weake in his cōmynge in by y^t^ moving of his feet, & yō repell him in y^e^ fulnes of yo^r^ ſtrength, as appeareth in the Chapter of y^e^ ſhort ſingle ſword fyght, in the 23^rd^ grownde of the ſame,

7. remember that yō neu^r^ attempt the Cloze nor grype but looke to his ſlyppe, Conſyder what is ſaid in the 8^th^ gen^r^all rule in the Second Chapter, & alſo in the 26^th^ ground of the ſyngle ſword fyght in the 4^th^ Chapter.

Of the ſhort ſword & dagger fyght Againſt the lyke Weapon.

Cap. 7.

1. OBSRVE at theſe weapons the form^r^ rules, defend w^t^ yo^r^ ſword & not w^t^ yo^r^ dagg^r^, yet yō may croſs his ſword w^t^ yo^r^ dagg^r^, yf yō may conveniently reach the ſame therw^t^, w^t^ out puttinge in of yo^r^ foote, only by bendinge in of yo^r^ body, other

other wyſe yo^{r} tyme wilbe to longe, & his tyme wilbe ſufficient to diſplace his owne, ſo y^{t} yō ſhal not hyt w^{t} yo^{r} dagg^{r}, & ſo he may make a thruſt vpon yō, this tyme y^{t} I here Meane, of puttinge by of his ſword is, When he lyeth out ſpent w^{t} his ſword poynt towarde you, & not elſe, w^{ch} thinge yf yō can do w^{t}out puttinge in of yo^{t} foote, then yō may vſe yo^{r} dagg^{r}, & ſtrike ſtrongly & ſodainlye his ſword poynt ther w^{t} vp, or doune, to indirect the ſame, that don, inſtantly ther w^{t} ſtrike or thruſt at him w^{t} yo^{r} ſword,

Alſo yō may put by his ſword blade w^{t} yo^{r} dagg^{r} When yo^{r} ſwords are Croſt, eyther aboue at forehand ward, or belowe at the baſtard gardant ward & ther w^{t} inſtantly ſtrike or thruſt w^{t} yo^{r} ſword & fly out accordinge to yo^{r} gou^{r}nors, of this yō may ſee more at large in y^{e} Chapter of the ſyngle ſword fyght in the 24th ground of the ſame. 2.

Alſo yf he be ſo foolehardye to com to the cloze, then yō may gard w^{t} yo^{r} ſword & ſtabb w^{t} yo^{r} dagg^{r}, & fly out ſaf, w^{ch} thinge yō may do becauſe his tyme is to longe by the numb^{r} of his feet, & yō haue but the ſwyft tyme of yo^{r} hand to uſe, & he cannot ſtabb til he haue ſetted in his feete, & ſo his tyme is to late to endang^{r} yō, or to defend himſelf. 3.

Know y^{t} yf yō defend yo^{r}ſelf w^{t} yo^{r} dagger in other ſort than is aforeſaid, yō ſhalbe endang^{r} to be hurt, becauſe the ſpace of yo^{r} dagg^{r} wilbe ſtill to wyde to defend both blow & thruſt for lacke of Circomference as y^{e} buckler hath. 4.

Alſo note when yō defend blow & thruſt w^{t} yo^{r} ſword yō haue a neerer courſe to offend yo^{r} enemye w^{t} yo^{r} ſword then when yō ward w^{t} yo^{r} dagg^{r}, for then yō may for the moſt prte from yo^{r} warde ſtrike or thruſt him. 5.

6. Yō muſt neyther Cloze nor com to the grype at theſe weapons, vnleſs it be by the ſlow motyon or diſordour of yo^{r} adv^{r}ſarie, yet yf he attempt y^{e} Cloze, or to com to the grype w^{t} yō, then yō may ſafly Cloze & hurt him w^{t} yo^{r} dagg^{r} or buckler & go free yo^{r} ſelf, but fly out according to yo^{r} gou^{r}nors & ther by yō ſhal put him from his attempted Cloze, but ſe yō ſtay not at any tyme w^{t}in diſtance, but in due tyme fly back or hazard to be hurt, becauſe y^{e} ſwyft motion of the hand being w^{t}in diſtance will deceue the eye, wher by yō ſhall not be able to Judge in due tyme to make a true ward, of this yō may ſe more in the chapter of the back ſword fyght in the 12th ground of the ſame.

7. yf he extend forth his dagg^{r} hand yō may make yo^{r} fyght at the ſame, remembring to kepe diſtance & to fly back according to yo^{r} gou^{r}nors.

Every fight & ward w^{t} theſe weapons, made out of any kynd of fyght, muſt be made & don according as is taught in the back ſword fyght, but only y^{t} the dagg^{r} muſt be vſed as is abouſaid, in ſteed of the grype.

8. yf he lye bent vpō his Stocata w^{t} his ſworde or rapior poynt behind his dagg^{r} ſo y^{t} yō cannot reach the ſame w^{t}out putting in of yo^{r} foote, then make al yo^{r} fight at his dagg^{r} hand, euer remembring yo^{r} gou^{r}nors, & then yf he draw in his dagg^{r} hand, ſo that yō may Croſe his ſworde blade w^{t} yo^{r}, then make narrow ſpace vpō him w^{t} yo^{r} poynt & ſodainly & ſtrongely ſtryke or bere his poynt towarde his right ſyde, indyrecting the ſame, & inſtantly ſtrike or thruſt him on the hed, face, Arme, or body, & fly back ther w^{t} out of diſtance ſtil remembring yo^{r} gou^{r}nors.

9. yf he lye ſpent vpō his variable fyght then kepe yo^{r}

diſtance & make yo^{r} ſpace narrow vpō him, til yō may Croſſe his ſword or rapior point w^{t} yo^{r} ſword poynt, wher vpon, yō having won or gayned the place, ſtrike or thruſt inſtantly.

yf he lye bent or ſpent vpō the Imbrocata bere vp yo^{r} point, & make yo^{r} ſpace narrow & do the lyke. 10.

Of the ſhort ſword & dagger fyght againſt the longe ſword & dagger or longe rapior & poinard.

Cap. 8.

YF yō haue the ſhort ſword & dagg^{r}, defend w^{t} yo^{r} ſword & not w^{t} yo^{r} dagg^{r}, except yō haue a gautlet or hylt vpō yo^{r} dagger hand, then yō may ward vpō forehand ward, vpon the dubble w^{t} the poynt of yo^{r} ſword towarde his face. 1.

Lye not aloft w^{t} yo^{r} ſhort ſword yf he lye alowe variable on the Stocata or passata &c, for then your ſpace wilbe to wyde to make a true Croſe in due tyme, or to farr in his courſe to make yo^{r} ſpace narrow, the w^{ch} ſpace take heede yō make very narrow, yea, ſo y^{t} yf it touch his blade, it is better. 2.

I ſay make yo^{r} ſpace narrow vntil yō can croſe his ſword blade ſtrongly & ſodainly, ſo ſhal you put by his point out of the right lyne, & inſtantly ſtrike or thruſt, & ſlyp back according to yo^{r} gou^{r}nors. 3.

but take heede unleſs yō can ſurely & ſafly croſe go not in, but although yō can ſo croſe, & ther vpon yō enter in, ſtay not by yt but fly out according to yo^{r} gou^{r}nors,

yf w^{t} his longe ſword or rapior he charge you aloft out of his open or true gardant fyght ſtrykyng at the right 4.

right ſyde of yo^{r} hed, yf yō haue a gautlet or cloſe hylt vpon yo^{r} dagg^{r} hand then ward it dubble w^{t} forehand ward, bering yo^{r} ſword hylt to warde yo^{r} right ſhould^{r}, w^{t} yo^{r} knuckles upwarde & yo^{r} ſword poynt to warde the right ſyde of his breſt or ſholder, croſſing yo^{r} dagger on yo^{r} ſword blade reſting yt ther on vpon y^{e} hyer ſyde of yo^{r} ſword beringe yo^{r} hylts cloſe together w^{t} yo^{r} dagger hilt a little behind yo^{r} ſword hilt bering both yo^{r} hands right out together ſpent or verye neere ſpent when yō ward his blowe, Meetinge him ſo vpon yo^{r} ward that his blow may light at yo^{r} half ſword or w^{t}in, ſo that his blade may ſlyde from yo^{r} ſword & reſt on yo^{r} dagg^{r}, at w^{ch} inſtant tyme thruſt forth yo^{r} poynt at his breſt & fly out inſtantly, ſo ſhal yō cōtynually endanger him & go ſaf yo^{r} ſelf.

5. Yf he ſtrike a loft at the left ſyde of yo^{r} hed, ward as aforeſaid, bering yo^{r} ſword hilt towarde yo^{r} left ſhould^{r} w^{t} yo^{r} knuckles doun warde, & yo^{r} ſword poynt towarde the left ſyde of his breſt or ſhold^{r}, bowing yo^{r} body & hed a little forewarde towarde him, & rememb^{r} to bere yo^{r} warde on both ſyds y^{t} he ſtrike y$^{\bar{}}$ not vpon the hed, then vpō his blow meet his ſword as is aforeſaid w^{t} yo^{r} dagger croſt ou^{r} yo^{r} ſword blade as before, & when his ſword by reaſon of his blowe vpon yo^{r} ſword ſhal ſlyde doune & reſt vpon yo^{r} dagger, then ſodainly caſt his ſword blade out to warde yo^{r} left ſyde w^{t} yo^{r} dagger, to indirect his point, & ther w^{t} thruſt at his breſt frō yo^{r} ward & fly out inſtantly, the like may you do yf his ſword glance out frō yo^{rs}, vpō his blowe.

al this may ſafly be don w^{t} y^{e} ſhort ſword & cloſe hylted dagger or gautlet

Stay not w^t in diſtance of the longe ſword or rapior w^t yo^r ſhort ſword, nor ſuffer him to wyn the place of you, but eyther Croſe his ſword, or make yo^r ſpace verye narrow to croſe it before his blow or thruſt be in force, yet keping yo^r diſtance wher by he ſhall ſtrike or thruſt at nothing, & ſo he ſhalbe ſubiect to the tyme of yo^r hand againſt the tyme of his feet. 6.

Kepe diſtance & lye as yō thinke beſt for yo^r eaſe & ſafty, yet ſo y^t yō may ſtrike, thruſt, or ward, & when yō find his poynt Certaine, then make yo^r ſpace narrow & croſe his ſword, ſo ſhal yō be the firſt mou^r, & enter firſt into yo^r action, & he beinge an aft^r doer, is not able to avoyd yo^r Croſe, nor narrow ſpace, nor any ſuch offence as ſhalbe put in execution againſt hym. 7.

havinge Croſt his longe ſword or rapior w^t yo^r ſhort ſword blade, & put his poynt out of the ſtrait lyne by force then ſtrike or thruſt at him w^t yo^r ſword & fly out inſtantly accordinge to y^r gou^rnors. 8.

Stand not vpō gardant fyght only, for ſo he will greatlye endanger yō out of his other fyghts becauſe yō haue made yo^r ſelf a c^rtaine marke to him, for in contynuynge in y^t fyght only yō ſhal not only weary yo^r ſelf, but do alſo exclude yo^rſelf frō the benyfyt of the Open, variable, & cloſe fyghts, & ſo ſhal he haue four fyghts to yo^r one, as yō may ſe in the Chapter of the ſhort ſyngle ſword fyght in the 15^th ground therof. 9.

Yf he lye in Open or true gardant fyght, then yō may vpon yo^r open & gardant fight ſafly bringe yo^r ſelf to the half ſword, & then you may thruſt him in the body, vnder his gard or ſword when he bereth it gardant, becauſe he is weak in his garde, but fly out inſtantly, & he cannot bringe in his point to hurt yō 10.

except

except he go back w^t his foote or feet, w^ch tyme is to longe to anſwer the ſwyft tyme of the hand.

yf he put doune his ſword lower to defend y^t thruſt then will his hed be open, ſo y^t yō may ſtrike him on the hed ou^r ouer his ſword & fly out ther w^t, w^ch thinge he cannot defend, becauſe his ſpace is to wyde to put vp his blade in due tyme to make a true ward for the ſame.

11. Underſtand y^t the whole ſom of the long rapior fyght is eyther upon the Stocata, Paſſata, Imbrocata, or Mountanta, al theſe, and al the reſt of their devycs you may ſafly prevent by kepinge yo^r diſtance, becauſe therby you ſhal ſtil dreue him to vſe the tyme of his feet, wherby yō ſhal ſtil p^rvent him of y^e true place, & therfore he cannot in due tyme make any of theſe fyghts offencive vpon you by reaſon y^t the number of his feet will ſtill be to great, ſo y^t he ſhal ſtil vſe the ſlow tyme of his feet to the ſwyft tyme of yo^r hand, & therfore yō may ſafly defend yo^r ſelf & offend him,

Now you plainly ſe how to p^rvent al theſe, but for the bett^r example note this, wher as I ſay by kepeinge of diſtance ſom may obiect y^t then the rapior man will com in by degrees w^t ſuch warde as ſhall beſt lyke him, & dryve back the ſword man contynually, to whome I anſwer, y^t can he not do, by reaſon y^t y^e ſword mans travers is made c^rculer wyſe, ſo y^t the rapior man in his cōmyng hath no place to carrye the poynt of his rapior, in due tyme to make home his fyght, but y^t ſtil his rapior wil lye w^t in the compaſs of the tyme of the ſword mans hand, to make a true croſſe vpon him, the w^ch croſe beinge made w^t force he may ſafly vncroſe, & hurt the rapior man in the Arme, hed,

face or body, w^t blow or thruſt, & fly out ſaf before he ſhal haue tyme to direct his poynt againe to make his thruſt vpō y^e ſword man.

Yf y^e rapior man lye vpon the ſtocata, firſt make yo^r ſpace narrow w^t yo^r ſhort ſword, & take heed y^t he ſtrike not doune yo^r ſworde poynt w^t his dagger & ſo Jump in & hurt you w^t the thruſt of his longe rapior, w^ch thing he may do becauſe he haue cōmaunded your ſword, & ſo yō are left open & diſcov^red & left onlye vnto the vnc^rtaine ward of yo^r dagg^r, w^ch ward is to ſyngle for a man to venter his lyf on, w^ch yf yō myſſe to prforme Neuer ſo lyttle yō are hurt or ſlaine. 12.

To p^rvent this danger yō muſt remember your gou^rnors, & p^rſently vpon his leaſt motion be ſure of yo^r diſtance, & yo^r narrow ſpace, then do as follow^t. 13.

Yf he lye vpō his ſtocata, w^t his rapior point w^t in or behind his dagg^r hand out ſtrait, then lye yō variable in Meaſure w^t yo^r right foote before & yo^r ſword poynt out directly forth w^t yo^r ſpace very narrow as neere his rapior poynt as yō may, betwixt his rapior poynt & his dagger hand, from w^ch yō may ſodainly w^t a wriſt blow, lyft vp yo^r poynt & ſtrike him on the out ſyde or in ſyde of his dagg^r hand, & fly out w^t all, then make yo^r ſpace narrow as before, then yf he thruſt home at yō, yō are redy p^rpred for hys thruſt, or yō may thruſt at his dagger hand, do w^ch yō ſhal thinke beſt, but yo^r blow muſt be but only by moving of yo^r wriſt, for yf yō lyft vp yo^r hand and Arme to fetch a large blowe then yo^r tyme wilbe to longe, & yo^r ſpace to wyde in due tyme to make a true ward to defend yo^r ſelf from his thruſt, ſo ſhall yō hurt him although he haue a gantlet therone, for yo^r thruſt wil run vp between 14.

between his fingrs, & yor blow wil cut of the fyngrs of his gantlet, for he cannot defend himſelf from on blow or thruſt of 20, by reaſon that yō haue the place to reach home at his hand, & for yt cauſe he cannot prvent it,nether can he rech home to you wtout putting in of his foot or feet, becauſe his diſtance is to large, but upon eur blow or thruſt yt yō make at his hand ſlypp back a little, ſo ſhal yō ſtill vpō eur blow or thruſt yt yō make at him, be out of his reach,

but yf vpon yor blow or thruſt he wil enter in wt his foote or feet to make home his ſtocata or thruſt vpō you, then by reaſon of yor ſlydynge back, you ſhalbe prepared in due tyme to make a prfyt ward to defend yorſelf wt yor ſworde.

Therfore euer reſpect his rapior poynte & remember to make & kepe narrow ſpace vpon it wt yor ſword poynt, that yō may be ſure to break his thruſt before it be in ful force.

15. Yf he thruſt at yor hyer prts wt his poynt a lyttle mounted, then make narrow yor ſpace wt yor poynt vpon his, yf yō Croſe his blade on the inſyde between his rapior & his daggr, yf he preſs in then frō yor croſe beat or bere backe his poynt ſtrongly towarde his right ſyde, and havinge indirected his poynt, ſtrike him on the inſyde of the rapior or daggr hand or Arme, or on the hed, face, or body, & fly out inſtantly,

Or you may vpon his prſſinge in wt his thruſt Slypp yor poynt doune as he cōmeth in, & put vp yor hylt & ward it gardant, & ther wt from that ward caſt out his poynt, & ſodainly ſtrike him in one of the placs aforeſaid, & fly out inſtantlye remembringe yor gournors.

16. Yf he lye faſt & do not com in, then ſtrike & thruſt

at

at his dagg^{r} hand, w^{t} yo^{r} wriſt blow and ſlypp back ther w^{t} euery tyme

but yf he lye faſt & beat doune yo^{r} poynt w^{t} his dagger, & then thruſt at you from his Stocata then turne vp yo^{r} hilt w^{t} yo^{r} knuckles vpwarde & yo^{r} nayles dounwarde, takinge his blade vpō the backſyde of yo^{rs} towarde yo^{r} left ſyde & bere it gardant towarde y^{t} ſyde, & ſo may yō offend him as before is ſaid vpō y^{t} ward. 17.

The lyke may yō do vpon him yf he lye out w^{t} his poynt, when yō haue croſt y^{e} ſame w^{t} yo^{rs}, & ſtrike it to eyther ſyde, & ſo indirect his poynt, and then ſtrike or thruſt & fly out. 18.

The lyke muſt yō do, yf he lye with his point directly towarde yo^{r} bellye 19.

but yf yō croſe his poynt ſo mounted or dyrect as abouesaid, vpō y^{e} out ſyde of yo^{r} ſword w^{t} his poynt a little hyer than yo^{r} hylt, ſo y^{t} you may croſe his blade, then yf he thruſt ouer yo^{r} blade ſyngle uncroſſing the ſame, then may you break it w^{t} yo^{r} forehand ward out towarde yo^{r} right ſyde, & yf he com in ther w^{t}, then ſtrike him on the out ſyde of his rapior hand or Arme, or on the hed or face, & fly out ther w^{t} 20.

but yf he thruſt in ouer yo^{r} ſword as abouesaid & preſs in his blade ſtrongly dubble w^{t} the helpe of his dagger, then put doune yo^{r} poynt & turne vp yo^{r} hylt gardant, ſo ſhal yō ſafly defend it beringe it gardant out towarde yo^{r} left ſyde & from yt ſtrike him in betweene his rapior and dagger in on of the foreſaid places, & fly out, 21.

but yf from this croſe he ſlypp his poynt doune to thruſt vnd^{r} yo^{r} ſword, then ſtrike doune his poynt towarde

warde his left foote & ther wᵗ ſtrike him on the out ſyde of his rapior hand or arme, hed, face, or body, & fly out inſtantly, according to yoʳ gouʳnors.

Alſo yō may vpon this of his poynt doune, then turne yoʳ poynt ſhort ouer his blade in yoʳ ſteppynge back, & put yoʳ poynt doune in the inſyde of his blade turnynge vp yoʳ hilt gardant as aforeſaid, & then yf he thruſt at yō, bere it gardant towarde yoʳ left ſyde, & then haue you the ſame offenciue blowes & thruſts againſt him as is abouefaid vpō yᵉ ſame ward.

22. Yf he lye aftʳ the Stocata wᵗ his poynt doune towarde yoʳ foote, then croſe his blade on yᵉ out ſyde, & yf he turne his poynt ouʳ yoʳ blade to make his thruſt vpon you, then turne vp yoʳ hilt & bere it gardant as abouefaid, bering it out towarde yoʳ left ſyde, & frō yᵗ ward offend him as is abouefaid

23. Alſo in this fyght take heed yᵗ he thruſt yō not in the ſword hand or arme, therfore euer reſpect to draw it back in due tyme, remembring therin yoʳ twofold gouʳnor, in yoʳ comyng in, to make yoʳ croſe or narrow ſpace.

24. Yf at ſword & dagger or buckler he ſtrike in at the out ſyde of yoʳ right legge ward it wᵗ the back of yoʳ ſword, carrying yoʳ poynt doune holding yoʳ knuckles dounwarde & yoʳ Nayles upwarde, bering yoʳ ſword out ſtrongly towarde yoʳ right ſyde, vpon wᶜʰ ward yō may ſtrike him on the out ſyde of the left legge, or thruſt him in yᵉ thigh or belly

25. The lyke may yō do yf he ſtrik at yoʳ other ſyde, yf yō ward his blowe wᵗ the edge of yoʳ ſword yoʳ hand & knuckles as aforeſaid, caſting out his ſword blade

towarde yo^{r} left ſyde, this may be vſed at ſhort or longe ſword fyght.

you muſt neuer vſe any fyght againſt the longe rapior & dagg^{r} w^{t} yo^{r} ſhort ſword but variable fyght, becauſe yo^{r} ſpace wilbe to wyde, & yo^{r} time to longe, to defend or offend in due tyme. 26.

Alſo yō muſt vſe large diſtance euer, becauſe out of y^{t} fyght yō can hardly make a true croſe becauſe being w^{t} in diſtance y^{e} eye is deceived to do it in due tyme 27.

remembr in putting forth yo^{r} ſword point to make yo^{r} ſpace narrow, when he lyeth vpō his ſtocata, or any thruſt, yō muſt hold y^{e} handle thereof as it were a longſt yo^{r} hand, reſting the pom̃ell thereof in the hollow prte of the mydl of the heele of yo^{r} hand towarde the wriſt, & the former prte of the handle muſt be holden betwixt the fore fynger & thumbe, w^{t}out the Myddle Joynt of the fore fynger towarde the topp ther of, holding y^{t} fynger ſomethinge ſtrait out gryping round yo^{r} handle w^{t} yo^{r} other iij fingers, & laying yo^{r} thumbe ſtrait out vpō the handle, ſo y^{t} yo^{r} thumbe lye al alonge vpon y^{e} ſame, ſo ſhal yō lay yo^{r} point out ſtrait towarde his, the better to be able to prforme this actiō prfytly, for yf yō grype yo^{r} handle cloſe ou^{r}thwart in yo^{r} hand, then can yō not lay yo^{r} poynt ſtrait vpon his to make yo^{r} ſpace narrow, but y^{t} yo^{r} poynt wil ſtil lye to wyde to doe the ſame in due tyme, & this is the beſt way to hold yo^{r} ſword in al kinde of variable fyght 28.

but vpō yo^{r} gardant or open fyght then hold it w^{t} ful gryping it in yo^{r} hand, & not laying yo^{r} thumb alonge y^{e} handle, as ſom vſe, then ſhal you neuer be able ſtrongly to ward a ſtronge blowe. 29.

This

30. This haue I written out of myne entyre loue y^t I bere to my country men, wiſshing them yet once againe to follow the truth, & to fly the vaine Imprfyt rapior fight, the bett^r to ſaue themſelues from wounds & ſlawghter, for who ſo attayneth to the p^rfectiō of this true fyght w^ch I haue here ſet forth in theſe my bref Inſtructions, & alſo in my pradoxes of defence, ſhal not only defend them ſelues, but ſhal ther by bring thoſe that fyght vpō that Imprfyt fyght of y^e rapior vnd^r their mercye, or elſe put them in Cobbs travers, where of yō may read in the 38 Chapter of my pradoxes aforeſaid.

Of y^e ſword & Buckler fyght,

Cap. 9.

SWORD & Buckler fight, & ſword & dagg^r fyght are al one, ſaving y^t yō may ſafly defend both blowe & thruſt, ſyngle w^t yo^r buckler only, & in likeſort yō may ſafly ward both blowes & thruſts dubble, y^t is w^t ſword & buckler together w^ch is great aduantage againſt y^e ſword & dagg^r, &c, & is the ſureſt fight of al ſhort weapons.

Of the two hand ſword fight againſt y^e like weapon.

Cap. 10.

THESE weapons are to be vſed in fight as the ſhort ſtaf, yf both play vpō dubble & ſyngle hand, at the ij hand ſword, the long ſword hath the advantage yf the waight ther of be not to heavye for his ſtrength y^t hath it, but yf

both play only vpon dubble hand, then his blade wch is of cõvenyent length agreeing wt his ſtature yt hath it, wch is according with the length of the meaſure of his ſyngle ſwordblade, hath the advantage of ye ſword yt is to long for ye ſtature of the contrarye prtye, becauſe he can croſe & vncroſe, ſtrike & thruſt, cloze & grype in ſhorter tyme than the other can.

Of the ſhort ſtaf fyght, being of cõvenient length, againſt yt like weapon.

Cap. 11.

THE ſhort ſtaf hath iiij wards, yt is ij wt ye point vp, & ij wt the poynt doune,

At theſe weapons euer lye ſo that yõ may be able to thruſt ſyngle & dubble, & to ward, ſtrike, or thruſt in due tyme, ſo ſhal yor enemye, yf he fyght only vpõ dubble hand be driuen of neceſſitie, ſeeking to wyn the place, to gayne yõ the place wher by yõ may ſafly hurt him, & go free yor ſelf by reaſon of yor diſtance, & when yõ ſhal ſeeke to wyn the place vpon him he ſhal not be able to gaine the place vpon you, nor to kepe the place frõ you wher by he ſhal eyther be hurt, or in great danger of hurt, by reaſon of yor large reach, true place & diſtance, yor fight being truly handled keeping it ſelf from Cloze & grype. 1.

And in like ſort ſhal it be betweene two, wch ſhal play vpon the beſt, yt is, yf they play both dubble & ſyngle handed. 2.

yf yõ fynd yor ſelf to ſtrong for yor adurſarie in any mannr of ward, whether the ſame be aboue or belowe, put by his ſtaf wt force, & then ſtrike or thruſt from it, 3.

but

Facſimile page of the MS. of "Bref Inſtructions."

(Actual ſize.)

wnderneth and in al ye fyght wt his weapon
to make yor sure warde, whether it be against
4. hys staff or bylle, so yt assay so ever ye shall do
against yow, ye shal still make yor sword byfore
yis be in yis full sure to offend yow/

Also yf ye saw wayte vpon hys end of yis bylle
5. wt hys end of yor bylle, hyde sodainly wt hys end of
yor bylle smyte yis bylle end, strongly towarde
yow, & therwithall withdrawe yis bylle end, & forth-
wyth wind vp yor bylle end to yis sande, so saue ye
hys lyke advantage as aforesaid, notwithstandyng
yf smyting vp towarde yis sande/

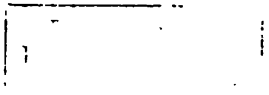

Yf ye lye alowe wt yis bylle end, hyde yf ye saw
6. put yor bylle end, in wt hys end of yis bylle, & strayt
hys put downe yis bylle staff, wt yor bylle end, beat-
ynge it flat, hyde ye may sodenly wind vp yor
bylle end straight sanded, to yis sande & fly out
hereto, so shal ye cast him in ye sand & yo saue
yor selfe/

Yet like may ye do wt yor bylle against
7 hys short staff, yf ye saw put it downe in ye
lyke sort, but yf he cast a longe staff, hyde wind
vp double sande, wt both sande vpon yor bylle, wt
hym ye may safely do, because ye are in yor
strength, & sand taken him in hys awake yf he
cast staff/

Yf he lye lyge wt yis bylle end, hyde put vp
8 yor bylle end sande yis, & cast yis bylle out to ye
syde & ye shal hind hym fast, so saue ye hys ad-
uantage to hym or seeke at him, & fly out/

Or yf ye cast yis bylle from out of hys syght

lyne

4. but yf yõ fynd him to ſtrong for yõ vpõ hys blowes from a loft, ſo yᵗ yõ can hardly bere them vpon yoʳ ward, then when he ſtryketh in a loft at yoʳ hed, & by hys maine ſtrength would beat doune yoʳ ſtaf, & ſo geue yõ a hurt before yõ ſhalbe able to com againe into yoʳ ward,

Againſt ſuch a on giue the ſlypp in this ſort, ſodainly dray back the hyer prte of yoʳ body a lyttle & yoʳ for moſt foote wᵗ all, & ſlyp in the poynt of yoʳ ſtaf vndʳ his ſtaf, & thruſt ſingle at him, & fly out wᵗ all, ſo ſhal you be ſure to hyt him & go out free,

5. yf he lye a loft wᵗ his ſtaf, then lye yõ wᵗ your hindʳ hand alowe, wᵗ yoʳ poynt vptowards his ſtaf making yoʳ ſpace narrow becauſe yõ may croſe hys ſtaf to ward his blow before it com in ful force, & then ſtrongly & ſodainlye indirect his poynt, & ſo thruſt at him ſyngle, the wᶜʰ yõ may do before he can remoue his feet, by reaſon of the ſwyftnes of yoʳ hand & fly out ther wᵗ, do this for both ſyds of yᵉ hed yf cauſe require yt, ſo ſhal yõ ſaue both yoʳ hed, body, and al prts, for yoʳ vppʳ prts are garded, & yoʳ lower prts to farr out of his reach.

6. yf he lye a lowe wᵗ his poynt doune, then lye yõ wᵗ yoʳ poynt doune alſo, wᵗ yoʳ formoſt hand lowe & yoʳ hindʳ moſt hand hye, ſo yᵗ yõ may croſe his ſtaf, & do in al things as is before ſaid in the other

7. yf he lye vpõ the thruſt then lye yõ wᵗ yoʳ ſpace narrow lying vp or doune wᵗ yoʳ poynt in ſuch ſort as you may croſe his ſtaf, & therby yõ ſhal be able to put or beat by his thruſt before it be in ful force, & then ſtrike or thruſt, euer remembring yoʳ gouernors.

yf vpon this any wil obiect yᵗ yf this betrue, then it

is in vaine to ſtrike, or thruſt, becauſe he y^t doth it is ſtil in danger, this doubt is anſwered in the ſhort ſingle ſword fight, in the 12^th ground thereof

Yf yo^r adu^rſarie ſtrike a loft at any ſyde of yo^r hed 8.
or body, ward it w^t yo^r point vp & making yo^r ſpace ſo narrow y^t yō may croſe his ſtaf before it com in ful force bearing or beating doune his blow ſtrongly, back againe towards y^t ſyde y^t he ſtryketh in at you, & out of y^t ward, then Inſtantly, eyther ſtrike frō y^t ward, turning back yo^r ſtaf, & ſtrike him on y^t ſyde of the hed y^t is next yo^r ſtaf,

Or lyft vp yo^r ſtaf againe, & ſo ſtrike him on the hed or body, or thruſt at his body dubble or ſyngle, as yō may find yo^r beſt aduantage ever in holding yo^r ſtaf, let ther be ſuch convenient ſpace between yo^r hands, wher in you ſhal fynd yo^r ſelf apteſt to ward, ſtrike or thruſt to yo^r beſt lyking

Yf yō play w^t yo^r ſtaf w^t yo^r left hand before & yo^r 9.
right hand back behind, as many men do fynd them ſelues moſt apteſt when y^t hand is before, & yf yo^r aduerſarie vpō his blowe com in to take the cloze of you, when yō fynd his ſtaf croſt w^t yo^rs neere his hand then ſodainlye ſlyp vp yo^r right hand cloſe to the hind^r ſyde of yo^r formoſt hand, & p^rſently looſing yo^r for muſt hand & put it vnd^r your owne ſtaf, & then croſe or put by his ſtaf ther w^t & w^t yo^r hand take hold of his ſtaf in ſuch ſort y^t yo^r lyttle fyng^r be towards the poynt of his ſtaf, & yo^r thumb & fore fing^r towards his hands, & p^rſently w^t yo^r right hand mount y^e point of yo^r owne ſtaf caſting the point thereof back ouer yo^r right ſhold^r, w^t yo^r knuckles doun wards, & yo^r nayles vpwards, & ſo ſtabb him in the

the body or face wᵗ the hindʳ end of yʳ ſtaf, but be ſure to ſtabb him at his cõmyng in, whether yõ catch his ſtaf or not, for ſomtymes his ſtaf will lye ſo farr out yᵗ vpon his cõmyng in yõ cannot reach it, then catch yᵗ arme in his comynge in wᶜʰ he ſhal firſt put forth wᵗ in yoʳ reach, but be ſure to ſtabb, for his ſtaf can do yõ no hurt, and having ſo don, yf yõ fynd yoʳ ſelf to ſtrong for him, ſtrike vp his heeles, yf to weake fly out.

10. The like muſt yõ do yf yõ play wᵗ yoʳ right hand before, & yoʳ left hand back behind, but yᵗ yõ neede not to ſlyde forth yoʳ left hand, becauſe yoʳ right hand is in the right place of yoʳ ſtaf alredye to vſe in yᵗ action, but then yõ muſt diſplace yoʳ left hand to take hold of his ſtaf, or the grype as is a foreſaid, & to vſe the ſtabb as is aboue ſaid,

11. yf both lye a loft as aforeſaid, & play wᵗ yᵉ left hand before, yf he ſtrike at the Ryght ſyde of yoʳ hed or body then muſt yõ croſe his ſtaf before his blow be in ful force, by making yoʳ ſpace narrow, & then ſtrike it ſtrongly back againe towards his left ſyde, & from yᵗ ward yõ may turne back yoʳ ſtaf & ſtrike him backwards ther wᵗ on the left ſyde of the hed, or lyft vp yoʳ ſtaf & ſtrike him on the right or left ſyde of the hed, body, or arme, or thruſt him in the body, the lyke blowes or thruſts may you make at him whether he ſtrike or thruſt, having put by his ſtaf, remembring yoʳ gouʳnors.

The like ordʳ muſt yõ vſe in playing with the right hand before,

12. but yf he thruſt at yõ cõtynually then euer have a ſpeciall care to cõſyder, whether he lye a loft or belowe,

lowe, & do continually thruſt at yō ther from, then looke that yō euer lye ſo yᵗ yō make yoʳ ſpace ſo narrow vpon him, yᵗ yō be ſure to croſe his ſtaf wᵗ yoᵘʳ, & put it before it be in full force, and frō yᵗ ward, thruſt at him ſyngle or dubble as yō fynd it beſt, & yf he remembʳ not to fly back at yᵗ inſtant when he thruſteth it wilbe to late for him to avoyd any thruſt yᵗ yō ſhal make at him,

Of the ſhort ſtaf fyght againſt the longe ſtaf.
Cap. 12.

YF yō haue a ſtaf of the cōvenient length againſt a ſtaf of longer length than is cōvenient then make yoʳ ſpace narrow, & ſeeke not to offend vntil yō haue ſtrongly & ſwyftly put by his point the wᶜʰ yō ſhal wᵗ eaſe accompliſh, by reaſon of yoʳ narrow ſpace & yoʳ force, then ſtrike or thruſt as yō ſhal thinke beſt. 1.

This ſhort ſtaf fight againſt yᵉ longe ſtaf is don in the ſame ſort that ſhort ſtaf fight to ſhort ſtaf is don, but yᵗ the man wᵗ the ſhort ſtaf muſt alwaies remembʳ to kepe a narrow ſpace vpon yᵉ long ſtaf, wher ſo euer the longe ſtaf ſhal lye, Hye or lowe, cōtinually make yoʳ ſpace narrow vpō him, ſo ſhal yō be ſure yf he ſtrike or thruſt at yō, to take the ſame before it be into his full force & by reaſon yᵗ yoʳ force is more wᵗ yoʳ ſhort ſtaf than his can be at the poynt of his longe ſtaf, yō ſhal caſt his ſtaf ſo farr out of yᵉ ſtreit lyne wᵗ yoʳ ſhort ſtaf, yᵗ yō may ſafly enter in wᵗ yoʳ feet, & ſtrike or thruſt home at him. 2.

Yet this pʳſent ſhift he hath at yᵗ inſtant, he may 3.

ſlypp

ſlypp back his ſtaf in his hands, wᶜʰ tyme is ſwyfter then yoʳ feet in cõmynge forwarde, wher by he wil haue his ſtaf as ſhort as yoᵘʳ, yet by reaſon yᵗ at yᵉ firſt yõ caſt his ſtaf ſo farr out of the right lyne, that yõ had tyme to enter in wᵗ yoʳ feet, yõ ſhal then be ſo neere him, yᵗ yõ may make narrow ſpace vpõ him againe, ſo yᵗ he ſhal haue no tyme to ſlyp forwarde his ſtaf agayne in his former place, nor to go back wᵗ his feet, & ſo to recouʳ the hindʳ end of his ſtaf againe, becauſe yf he ſlyp forth his ſtaf to ſtrike or thruſt at you, that may yõ ſafly defend becauſe of your narrow ſpace vpõ him, & ther wᵗ al yõ may ſtrike or thruſt him frõ yoʳ warde, eyther at ſyngle or dubble,

4. but yf he wil go back wᵗ his feet thinking by yᵗ meanes to recouʳ the whole length of hys ſtaf againe, yᵗ can he not do in cõvenyent tyme because the tyme of yoʳ hand is ſwyftʳ than yᵉ tyme of his feet, by reaſon wherof yõ may ſtrike or thruſt him in his goyng back.

5. Againe it is to be remembred in yᵗ tyme yᵗ yõ keepe him at yᵗ bay, vpõ the drawing in of his ſtaf, the hindʳ end therof lying ſo farr back behind him wilbe ſo trobbleſom vnto him, that he can make no prfyt fight againſt yõ & cõmonly in his drawing in of his ſtaf it wilbe to ſhort to make true fight against you, nether to offend yõ nor defend him ſelf.

6. yf he attempt the Cloze wᵗ yõ then ſtabb him wᵗ the hindʳ end of yoʳ ſtaf as is ſaid in yᵉ fyght of yᵉ ij ſhort ſtaves of cõvenyent length, in the 9ᵗʰ ground therof

Note. Rememb^{r} yᵗ at Morris pyke, forreſt byll, longe ſtaf & two hand ſword, yᵗ yõ lye in ſuch ſort vpõ yoʳ wards vᵗ yõ may both ward, ſtrike, & thruſt,

both dubble & ſyngle, & then returne to yo^{r} former wards ſlyps & lyinge againe & then are yō as yō wer before

The like fight is to be vſed w^{t} y^{e} Javelen, prtyſon, halbard, black byll, battle Axe, gleve, half pyke &c.

Off the fight of the forreſt byll againſt the like weapon & againſt the ſtaf.

Cap: 13.

THE forreſt byl haue the fyght of the ſtaf but y^{t} it hath iiij wards more w^{t} the hed of the byll, y^{t} is one to bere it vpwards, another to beat it dounwards ſo y^{t} the carrage of yo^{r} byll hed be w^{t} the edge neyther vp nor doune but ſyde wyſe. 1.

The other ij wards are on to cast his byl hed towards the ryght ſyde, thother towards y^{e} left ſyde.

And vpon ei^{r} on of theſe wards or catches run vp to his hands w^{t} the hed of yo^{r} byll & then by reaſon y^{t} yō haue put his ſtaf out of y^{e} right lyne, yō may catch at his hed neck arme or leggs &c w^{t} y^{e} edge of yo^{r} byll, & hook or pluck him ſtrongly to you & fly out w^{t}all.

Yf yō caſt his ſtaf ſo farr out y^{t} yo^{r} byll ſlyde not vp to his hands, then yō may ſafly run in ſlyding yo^{r} hands w^{t}in one yard of y^{e} hed of yo^{r} byll, & ſo w^{t} yo^{r} byl in one hand take him by y^{e} legg w^{t} the blade of yo^{r} byll & pluck him to yō & w^{t} yo^{r} other hand defend yo^{r} ſelf from his gryps yf he offer to grype w^{t} you. 2.

Yf you fight byll to byll do the like in al reſpects as w^{t} y^{e} ſtaf in yo^{r} fyght, for yo^{r} byll fight & ſtaf fyght 3.

is

is al one, but only for the defence & offence w^t the hed of y^e byll, & wher y^e ſtaf man vpō the cloze yf he vſe y^e ſtabb w^t the butt end of his ſtaf, the byll man at y^t tyme is to vſe y^e catch at his legg w^t y^e edge of his byll, as in y^e ſecond ground above is ſaid.

4. Remembr euer in al yo^r fyght w^t this weapon to make yo^r ſpace narrow whether it be againſt the ſtaf or byll ſo y^t what ſo euer he ſhal do againſt you, yō ſhal ſtill make yo^r ward before he be in his ful force to offend you.

5. Alſo yf yō can reach w^tin the hed of his byll w^t the hed of yo^r byll then ſodainly w^t the hed of yo^r byll ſnach his byll hed ſtrongly towards you, & therw^tall indirect his byl hed & forcibly run vp yo^r byl hed to his hands, ſo haue yō the lyke advantage as aboueſaid, wheras I ſpake of runyng vp towards his hands.

6. Yf he lye alowe w^t his byl hed then yf yō can put yo^r byll hed in ou^r the hed of his bylle & ſtronglye put doune his byl ſtaf w^t yo^r byl hed, bearinge it flat, then yō may p^rſently run vp yo^r byll hed ſingle handed to his hands & fly out therw^t, ſo ſhal yō hurt him in y^e hand & go free yo^rſelf.

7. The like may yō do w^t yo^r byll againſt the ſhort ſtaf yf yō can preſs it doune in y^e lyke ſort, but yf he haue a longe ſtaf then run vp dubble handed w^t both hands vpon yo^r byll, w^ch thynge yō may ſafly do becauſe yō are in yo^r ſtrength & haue taken him in the weak prte of his ſtaf.

8. Yf he lye hye w^t his byll hed then put vp yo^r byll hed und^r his & caſt his byll out to y^t ſyde y^t yō ſhal fynd fytteſt, ſo haue yō the aduantage to thruſt or hook at him & fly out.

Or yf yō caſt his byl farr out of the right lyne then run in & take him by the legg w^t y^e edge of yo^r byll, as is ſaid in the 2^nd ground of this chapter.

Yf yō ward his blow w^t yo^r byll ſtaf w^tin yo^r byll hed, then anſwer him as w^t y^e ſhort ſtaf. 9.

Note y^t as the byl mans aduantage is to tak the ſtaf w^t y^e hed of y^e byll ſo the ſtaf man by reason y^t y^e hed of y^e byll is a faire mark hath y^e aduantage of him in y^e caſting aſyde of the hed of the byll w^t his ſtaf or beating y^t aſyde, the w^ch yf y^e byll man looke not very well into it the ſtaf man ther vpon wil take al mann^r of aduantages of y^e ſtaf fyght againſt him.

" The Chapter on the Morris pike is unique, as no other work ſpeaks of parries with that weapon."— W. London.

Of the fyght of y^e morris pyke againſt the lyke weapon.

Cap: 14.

YF yō fight w^t yo^r enemy having both morris pyks w^t both poynts of yo^r pyks forwards, alowe upon y^e ground, holding the butt end of the pyke in one hand ſyngle w^t knuckles vpwards & the thumb undrneth, w^t the thumbe & forefing^r towards yo^r face & the lyttle fynger towards the poynt of y^e pyke, bering the butt end of the pyke frō the one ſyde to y^e other right before the face, then lye yō w^t yo^r arme ſpent & yo^r body open w^t yo^r hand to y^e right ſyde w^t yo^r knuckles Dounwards & yo^r nailes vpwards. 1.

Or yō may lye in y^t ſort, w^t yo^r hand over to the left ſyde w^t yo^r knuckles vpwards & yo^r nayles Dounwards, wherby al yo^r body wilbe Open. yf then he ſhal ſodainlye rayſe vp the point of his pyke w^t his other hand

hand & com to thruſt at yō, then in the Mountinge of his poynt or his cōynge in ſodainlye toſſe vp the poynt of yo^{r} pyke w^{t} yo^{r} hand ſyngle & ſo thruſt him in the leggs w^{t} yo^{r} pyke & fly out therw^{t}.

Or els you May ſtand vpō yo^{r} ward & Not toſſe vp yo^{r} pykes poynt but breake his thruſt by croſſynge the poynt of his pyke w^{t} the Mydds of yo^{r} pyke by caſting vp yo^{r} hand, w^{t} the butt end of yo^{r} pyke aboue yo^{r} hed, & ſo bering ouer hys point w^{t} yo^{r} ſtaf, to the other ſyde as for example,

2. Yf yō lye w^{t} yo^{r} hand ſpent towards the left ſyde of yo^{r} bodye, then ſodainlye bere his poynt ouer ſtrongly towards yo^{r} right ſyde.

Yf yō lye w^{t} yo^{r} hand ſpent towards yo^{r} right ſyde then bere his poynt towards yo^{r} left ſyde, & ther vpon gather vp yo^{r} pyke w^{t} yo^{r} other hand & thruſt at him & fly out.

Yf he cōtynew his fyght w^{t} his point aboue, & yō lye w^{t} yo^{r} pyke breſt hye & hyer w^{t} your hand & point ſo, y^{t} yō may Make yo^{r} thruſt at his face or body w^{t} yo^{r} poynt Directly towards his face, holding yo^{r} pyke w^{t} both your hands on yo^{r} ſtaf yo^{r} hinder hand w^{t} yo^{r} knuckles vpwards & yo^{r} formuſt hand w^{t} yo^{r} knuckles dounwards & ther ſhaking yo^{r} pyke & faulſing at his face w^{t} yo^{r} poynt as Neere his face as you may, then ſodainlye Make out yo^{r} thruſt ſyngle handed at his face & fly backe w^{t}all, w^{ch} thruſt he can hardly breake one of 20 by reaſon y^{t} yō haue made yo^{r} ſpace ſo narrow vpon his gard, ſo y^{t} yō beinge firſt in yo^{r} action he wil ſtil be to late in his defence to defend himſelf.

4. but note while yō lye faulſinge to Deceve him looke well to yo^{r} leggs y^{t} he in the Meane tyme toſſe not vp the

poynt of his pyke ſyngle handed & hurt yō therwt in ye ſhynes.

Yf he lye ſo wt his poynt vp a loft as you do then 5. Make yor ſpace Narrow Mountinge yor point a lyttle & croſe his pyke wt yors & ſtronglye and ſodainly caſt his poynt out of the right lyne and thruſt whome from the ſame ſyngle or dubble as you fynd yor beſt aduantage, & fly out therwt.

Or yō may run in when yō haue caſt out his poynt ſlydinge both yor hands on yor ſtaf til yō com wtin iij quarters of a yard of the hed of yor pyke & ſtabb him therwt wt one hand & wt yor other hand kepe him of from ye grype.

Now yf he be a man of ſkyll, notwtſtandinge ye 6. Making of yt faulte in ſuffering you to do ſo yet this help he hath, as yō are cōmynge in he will ſodainlye draw in his pyke poynt & fly back wtall, then haue yō no helpe but to fly out inſtantly to the myddle of yor pyke & from thence backe to ye end & then are yō as at the firſt begynnynge of yor fyght yō were.

Yf you fynd yt he lye farr out of ye right lyne wt 7. his poynt or yt yō can ſo farr Indirect ye ſame then caſt yor pyke out of yor hands, croſe over vpon the myds of his pyke, by wch meanes yō ſhal entangle his pyke, then while he doth ſtryve to get his pyke at lybertye, run you in ſodainlye drawing yor Daggr & ſtrike or ſtabb at him.

Then yf he haue the prfection of this fyght as well 8. as you, he wilbe as reddy wt his daggr as yō are wt yors, then muſt yō fyght it out at the ſyngle daggr fyght as is ſhewed in the 15th Cap: then he yt hath not the prfection of yt fyght gowt to wracke.

And

9. And here note y^{t} in al the courſe of my teachinge of theſe my breef Inſtructions yf both the prtyes haue the ful prfection of y^{e} true fyght then the on will not be able to hurt thother at what prfyt weapon ſo euer.

10. But yf a Man y^{t} haue the prfection of fight ſhal fight w^{t} on y^{t} haue it not then muſt y^{t} vnſkylful man go to wrack & thother goe free.

Of the ſingle Dagger fyght againſt the lyke weapon.
Cap: 15.

1. FIRST know y^{t} to this weapon ther belongeth no Wards nor gryps but againſt ſuch a one as is foolehardy & will ſuffer himſelf to haue a ful ſtabb in the face or bodye to hazard the geving of Another, then againſt him yō may vſe yo^{r} left hand in throwinge him aſyde or ſtrike vp his heeles aft^{r} yō haue ſtab^{d} him.

2. In this dagg^{r} fyght, yō muſt vſe cōtynual motion ſo ſhal he not be able to put yō to y^{e} cloze or grype, becauſe yo^{r} contynuall motion diſappointeth him of his true place, & the more ferce he is in runynge in, the ſoon^{r} he gayneth you the place, wherby he is wounded, & yō not any thing the rather endangered.

3. The mann^{r} of handling yo^{r} cōtynuall motion is this, kepe out of diſtance & ſtrik or thruſt at his hand, Arme, face or body, y^{t} ſhal preſs vpon yō, & yf he defend blow or thruſt w^{t} his dagg^{r} make yō blow or thruſt at his hand.

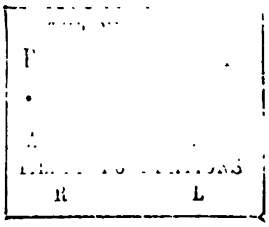

4. Yf he com in w^{t} his left legg forewards or w^{t} the right, do you ſtrike at y^{t} prte as ſoone as it ſhalbe w^{t}in yo^{r} reach, remembring y^{t} yō vſe contynual motion in

in yor prgreſſion & regreſſyon according to yor twyfold gournors.

Although the daggr fyght be thought a verye dan- 5.
gerous fyght by reaſon of ye ſhortnes & ſynglenes therof, yet the fight therof being handled as is aforeſaid, is as ſaf & as defencive as is the fight of any other weapon, this endeth my breef Inſtructions.

Finis.

if yt 20 at ye
1 push in to close hym
(yt grype at him
2 to act in, him instantly
(towards e strike him on
(yt end e fly out

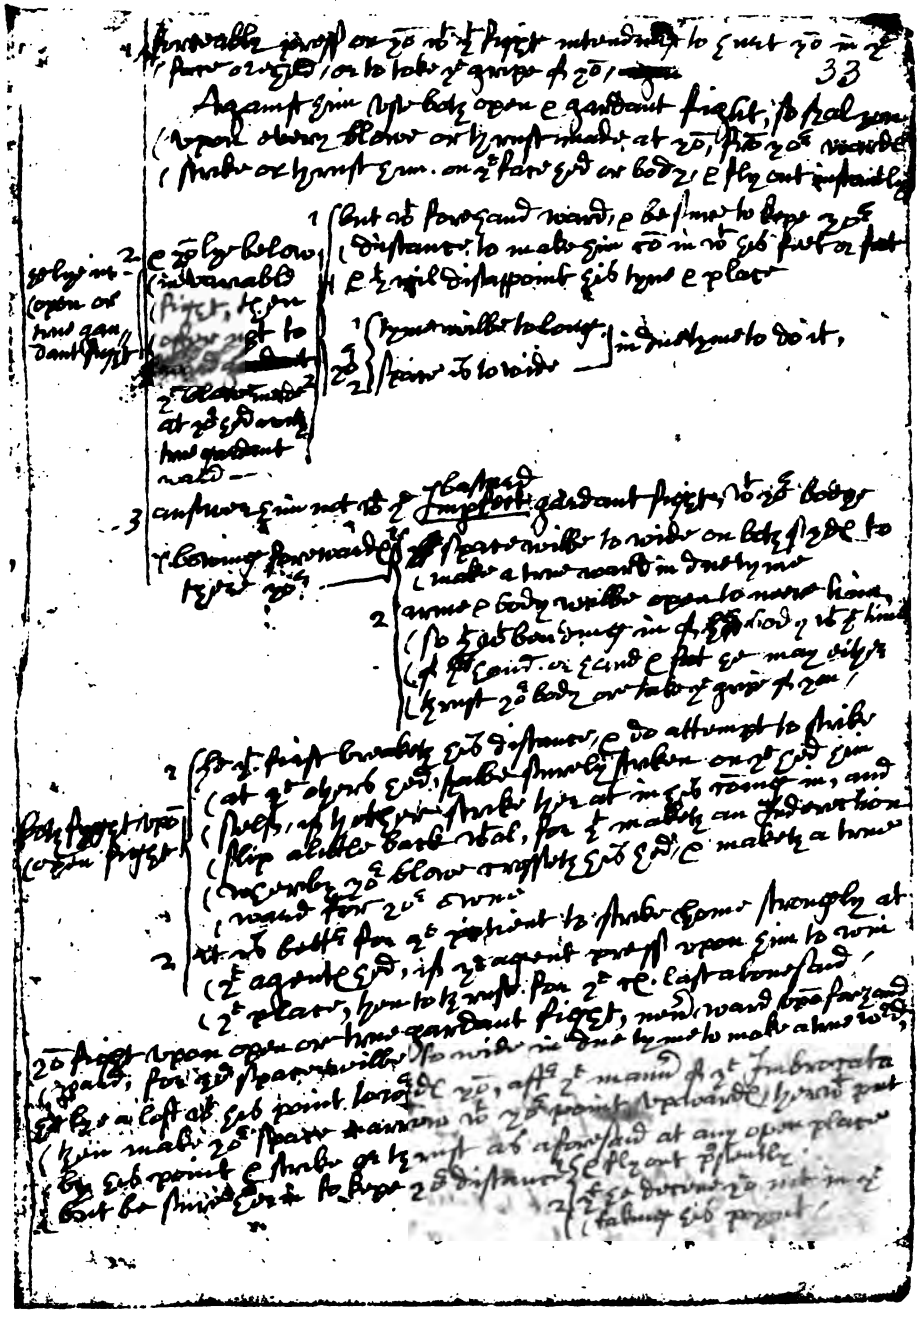

1 meant to point strt to yt of body
(he crack out to his towarde yt
(right hand e yt will turn
(ward yt right strt of to
(from wch to strike instantly his
(other
2 out of his right
(right, e fly back
(instantly on ye
(& round about

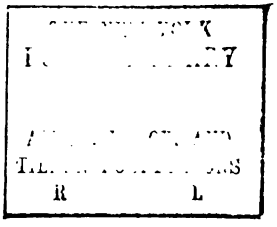

3 hid to hym below in variable fight, hurt at
(felt end or corner by overthrow to point
(wch to back towarde e fly out instantly

2 if he mist at to face or body, him beat at draw towarde wch to impede
(gardant, by reason to point through his to right, by his e strike
he strike him on ye end or hurt him in ye body e fly out instantly

Facſimile Table of "Open Fight" in the MS. of "Bref Inſtructions."

(Readjuſted on folding table following page 134.)

Sundry kinds of play or fight. *Thornborow.*

1 Uncrtaine variable
2 ſyngle
3 gardant.

iij different kinds of fight.

1 yt forceth or prſſeth on
2 he yt goeth back wt ſom blow or thruſt
3 he yt ſtandeth to his wards or paſſato

} wt an Imprfit ward & out of ye way.

1. Againſt him yt prſſeth ye, naked play is beſt becs he uſeth his foote, ye open lofty play ye hand.

2. ye 2nd is beſt followed wt ye variable & vncrtaine handling els ſhould yō be a marke to yor enemy & too ſlow in motion.

3. ye 3rd muſt be incountred wt ye gardant play wherin you ſhal try him at ye B ſword or how he can eſcape ye prting blow or thruſt.

When yō gather kepe yor place & ſpace equal & only be a patient & remembr yt ye gardant play bringeth yō ſafly in & keps yor enemy out.

Know this ordr of play els ye beſt may be deceaved, to be uſed againſt al theſe differencs & bring ye good-

nes therof in ſuſpitiō, for al theſe plaies are good in their kynd, tyme & occaſiō offered by divᵉſitie of play, but not on of them to be continually uſed & played vpon as a pᵉfectiō againſt euery aſſault.

1. In yᵉ naked play yō muſt ſet yoᵉſelf vpright wᵗ yoᵉ feet in a ſmale ſpace, obſᵉving yᵉ place of yoᵉ hand wher yō may ſtrike or thruſt moſt quickly & redely & ſo take yᵉ tyme of him yᵗ pᵉſſeth on (vſing yᵉ tyme of his feet) wᵗ yoᵉ blowe or thruſt wher he is moſt open.

1. In yᵉ variable play, yō dryve him to his ſhyfts changing yoᵉſelf into ſundry kynds of blowes thruſts & lyings, wᶜʰ yō muſt not ſtay upon,

2. ſeeking to + him ſtil in his playes as yō may, wherby yō ſhal force him to fly, or els to ſtand to yᵉ proof of his B ſword play.

3. the gardant play is to be vſed againſt yᵉ blowe, thruſt & paſſata yᵗ cometh wᵗin dangᵉ of hurt, for treading yᵉ right way & keping yoᵉ place & hand in ſpace & ſtrength you cannot looſe yᵉ tyme to defend frō either of thoſe offers.

theſe Judged of in reaſon & known by ſom practiſe wil make yō deale ſafly againſt al ſorts, ſkilful or vnſkilful, ſo yᵗ feare or Angᵉ hinder not yoᵉ Knowledge.

Of Tymes.

1. The tyme of yᵉ { hand / foote / hand & foot / foot & hand. naught }

Of

Of place ſpace. ſtrength & tyme.

1. y^e^ tyme of y^e^ hand is when yō ſtrike frō a w^rd^ or ſtand in place to ſtrike.

2. the tyme of y^e^ foot is when yō ſtep forward to ſtrike or when yō gather towarde yo^r^ own right ſyde.

3. y^e^ tyme of y^e^ hand & foot is when yō tread yo^r^ ground in courſe to ſtrike rather than p^r^ſſing forwards, or when yō ſlide back or go back, yo^r^ hand & foot being then of equal agillitie.

4. y^e^ tyme of y^e^ foot & hand is when yō handle yo^r^ gardant play vſing then a ſlowe motiō in both.

ther is but i good way to gather vpō yo^r^ enemy, gardant. Al other are dangerous & ſubiect to y^e^ blowe on y^e^ hed or thruſt on y^e^ body.

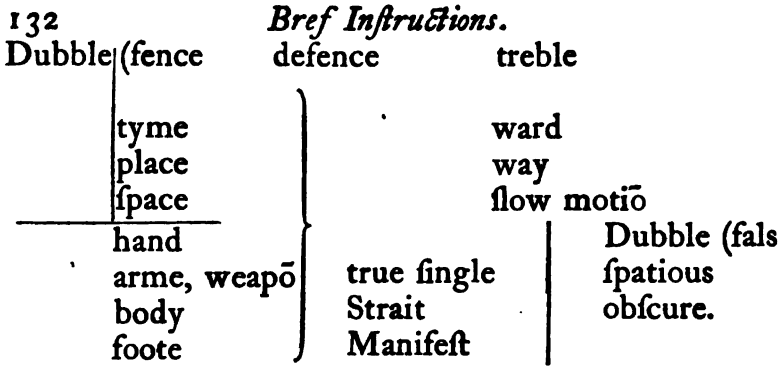

for no way can ward both but as aforſ^d^.

yo^r^ hand & feet in good play muſt go together, whether it be in quick or ſlow motion.

In gathering forwards or tow^rds^ yo^r^ right ſyde yo^r^ hand falleth frō yo^r^ place, ſpace, & ſtrength & ſo falleth out y^e^ loſs of tyme.

when yō gather & ſuffer y^t^ gou^r^ne yo^r^ fight, defend only. when yō do, be ſingle, or not fixed towards on any lying, but alſo y^e^ quicknes of yo^r^ hand in its p^r^p^r^ place carried,

In breaking y^e^ thruſt when yō lye aloft ſingle or gardant & ſpace yo^r^ arme ſomwhat bowing in warding y^e^ blowe, haue reſpect to yo^r^ place of hand & ſtrength, yo^r^ arme ſtrait. this courſe in yo^r^ tyme is beſt p^r^formed, the on of theſe w^t^ yo^r^ hand aloft yo^r^ point downe thother yo^r^ hand in place yo^r^ more high yo^r^ ſpace leſs curious.

II 93re tyme is cheefly to be obſrved in both actions vpō wch (place / ſpace) waiteth.

Upon theſe 3 ye 4 following, vpon theſe 4 ye firſt 3, upon theſe ye later 3.

to hurt or defend, a tyme in both is to be obſrved to ye furtherance of wch place is to be gotten, wtout wch tyme wilbe to long to prform yt wch is intended, ye ſpace is to be noted betwene ij oppoſits & in reſpect of touching, or in regard of ſaving as alſo for prſving of tyme, by ye ſmale way it hath either to ye body, or puting by ye weapon.

the next 4 muſt be vſed together to prforme thother iij rules, for ye hand being nymble & quick of itſelf may els be hindered in ye want of any of theſe, the weapon muſt be framed & inclyned to srve ye agilitie of ye hand eyther in hurting or defending.

4 □ the body vpright or leanyng to ye weapon, yt it hindr not ye diſpoſitiō of thother ij the foot anſwerable to them plying ye hand & ward al in ſtrait ſpace, ye wrd wt hand high wt ye point downe, the arme ſtrait out as redy for both actions.

the

the way vnd^{r} y^{e} wrd w^{t}drawing y^{e} body from harmes, the motiō ſlowe y^{t} y^{e} actiō of y^{e} hand be not hindered.

the reſt are y^{e} diſpoſitions of y^{e} placed diſplaced handlings

Slowfoot : ſwift hand : quick foot : ſlow hand.

tread : ſtride : follow : falaway :

When yō ſeek to offend w^{t} blow or thruſt, yo^{r} place of hand is loſt, y^{e} way to redeeme it is to ſlyde back vnd^{r} yo^{r} lofty ward as aforeſd alwaies y^{t} yo^{r} adu^{r}ſarie lye aloft redy to ſtrike or thruſt or vſe his hand only,

yf yō would offend him y^{t} lyeth lowe vpō y^{e} thruſt then when yō diſplace yo^{r} weapon frō aloft yō may aft^{r} yo^{r} blow at hed or arme or neereſt place, ſtand & thruſt before yō go backe becauſe he is out of place & ſpace & cannot +, & therby looſeth his tyme to annoy yō & yō may thruſt & retyre for a new aſſault.

this not ſo ſownd,

In ſtriking or thruſting neu^{r} hind^{r} yo^{r} hand w^{t} puting forth yo^{r} foote but kepe y^{e} place therof til yō haue offended w^{t} y^{e} one only y^{e} bending of yo^{r} body very little foreward may ſuffiċte, els yō looſe a dubble tyme, on in ſetting forth yo^{r} foot thother in recou^{r}ing yo^{r} loſt place of yo^{r} fōt both to y^{e} loſs of tyme & yo^{r} purpoſte.

Strike : thruſt : ward : breake :

the dubble offence is in ſtriking & thruſting.

the iij fold defence in { warding y^{e} blow / breaking or puting bye y^{e} thruſt / flyding back vnd^{r} yo^{r} hanging ward.

wyn y^{e} place : ſtand faſt, ſtrike home offend, defend, & go ſaf.

al vnd^{r} play is beaten w^{t} moſt agil, ſingle & y^{e} lofty the lofty w^{t} y^{e} gardant, His when w^{t} his foot he ſeeke y^{e} low lying is out of place to ofend defend or not ſo for lack of tyme ſpace & croſſing, yf he lye out w^{t} his long^{r} weapō it is put bye frō aloft, who hath place tyme & reach of body & arme al w^{t} y^{e} +. 93 re y^{e} reading y^{e} enterlyyinge of other things therto adioyning.

the lofty naked play is beaten w^{t} y^{e} ward becs of {Croſs / ſpace / tyme} to Defend, y^{e} lofty naked ſingle looſe play ſ^{r}veth to win y^{e} Tyme of y^{e} lowe & dubble play.

the bent gardant requireth yo^{r} arme ſtrait high & out y^{e} point down towards (93 re II wel) y^{e} body & foote y^{t} way inclyned.
